REPORT OF THE DEPARTMENT OF COMMERCE AND POLICE.

DEPARTMENT OF COMMERCE AND POLICE,
Manila, P. I., November 7, 1904.

SIRS: I have the honor to make the following report of the operations of the various bureaus of the department of commerce and police during the fiscal year ending June 30, 1904, and for the months of July and August, 1904:

BUREAU OF PHILIPPINES CONSTABULARY.

The Philippines Constabulary were increased from 275 officers and 6,774 enlisted men at the beginning of the fiscal year to 288 officers and 6,950 enlisted men at the close. The necessity and importance of this force are conclusively shown by the record of their performance during the year and by the fact that the American troops in the islands, numbering at the beginning of the fiscal year 18,000 men and occupying 79 posts, have been reduced to 12,000 men occupying 39 posts. Of the 50 companies of scouts, numbering 5,000 men, 31 companies were detailed to service under the chief of the Philippines Constabulary during the fiscal year and actively engaged in assisting in the maintenance of order. The present arrangement, however, is unsatisfactory in one respect. The scouts are under-officered, and as the law provides that they can only serve under the chief or assistant chiefs of the constabulary it is impossible to use the bulk of the officers of the Philippines Constabulary to supply the deficiency in the number of scout officers, thus creating a dearth of men who can command the scouts. This makes it impossible to divide the scouts up into small detachments, such as the peculiar needs of the service require. It is estimated that the efficiency of these troops could be increased 100 per cent if they were given the additional officers which the law has made provision for them to have. The value of native troops has passed wholly beyond the experimental stage and is demonstrated beyond question. The chief of the constabulary reports:

The service of the native troops has conclusively shown the wisdom of their creation. In the first place, they are efficient and relatively economical. In the second place, their organization, with the training and education they receive, materially aids in the development of the country. The experimental stage has passed.

The constabulary are to be congratulated upon having so far reduced the ladrones that it is now safe to travel practically throughout the archipelago. During the year the officials of all the departments of the government, including nearly 1,000 teachers, officers of the forestry bureau, mining bureau, bureau of agriculture, ethnological survey, provincial officers, supervisors and foremen in charge

of construction of roads, have traveled from end to end of the islands, penetrating regions hitherto unexplored and seeing people who have never before seen white men, and almost without exception have not been molested. Members of the Commission and other officials go freely everywhere unarmed and without guards. The activity of the constabulary has resulted in practically wiping out the curse of ladronism, which has done so much to render any real development of the islands impossible. They have hunted these scattered bands down, killed or captured the members, until now there are only a few of the old leaders left, and these skulk in the mountains with the weight of public opinion against them, many of the natives who used to help them now endeavoring to effect their capture and giving information of their whereabouts to the authorities, so that they hardly dare to sleep two nights in the same place. In the course of this work parties of constabulary have covered over 158,000 miles, as against 222,000 in the previous year. They have captured 706 fire-arms in 1904, as against 948, and it is believed that these captures have reduced the number of arms illegally held in the archipelago to such a point that there are at present outstanding not more than were captured in the last year. During the year they killed and wounded 570 outlaws, as against 1,185 in the previous year, and captured 1,364, as against 2,722. Their losses were 53 men and 2 officers killed this year, as against 78 men and 5 officers in the previous year. The loyalty of the men is demonstrated by the fact that there were but 52 desertions, as against 84 in the previous year, and considering that 23 of these were concerned in one mutiny, which was instigated by the return of the insurgent leader Ricarte, now serving a long term in Bilibid Prison, it can be seen that the percentage of desertions is so small that for all practical purposes it can be considered negligible.

For the purposes of administration the archipelago is divided into five constabulary districts. The first district, covering the provinces nearest Manila, is inhabited mostly by the Tagálogs, who have been the cause of most of the disturbances. This district has been under the very able command of Colonel Scott, whose enforced departure to the States on sick leave is very much regretted by the department. The whole district is in a condition of unprecedented tranquillity and, except for a handful of scattered outlaws, too hardly pressed by the constabulary to be able to gather any bands or to commit depredations, there are no disturbing elements to the peace of the community.

In the second district, comprising practically all of the south of Luzon, reports show everything more quiet than at any time in its history. The body of the outlaw Roldan and four of his companions were recently brought in by his own men for the reward offered by the government, thus removing the only disturbing element.

In the third district, comprising the Visayan Islands, the Pulajanes, who are religious fanatics, have recently become involved in an outbreak which extended through parts of Cebú, Leyte, and Samar. Bands of these people, armed with a few guns and many bolos, have kept in hiding in the mountains and have descended on the coast towns in different directions, burning a few houses and murdering a few people, mostly natives, and indiscriminately men, women, and children. The whole movement seems purposeless and is un-

doubtedly due to ignorance and superstition on the part of the men engaged in it. Several Americans, including one constabulary officer, have been killed, and a few enlisted men of the constabulary and scouts killed and wounded in addition during the months of July, August, and September, 1904. Additional companies of both constabulary and scouts have moved into the infected region and are pressing the Pulajanes very hard. The inhabitants of the coast towns seem to be loyal and inclined to help the troops in defending their towns against attacks. It is hoped in a short time to quell these disturbances, as there are already signs that the Pulajanes are tiring of it, and many captures have been made.

In the fourth district, comprising the provinces of northern Luzon, everything is reported quiet, except occasional disputes and small fights among the wild tribes. These difficulties have always existed.

In the fifth district, comprising the Moro provinces in Mindanao, the Americans have undertaken the advance of civilization among peoples who have never before been brought under modern rule. Indications are that the great island of Mindanao, with its immense potential wealth, will soon be as safe and available for development as any in the group.

The Commission, in its appropriation for the fiscal year 1905, has provided, for economical reasons, for a reduction of the constabulary force to 6,000 men, these reductions to take place gradually during the course of the year. This and the Pulajanes difficulties in the Visayan Islands have caused the civil governor to ask for seven additional companies of scouts, which have been assigned by the general commanding the Philippines Division to service under the chief of the constabulary, many of them being employed in Samar.

It frequently happens that where a Filipino is advanced to a position of authority that, until he becomes accustomed to the responsibilities of his office, he abuses his privileges. The enlisted natives need constant and rigorous supervision by competent officers to prevent their using their newly acquired authority to oppress the people they are supposed to serve.

There are occasional complaints in regard to abuses by the American officers, and these are given immediate and careful attention. Wherever any abuse is found to have been committed severe discipline is meted out to the offenders, but in most cases it is noticeable that the complaints come from the more lawless regions, and when investigated are likely to show that they emanated from people who are compelled to observe laws they wish to break and whose personal records are not above suspicion.

In general it can be said that the constabulary are a good, efficient organization, well officered, well manned, well drilled, and accomplishing in full measure the purpose for which they were organized.

INFORMATION DIVISION.

Under the operation of this division there have been 1,400 arrests of outlaws and other criminals. Eighty-one firearms have been captured. The natives have given ready, intelligent, and very valuable advice as detectives and secret-service agents, although there is great risk attached to this service, as shown by the fact that 6 out of a total rostrum of 118 of these officers were killed during the year.

REPORT OF THE DEPARTMENT OF COMMERCE AND POLICE.

DEPARTMENT OF COMMERCE AND POLICE,
Manila, P. I., November 7, 1904.

SIRS: I have the honor to make the following report of the operations of the various bureaus of the department of commerce and police during the fiscal year ending June 30, 1904, and for the months of July and August, 1904:

BUREAU OF PHILIPPINES CONSTABULARY.

The Philippines Constabulary were increased from 275 officers and 6,774 enlisted men at the beginning of the fiscal year to 288 officers and 6,950 enlisted men at the close. The necessity and importance of this force are conclusively shown by the record of their performance during the year and by the fact that the American troops in the islands, numbering at the beginning of the fiscal year 18,000 men and occupying 79 posts, have been reduced to 12,000 men occupying 39 posts. Of the 50 companies of scouts, numbering 5,000 men, 31 companies were detailed to service under the chief of the Philippines Constabulary during the fiscal year and actively engaged in assisting in the maintenance of order. The present arrangement, however, is unsatisfactory in one respect. The scouts are under-officered, and as the law provides that they can only serve under the chief or assistant chiefs of the constabulary it is impossible to use the bulk of the officers of the Philippines Constabulary to supply the deficiency in the number of scout officers, thus creating a dearth of men who can command the scouts. This makes it impossible to divide the scouts up into small detachments, such as the peculiar needs of the service require. It is estimated that the efficiency of these troops could be increased 100 per cent if they were given the additional officers which the law has made provision for them to have. The value of native troops has passed wholly beyond the experimental stage and is demonstrated beyond question. The chief of the constabulary reports:

The service of the native troops has conclusively shown the wisdom of their creation. In the first place, they are efficient and relatively economical. In the second place, their organization, with the training and education they receive, materially aids in the development of the country. The experimental stage has passed.

The constabulary are to be congratulated upon having so far reduced the ladrones that it is now safe to travel practically throughout the archipelago. During the year the officials of all the departments of the government, including nearly 1,000 teachers, officers of the forestry bureau, mining bureau, bureau of agriculture, ethnological survey, provincial officers, supervisors and foremen in charge

1

doubtedly due to ignorance and superstition on the part of the men engaged in it. Several Americans, including one constabulary officer, have been killed, and a few enlisted men of the constabulary and scouts killed and wounded in addition during the months of July, August, and September, 1904. Additional companies of both constabulary and scouts have moved into the infected region and are pressing the Pulajanes very hard. The inhabitants of the coast towns seem to be loyal and inclined to help the troops in defending their towns against attacks. It is hoped in a short time to quell these disturbances, as there are already signs that the Pulajanes are tiring of it, and many captures have been made.

In the fourth district, comprising the provinces of northern Luzon, everything is reported quiet, except occasional disputes and small fights among the wild tribes. These difficulties have always existed.

In the fifth district, comprising the Moro provinces in Mindanao, the Americans have undertaken the advance of civilization among peoples who have never before been brought under modern rule. Indications are that the great island of Mindanao, with its immense potential wealth, will soon be as safe and available for development as any in the group.

The Commission, in its appropriation for the fiscal year 1905, has provided, for economical reasons, for a reduction of the constabulary force to 6,000 men, these reductions to take place gradually during the course of the year. This and the Pulajanes difficulties in the Visayan Islands have caused the civil governor to ask for seven additional companies of scouts, which have been assigned by the general commanding the Philippines Division to service under the chief of the constabulary, many of them being employed in Samar.

It frequently happens that where a Filipino is advanced to a position of authority that, until he becomes accustomed to the responsibilities of his office, he abuses his privileges. The enlisted natives need constant and rigorous supervision by competent officers to prevent their using their newly acquired authority to oppress the people they are supposed to serve.

There are occasional complaints in regard to abuses by the American officers, and these are given immediate and careful attention. Wherever any abuse is found to have been committed severe discipline is meted out to the offenders, but in most cases it is noticeable that the complaints come from the more lawless regions, and when investigated are likely to show that they emanated from people who are compelled to observe laws they wish to break and whose personal records are not above suspicion.

In general it can be said that the constabulary are a good, efficient organization, well officered, well manned, well drilled, and accomplishing in full measure the purpose for which they were organized.

INFORMATION DIVISION.

Under the operation of this division there have been 1,400 arrests of outlaws and other criminals. Eighty-one firearms have been captured. The natives have given ready, intelligent, and very valuable advice as detectives and secret-service agents, although there is great risk attached to this service, as shown by the fact that 6 out of a total rostrum of 118 of these officers were killed during the year.

of construction of roads, have traveled from end to end of the islands, penetrating regions hitherto unexplored and seeing people who have never before seen white men, and almost without exception have not been molested. Members of the Commission and other officials go freely everywhere unarmed and without guards. The activity of the constabulary has resulted in practically wiping out the curse of ladronism, which has done so much to render any real development of the islands impossible. They have hunted these scattered bands down, killed or captured the members, until now there are only a few of the old leaders left, and these skulk in the mountains with the weight of public opinion against them, many of the natives who used to help them now endeavoring to effect their capture and giving information of their whereabouts to the authorities, so that they hardly dare to sleep two nights in the same place. In the course of this work parties of constabulary have covered over 158,000 miles, as against 222,000 in the previous year. They have captured 706 fire-arms in 1904, as against 948, and it is believed that these captures have reduced the number of arms illegally held in the archipelago to such a point that there are at present outstanding not more than were captured in the last year. During the year they killed and wounded 570 outlaws, as against 1,185 in the previous year, and captured 1,364, as against 2,722. Their losses were 53 men and 2 officers killed this year, as against 78 men and 5 officers in the previous year. The loyalty of the men is demonstrated by the fact that there were but 52 desertions, as against 84 in the previous year, and considering that 23 of these were concerned in one mutiny, which was instigated by the return of the insurgent leader Ricarte, now serving a long term in Bilibid Prison, it can be seen that the percentage of desertions is so small that for all practical purposes it can be considered negligible.

For the purposes of administration the archipelago is divided into five constabulary districts. The first district, covering the provinces nearest Manila, is inhabited mostly by the Tagálogs, who have been the cause of most of the disturbances. This district has been under the very able command of Colonel Scott, whose enforced departure to the States on sick leave is very much regretted by the department. The whole district is in a condition of unprecedented tranquillity and, except for a handful of scattered outlaws, too hardly pressed by the constabulary to be able to gather any bands or to commit depredations, there are no disturbing elements to the peace of the community.

In the second district, comprising practically all of the south of Luzon, reports show everything more quiet than at any time in its history. The body of the outlaw Roldan and four of his companions were recently brought in by his own men for the reward offered by the government, thus removing the only disturbing element.

In the third district, comprising the Visayan Islands, the Pula-janes, who are religious fanatics, have recently become involved in an outbreak which extended through parts of Cebú, Leyte, and Samar. Bands of these people, armed with a few guns and many bolos, have kept in hiding in the mountains and have descended on the coast towns in different directions, burning a few houses and murdering a few people, mostly natives, and indiscriminately men, women, and children. The whole movement seems purposeless and is un-

doubtedly due to ignorance and superstition on the part of the men engaged in it. Several Americans, including one constabulary officer, have been killed, and a few enlisted men of the constabulary and scouts killed and wounded in addition during the months of July, August, and September, 1904. Additional companies of both constabulary and scouts have moved into the infected region and are pressing the Pulajanes very hard. The inhabitants of the coast towns seem to be loyal and inclined to help the troops in defending their towns against attacks. It is hoped in a short time to quell these disturbances, as there are already signs that the Pulajanes are tiring of it, and many captures have been made.

In the fourth district, comprising the provinces of northern Luzon, everything is reported quiet, except occasional disputes and small fights among the wild tribes. These difficulties have always existed.

In the fifth district, comprising the Moro provinces in Mindanao, the Americans have undertaken the advance of civilization among peoples who have never before been brought under modern rule. Indications are that the great island of Mindanao, with its immense potential wealth, will soon be as safe and available for development as any in the group.

The Commission, in its appropriation for the fiscal year 1905, has provided, for economical reasons, for a reduction of the constabulary force to 6,000 men, these reductions to take place gradually during the course of the year. This and the Pulajanes difficulties in the Visayan Islands have caused the civil governor to ask for seven additional companies of scouts, which have been assigned by the general commanding the Philippines Division to service under the chief of the constabulary, many of them being employed in Samar.

It frequently happens that where a Filipino is advanced to a position of authority that, until he becomes accustomed to the responsibilities of his office, he abuses his privileges. The enlisted natives need constant and rigorous supervision by competent officers to prevent their using their newly acquired authority to oppress the people they are supposed to serve.

There are occasional complaints in regard to abuses by the American officers, and these are given immediate and careful attention. Wherever any abuse is found to have been committed severe discipline is meted out to the offenders, but in most cases it is noticeable that the complaints come from the more lawless regions, and when investigated are likely to show that they emanated from people who are compelled to observe laws they wish to break and whose personal records are not above suspicion.

In general it can be said that the constabulary are a good, efficient organization, well officered, well manned, well drilled, and accomplishing in full measure the purpose for which they were organized.

INFORMATION DIVISION.

Under the operation of this division there have been 1,400 arrests of outlaws and other criminals. Eighty-one firearms have been captured. The natives have given ready, intelligent, and very valuable advice as detectives and secret-service agents, although there is great risk attached to this service, as shown by the fact that 6 out of a total rostrum of 118 of these officers were killed during the year.

TELEGRAPH DIVISION.

The telegraph division is now operated jointly by the insular and the United States Government. The tendency has been for the United States Government to turn over to the constabulary the duty of caring for this service. This fact will account in part for the large increase of miles of telegraph from 505 to 2,037 operated by the telegraph division of the constabulary during the year. The miles of telephone also increased from 1,871 to 2,213; the cable from 85 to 163 miles; telegraph offices have increased from 23 to 60, and the telephones in use from 155 to 350 outside of the city of Manila. Seven hundred and seventy-seven miles of new construction were completed, iron poles being largely used. The short life of wooden poles in this climate makes these almost a necessity. The United States Signal Corps operates, in addition, 1,351 miles of telegraph, 1,460 miles of cable, and 398 miles of telephone in the archipelago.

MEDICAL DIVISION.

The constabulary supports 7 hospitals and 2 wards, aggregating 200 beds. Thirteen hundred and thirty-two cases were treated, with a mortality of only 26. The superintendent of the division states that the native soldier is quick to learn the duties required by the Hospital Corps, and that only one instance has ever been brought to his attention where a native has not exceeded reasonable expectations.

ORDNANCE DEPARTMENT.

All the firearms in the islands not in the hands of the military and the constabulary are registered in the ordnance department. Those in the hands of individuals are covered by licenses issued by the constabulary or by the provincial governments, under bond, to be forfeited to the government in case the arms are lost. The total number of permits outstanding, of all kinds, is now 4,749.

For additional information and details in regard to the operations of this bureau attention is called to the annual report for the fiscal year, submitted by Brig. Gen. Henry T. Allen, and supplemental report covering the period from July 1 to September 22; also reports to him of the officers commanding the five constabulary districts and of the chief supply officer.

BUREAU OF COAST GUARD AND TRANSPORTATION.

This bureau is now operating 17 steamers, 6 seagoing launches, 1 river steamer, 6 river and harbor launches, and 1 sailing sloop. The coast-guard cutters, as the steamers are called, are kept continually in use, and perform excellent service in providing transportation for government officials, carrying supplies, expediting and rendering possible the movement of the various government agents to the less accessible parts of the archipelago. There are now 11 routes upon which regular trips are made, 5 of which have headquarters at Manila. During the fiscal year ending June 30, 1904, the various steamers and launches of the coast-guard service traveled over 350,000 miles, visited over 4,000 ports, carried over 15,000 passengers, and over 5,000 tons of freight,

including 5,000,000 pesos in cash. Attention is called to the report of the cruiser *Tablas*, used to prevent smuggling into the Moro Islands. On one occasion the sailors from the coast guard landed to help the constabulary against the ladrones in Samar.

There has been some complaint made by the owners of the merchant steamers that the large use of government ships takes so much of the business as to make it impossible for them to operate at a profit. With a view to considering this point, the civil governor has appointed a committee to consider all questions of island and interisland transportation, and determine, among other important questions, whether it would be advisable to take off the boats belonging to the insular government from the main avenues of commerce and turn the government business over to the commercial lines. This committee is now at work on the problem. It has been the effort of the government to prevent the use of the coast-guard vessels from interfering with the business of the commercial lines in carrying any passengers and freight other than those incident to the government service.

LIGHT-HOUSES.

At the beginning of the fiscal year 61 lights were in operation, including 15 flashing lights, 5 fixed lights, and 41 minor lights. At the end of the fiscal year 15 new lights had been put in operation, bringing the total up to 76, including 19 flashing lights, 3 fixed lights, and 54 minor lights. The Spanish Government had made plans for a very comprehensive system of lights, and many of them were in course of construction at the time of American occupation. The insurgents, apparently not alive to the importance of aids to navigation, rather ruthlessly despoiled the light-houses of their machinery, and the equipment of the light-houses has been gathered sometimes from great distances and at considerable expense, until the system is now in a fair way to become adequate. Many of the partly constructed Spanish light-houses are now nearing completion under American supervision, and the Commission has appropriated money for several much-needed new light-houses, to be ready as soon as the construction can be completed. Lack of funds has prevented the Government from undertaking some much-needed new construction which will render navigation much more certain.

ENGINEER ISLAND.

Engineer Island, situated on the south side of the mouth of the Pasig River, was set aside for the use of the bureau of coast guard and transportation by act of the Commission, in June, 1903. The act authorized the construction of shops, a marine railway, and other facilities for handling the business of the bureau. This work is now nearing completion. The building for the machine shops is about completed, and the machinery will soon be in place. The marine railway, contract for which was let in February, 1904, is in process of construction and will undoubtedly be ready in December of this year, the time called for in the contract.

For additional information and details attention is called to the attached report for the fiscal year, submitted by Commander J. M.

Helm, chief of the bureau of coast guard and transportation; also, supplemental reports for the months of July and August, 1904, and reports of the light-house engineer, light-house inspector, marine superintendent, and paymaster.

BUREAU OF ENGINEERING.

The work of this bureau has been constant and increasing, and it is certain that with the development of the resources and growth of the commerce of the islands its field will assume greater and greater proportions. The work is classified into a division of records, division of surveys, division of construction, division of drafting, division of provincial supervisors, and division of railroads. The chief of the bureau recommends the creation of a division of irrigation and a division of geography. The former officer could well devote all his time to improvements of rivers and waterworks and the maintenance of existing systems of irrigation, which, from lack of proper attention, are suffered to deteriorate; and the latter is urgently needed to supply a suitable map of the islands and collate all the information which is being brought in from various sources, which show inaccuracies in the existing maps to a degree that makes them unreliable for many practical purposes.

A general review of the work of the bureau brings into prominence some extremely interesting facts. During the year the insular government has engaged in the construction of 274 miles of new road, of which part is completed and part still remains unfinished. The money for these has been appropriated principally out of the Congressional relief fund. The bureau has completed surveys and made recommendations in regard to 157 miles of additional road.

The development of roads is probably the most important step in the development of the commerce of the islands. The Spaniards made a practice of diverting to other uses money raised for the maintenance and repair of roads, and thus it seldom accomplished its real purpose. Practically the only work which was done on the roads came from compulsory labor under the laws which then obtained. At present, during the rainy season, the narrow-tired bull carts, following one another in a single rut, wear even the best road through, making them a series of quagmires through which the bulls toil up to their knees in the mud and dragging the carts, whose wheels are submerged to the axle. This necessitates very light loads if the carts are to get through and renders any extensive movement of products or merchandise impossible.

The two main objects to be served by the development of roads are: First, military, and second, commercial. With the advent of good roads comes the advent of peace, for in the presence of quick transportation the ladrone moves out, and until the ladrone has gone industry can not begin. The practical extinction of the ladrone brings the commercial use of the road into first place. It is necessary that the main avenues of commerce should be made passable. It seems, therefore, that the time has come for the government to change its policy and direct its energies and revenue, both provincial and insular, toward putting the existing roads in permanent serviceable condition. This can be done at a much less cost per mile than in construction of new roads and will render much greater service per

mile, and still more per dollar expended, than any new road could reasonably be expected to do. Every year the roads which are not kept up deteriorate, and it is better that the provincial revenues should be expended in keeping good roads in good repair than in making bad roads temporarily passable.

In this connection the report of the chief of supervisors is full of interest. It shows that in the aggregate the provinces completed 252 miles of new road, at a cost of about 300,000 pesos, and repaired 1,662 miles of old road, at an aggregate expense of about 400,000 pesos. There were 582 bridges and culverts built and 458 repaired. The labor, of course, was principally Filipino, and the report shows the equivalent of 1,545,801 single days' work having been done during the year. The Commission has enacted a law prohibiting the use of the narrow-tired bull cart. This law is absolutely necessary if the good roads which have been constructed and the repairs made on the old roads are to be of any permanent value. It is a very difficult matter to enforce the law, as the price of the new wheels is high, and it is difficult to compel the native to buy them, as he does not have the money. Experiments are being made in Bilibid prison looking to a reduction in the cost of this construction, and figures will soon be obtainable. It is hoped that some device may be reached which will put the right kind of wheel and axle within reach of everybody.

Next to development of roads, the improvement of the harbors of the islands merits the attention of the Commission. The approaching completion of the port works of Manila will make a demand for good harbors in the other principal ports of the islands immediate and urgent. To meet this the Commission has authorized the construction of improvements in Iloilo and Cebu, for which contracts have been let, involving about \$500,000 gold for Cebu and \$250,000 gold for Iloilo. These works will be started immediately, and it is anticipated that the Iloilo works will be finished in about thirteen months from date. Cebu will take nearly a year longer.

It is hoped that as soon as funds become available which can be devoted to harbor improvements the Commission will turn their attention to the most needed unimproved harbors and complete them in order of their importance, with a view to enabling ships to load and unload at wharves provided with adequate warehouses and save the annoyance, risk, and expense incident to lighterage. In this connection the chief of the bureau of engineering says:

Practically all of the harbors are lacking proper wharfing facilities. Vessels necessarily anchor about 1 mile from shore, and lighterage is accomplished by cascoes, from which the goods are packed to the beach by men or carabao carts, which are driven as far as possible into the surf. The resulting expense in the discharge or shipment of cargoes is large, and considerable damage to the goods is incurred.

The large number of rivers navigable for vessels of light draft present a system of communication of extraordinary promise to the development of the islands, and it is estimated that a single dredger operating continuously on the various bars which obstruct the mouths of all these rivers would render a great service to the coastwise trade at a comparatively small expense.

Some of the rivers of these islands present features worthy of note. The heavy rainfall and precipitous watersheds present a condition

that brings about floods, and many of these rivers are known to rise 20 or 30 feet in the course of a few hours, causing very severe damage to property and often menace to life. The Commission has received from various provinces petitions to have controlling works undertaken to prevent fertile lands or fine buildings from being destroyed. Such work usually involves extremely expensive construction, often in excess of the market value of the property to be saved, and it has been impossible to undertake this work for lack of funds.

The bureau has investigated several water powers during the year, and it is hoped that the high price of coal may be offset in some measure by development of water power. It is common practice in the United States to carry large amounts of power distances ranging from 30 to 150 miles, and there is reason to believe that within reach of Manila there is more than one good water power the development of which will materially decrease the cost of power in the city. It is by no means certain that electric power is not the proper motive power for the railroads of these islands, and this feature lends great importance to these investigations.

Appended to the report of the bureau of engineering, under the division of railroads, is a very complete statement of the business of the Manila and Dagupan Railroad. The most noticeable feature in this is the enormous increase in the third-class passenger business, which is carried to a point far in excess of anything in the previous history of the railroad.

The demand for additional railroads is constant, pressing, and insistent, and comes from all classes and many directions. The existing railroad company has applied for a franchise to extend its line in several directions and build new lines in others. Many other applications for franchises have been received. All action in this matter is withheld, pending decision by Congress upon the bill authorizing the Commission to guarantee interest upon the construction of new railroads. It is hoped that the company or companies which obtain the privilege of building in the most populous districts where the largest business may be reached will be induced by means of a government guaranty to build through some of the less populous regions, thus serving the double purpose of developing the resources of the regions now out of reach and bringing the fertile and populous regions beyond into closer communication with Manila. It is very desirable to have a railroad from Manila to the fertile and populous province of Batangas, and it is hoped that such a road could be extended so as to reach the rich and populous hemp districts at the southern part of Luzon. Another district of Luzon which it is very desirable should be brought within reach of Manila is the great and fertile valley of the Cagayan River, with its immense potential wealth and proved fertility. It is also desirable that the west coast of Luzon, from Dagupan to Vigan, and perhaps Laoag, be reached by railroad.

During the year this bureau has completed surveys of the so-called "friar lands" agreements for the purchase of which have been entered into by the government. This work was complicated by the fact that the title submitted did not have accurate plans and boundary marks in every case, and the title to the land in question involved a good many questions of ownership.

For additional information and details attention is called to annual report of Mr. J. W. Beardsley, consulting engineer to the Commission,

for the fiscal year, and supplementary report for July and August of 1904, to which are attached reports of the railroad engineer and of the chief of supervisors.

BUREAU OF POSTS.

During the year the business of the post-offices showed a steady growth, the number of post-offices having increased from 213 at the beginning of the fiscal year to 3,191 at the close. As very few of these additional post-offices are self-supporting, it is the policy of the Commission to go slow and not increase the number of post-offices further at present. They have limited the number to be established during the present fiscal year so as not to exceed a total of 450 post-offices in the aggregate. This step was taken purely in the interest of economy.

The post-office in Manila is now moved into its new location in the Cuartel Fortin Building, which gives better space and more than double the facilities of its previous site, but at best can be regarded as a temporary expedient.

Too large a proportion of the mail is carried under official frank, and is not revenue producing. It may be necessary to take measures to protect the government from improper use of the mails in this way.

Regulations are now in force providing that United States stamps not countersigned with the word "Philippines" are not accepted in Philippine post-offices, and stamps so countersigned are not accepted in United States post-offices. This change was reported to have worked little hardship.

Plans are being prepared for an issue of distinctive stamps of the Philippine Islands. The money-order business in operation at 33 offices at the beginning of the fiscal year has been increased by 30 additional offices and is now in operation at the capital city of each province. It is used largely for remittances of money to the United States, and the business continues to grow.

The director of posts speaks very favorably of the result of his employing Filipinos, and he reports that he has now 102 Americans and 287 Filipino postmasters, and 72 American and 84 Filipino clerks. This is a great increase in the proportionate number of Filipinos employed the preceding year, and is very gratifying. Some improvement has been made in the transportation during the year, both as regards regularity and frequency. Much of this is due to the establishment of coast guard routes and the service given by the army transports. It is hoped that arrangements may be completed by which this business will be done more and more by commercial lines.

For additional information and details attention is invited to annual report for the fiscal year submitted by Mr. C. M. Cotterman, director of posts.

BUREAU OF PRISONS.

The Commission has ruled that wherever prisoners are sentenced for more than two years in any of the provinces they shall be transferred from the provincial jail to Bilibid. Under the operation of this rule, aided by the vigilance and activity of the constabulary

in hunting down ladrones, the prisoners increased from 2,776 at the beginning of the fiscal year to 4,318 prisoners at the end, an increase of 55 per cent. This has filled up Bilibid to an extent not contemplated at the time of its construction. It is not anticipated that any such increase will occur in the present fiscal year, because the transfers from the provincial jails have been completed and the operations of the constabulary have reduced the number of outlaws outstanding to a comparatively few individuals, very small in number and adept in the art of concealment.

During the year the cost for maintenance per capita of prisoners was 33½ centavos per day, or less than 17 cents gold. This takes no account of receipts from sales of manufactured articles. The prison is engaged in the manufacture of carriages, clothing for their own use, laundry, furniture, and a few specialties, but these operations have not yet developed to a point where they give anything like an adequate return for the amount of potential labor. An effort will be made to give employment to the prisoners in such a way as to educate as many as possible in some trade that will be useful to them after their release and at the same time help maintain them while in confinement. The opening of the extensive carpenter shops nearing completion will tend to bring about this result. The business of making wide-tired wheels for the provinces is one which might prove very advantageous both to the prison and to the provinces. The government has been very careful not to have prison labor compete with legitimate business enterprises in the open market. It is hoped that this policy will not be carried so far as to prevent the prison from becoming more nearly self-supporting.

The rapid increase in the prison population has necessitated several additional buildings to provide accommodation, and this work has been done mostly by prison labor.

The discipline of the prison is good, and the health as good as could be expected where there has been such overcrowding of quarters as has been necessary pending completion of the new. Additional hospital facilities and more sleeping space are necessities if the health of the prisoners is to be preserved. It is noticeable that with the substitution of bread for rice in the native rations beriberi has almost disappeared. Considering the calls that have been made on it during the last year, the prison has been carried on in a high state of efficiency, and it speaks well for the corps of officers. The fine physique of the long-term prisoners, who have thrived under the regular life and good food accorded them, is in sharp contrast to the appearance of the short-term prisoners, who present the more emaciated appearance, which is characteristic of the Filipino of the lower classes.

For additional information and details attention is invited to annual report of Mr. M. L. Stewart, acting warden, and his supplemental report for the months of July and August, 1904, to which are attached reports of the resident physician and of the chaplain.

BENGUET IMPROVEMENTS.

The construction of the Benguet road is being pushed rapidly to completion. Col. L. W. V. Kennon, the officer in charge, has proved himself capable of surmounting the many obstacles which present

themselves, and is completing a road of easy grades, few curves, and of a permanent nature. The roadbed can readily be adapted for an electric railway whenever the time comes for the construction of such a road, although it will require a good deal of expensive bridging to prepare the road for the railroad. The canyon is narrow and winding, the rocks on either side precipitous, and the material of which the rocks are composed and their nature are such that it was found necessary to strip the hillsides sometimes for several hundred feet in height in order to make sure that the material above would not slide down, thus rendering travel dangerous. There are now over 3,000 men at work, and it is estimated that the road will be finished during this fiscal year. The bridges—wherever it seemed wise to complete the permanent construction—and culverts are of cement, as wood was found to rot too rapidly to be safe. The highest grade is 9 per cent, and the sharpest curve 80 feet in radius. While a very small part of the whole is actually finished at the present time, the bulk of the work is done, the finishing touches being very easily put on by a gang of finishers. In the difficult and dangerous work it is found that the white men are the most efficient, the full-blooded negro next, while nearly a thousand Japanese are employed and are giving very good service in the other difficult parts of the work. Filipino laborers, of whom there are over a thousand now employed on the road, have to be educated very gradually up to this sort of thing, but there is one body of Tagalogs who have attained great skill and have proved themselves to be very serviceable workers, having been a long time with the road. Colonel Kennon speaks highly of their work.

NAGUILIAN.

Nothing further is being done toward the completion of the road to Benguet from San Fernando known as the "Naguilian Trail." It is passable for horses.

BENGUET.

The Commission has had plans prepared providing for the creation of a township consisting of 6,866 acres, to take in the whole of the available country around the proposed site of the new town of Baguio. At present the buildings in Baguio consist of a sanitarium that has 48 beds, a number of cottages of cheap construction, and a few other buildings for prison purposes, constabulary barracks, provincial headquarters, etc.

With the completion of the road it is hoped that the advantages of this temperate climate will be placed within the means of Government officials and men in civil life who are living in Manila on small salaries and can not afford the time and expense to go to Japan, China, or the United States.

The Commission is fortunate in having secured the services of Mr. D. H. Burnham, of Chicago, who will lay out the plans for the permanent improvements and arrangements of the public buildings, streets, etc., with a view of having everything upon the most improved lines.

For additional information and details attention is invited to report of Col. L. W. V. Kennon, officer in charge, Improvements in

Benguet Province, for the fiscal year, and to the supplemental report covering the two months of July and August, 1904. Also to reports of the disbursing officer, property officer, commissary officer, medical officer, and chief engineer.

BUREAU OF COAST AND GEODETIC SURVEY.

The work of this bureau has been systematically and regularly pursued during the year. The steamers *Pathfinder* and *Research* have been in continuous operation except for such times as they have had to be laid off for repairs, and the new steamer *Fathomer* is nearing completion in Hongkong and will be put into commission as soon as ready.

The nautical information division has prepared bulletins entitled "Notices to Mariners" and "Sailing Directions," wherein all changes of buoys, lights, etc., discoveries of uncharted rocks and other menaces to navigation are reported as promptly as practicable. The chief of the bureau reports that "the work of the native draftsmen is surprisingly excellent, and their service worthy of very great praise."

The attached report shows 30 topographic and 33 hydrographic sheets inked, and 20 new charts completed since the last reports, and about as many more nearing completion. The bureau reports over 4,000 charts distributed for official use or disposed of by sale during the fiscal year.

Much has been accomplished by this bureau, but more remains to be done. The archipelago has a coast line more than double that of the United States, and not more than 10 per cent of this has been adequately charted. The exact geographical situation of a great portion of the east coast of the islands has never been determined, and there has been considerable uncertainty in regard to many other points. With the opening of the Pacific cable the exact longitude of Manila has been determined from San Francisco during the year, and several other points hitherto in doubt have been cleared up. The bureau will compile data from which it will eventually plot an accurate coast line. In two cases the actual surveys show a discrepancy of nearly 4 miles over the previous reports. Accurate tidal observations are being made and valuable records obtained. The work of this bureau is of the utmost importance to navigation and will be forwarded continuously just so fast as the means of the government will allow, especial attention being devoted to the main avenues of commerce.

For additional information and details attention is called to annual report submitted by Mr. John E. McGrath, assistant in charge of bureau.

TELEPHONES.

The situation in regard to telephones, telegraph, and cable service is very mixed, and would be much bettered if some arrangement for centralization could be put in operation. There are several telephone systems operating in Manila, none of them satisfactory. The instruments are old-fashioned and not adequate to the needs of the service, and a practically complete new installation is necessary if good service is to be obtained. It is to be hoped that some means will be found to this end.

HARBOR LINES COMMISSION.

Under authority granted by Act No. 592 a commission has been appointed, consisting of the consulting engineer to the Commission, as provided by the law, the chief of the bureau of coast guard and transportation, and the officer in charge of the port works of Manila, whose duty it is to make recommendations in regard to the establishment of permanent harbor lines in such ports as they shall be requested to consider. The ports of Manila, Iloilo, Cebu, and Nueva Caceres have been submitted to them for recommendation.

Respectfully submitted.

W. CAMERON FORBES,
Secretary of Commerce and Police.

The PHILIPPINE COMMISSION, *Manila, P. I.*

APPENDIXES.

ANNUAL REPORT OF BRIG. GEN. HENRY T. ALLEN, U. S. ARMY, CHIEF PHILIPPINES CONSTABULARY.

SIR: The undersigned has the honor to submit the following report of the operations of constabulary and scouts for the fiscal year ending June 30, 1904:

Since last report Capt. J. G. Harbord, U. S. Cavalry, has been appointed assistant chief, August 21, 1903, with the temporary rank of colonel, United States Army, and put in charge of the fifth constabulary district, comprising the Moro Province (excepting the Paraguan group, which remains in the third district), to which the organized provinces of Surigao and Misamis, taken from third district, were added. As to area, this district is larger than any other.

By virtue of authority of the Secretary of War, conveyed by cable under dates of March 31 and April 2, respectively, Capts. W. C. Rivers, First U. S. Cavalry, and A. L. Dade, Thirteenth U. S. Cavalry, were assigned to duty with the civil governor and were designated, respectively, as adjutant-general and inspector-general of Philippines Constabulary.

These three officers have taken up their work with zeal and intelligence and beneficial results are in progress. The services of the latter two will also permit assistant chiefs who have served several years without leave to profit by a visit to the States.

At the date of this report 31 companies of scouts are doing duty with the civil government. With the exception of two companies serving in the Ilocos provinces, these companies are in the first and second districts, where the population is chiefly Tagalog.

The work during the year has been largely a repetition of that of the preceding year, with the difference that the marauding bands have been much fewer in number and smaller in size, with corresponding diminution in disturbances. A gradual but sure conviction that their best interests lie with the government rather than with self-appointed leaders has dawned upon all Filipinos above the average intelligence. To bring conviction to numerous remote tribes, some of whom have scarcely seen a white man and who are at enmity with all their neighbors, and to people who are fanatical and ignorant of the outside world almost beyond belief, will require much time and patience, as well as liberal instruction by practical methods.

Under the operations of the courts, professional agitators have been largely squelched, and the efforts of their minions in many cases have not met with success even among the ignorant. Practically every province has its mountain population, which has been driven into the fastnesses of the mountains and oppressed by the lowlanders from

earliest times. These people have come to regard all outsiders as enemies, and from time to time they organize bands under some religious craze and begin their marauding expeditions. The pulajanes (red-trousered men) are such.

In spite of the disturbances cited below, and of the numerous minor encounters with robber bands by the constabulary and scouts, tremendous strides have been made during the present fiscal year. Greater progress in this direction could not justly be expected. It augurs well for the future of the Filipinos and for the safety of capital that may seek investments in the islands. These results, which are effected under American officers by the Filipinos themselves, confirm the wisdom of the policy of the administration in using the Filipinos to maintain order in the Philippines.

Among the leading disorders that have taken place and disturbances that have been quieted during the year may be cited: The Albay "insurrection," under Simeon Ola; the capture of Ricarte, the Hongkong agitator, and practically all of his followers; the Vigan "mutiny," effected by the agents of Ricarte; the Tomines "rebellion" in the Cagayan Valley, also largely due to the Hongkong junta; the extermination of Gasie's band in Mindoro; the Laguna raid, beginning at the town of Bay; the attack on San Jose, Nueva Ecija, by the Santa Iglesia segregation, under Pope Felipe Salvador; the capture of a new Katipunan in Pangasinan under "Captain-general" Pedro C. Gasig; the raiding of the towns of Gumaca and Catanauan, in Tayabas, by the "Cabecillo," Mariano Leonosta, and the wanton killing of women and children in the mountains of Antique by bands under Ompong and Pitoc. All of these have taken place outside of the Moro country.

Many minor affairs have taken place involving killing, torture, and robbery by armed bands. Various marauding expeditions may be credited to the fanatical pulajanes of the third district. In pursuit of one of these bands in Samar Lieutenant McCrea and three men lost their lives. Bands of carabao thieves are the greatest menace to good order in the archipelago, and they are largely recruited from the cock pits.

Detailed records of the events mentioned above are found in the accompanying reports of district commanders. The tragic story of the constabulary renegades, Hermann and Johnson, have been duly reported. Two popes, with rank of general, one (Isio) in the mountains of Negros, the other (Felipe Salvador) in the Candaba Swamps of Bulacan and Pampanga, and several ladrone chiefs, with self-imposed important military titles, in mountainous localities of other provinces remain out.

BUILDINGS.

With the occupation of the two lower floors of the Oriente Building and its storehouses on the estero, and half of the Cuartel Fortin, the headquarters, staff, and supply divisions are well provided and stores are now properly housed. The use of these two buildings permits a concentration and supervision of the work that was not practicable before, and it allows us to give up the Anda street building, the portion of the Intendencia Building occupied by the commissary, the ill-suited casemates on the Pasig used for commissary stores, and the Bishop's Palace on Nozaleda street used by the chief supply officer

and the divisions (excepting commissary) under him, quartermaster, paymaster, ordnance, medical, and telegraph. When the work of dredging the Binondo estero is finished it will be entirely practicable to load supplies on lighters from the Oriente go-down, as now obtains with commissaries from Cuartel Fortin on the Pasig. The greater part of the buildings occupied by constabulary and scouts is hired from private persons, but with the extension to previously unoccupied regions at times, where there are now larger buildings than Igorrote huts, it has been necessary to construct temporary barracks. Most of the old Guardia Civil buildings, many of which are by design well adapted to their purposes, are occupied by constabulary. Some of these are in dire need of repair, others have little left other than the walls. In not a few cases conventos are used with the permission of the church at fixed monthly rents.

It is evident that in the future more money will be required for the repair and construction of barracks, storehouses, and quarters than has been allotted in the past.

AMERICAN TROOPS.

Last year there were 14 regiments of infantry, 8 regiments of cavalry, 3 batteries of artillery, with the corresponding quota of technical and staff troops, amounting in round numbers to 18,000 men, occupying 70 posts. This year there are 9 regiments of infantry, 4 regiments of cavalry, and 3 batteries of artillery, amounting in round numbers to 12,000 men, occupying 39 posts. (Scouts are not included.)

SCOUTS.

Under the original act for the creation of scouts, of February 2, 1901, comprised in section 36 which follows, it is seen that officers are given provisional appointment for four years, to be continued for the second or subsequent term contingent upon conduct "satisfactory in every respect." Since more than half of the scouts organized under this act have been serving a greater part of the time under the undersigned since the passage of the constabulary act of January 30, 1903, ample opportunity has been afforded him for observing the operation of the law and especially the working of the scouts in connection with the latter-mentioned act.

SEC. 36. *Act of Congress approved February 2, 1901.*—That when in his opinion the conditions in the Philippine Islands justify such action the President is authorized to enlist natives of those islands for service in the Army, to be organized as scouts, with such officers as he shall deem necessary for their proper control, or as troops or as companies, as authorized by this act, for the Regular Army. The President is further authorized, in his discretion, to form companies, organized as are companies of the Regular Army, in squadrons or battalions, with officers and noncommissioned officers corresponding to similar organizations in the cavalry and infantry arms. The total number of enlisted men in said organizations shall not exceed twelve thousand, and the total enlisted force of the line of the Army, together with such native force, shall not exceed at any one time one hundred thousand.

The majors to command the squadrons and battalions shall be selected by the President from captains of the line of the Regular Army, and while so serving shall have the rank, pay and allowances of the grade of major. The captains of the troops or companies shall be selected by the President from first lieutenants of the line of the Regular Army, and while so serving they shall have the rank, pay, and allowances of captain of the arm to which assigned. The squadron and battalion staff officers, the first and second lieutenants of companies, may be selected from the noncommissioned officers or enlisted men of the Regular Army of not less than two years' service, or from officers or noncommissioned

officers or enlisted men serving, or who have served, in the volunteers subsequent to April twenty-first, eighteen hundred and ninety-eight, and officers of those grades shall be given provisional appointments for periods of four years each, and no such appointments shall be continued for the second or subsequent term unless the officer's conduct shall have been satisfactory in every respect. The pay and allowances of provisional officers of native organizations shall be those authorized for officers of like grades in the Regular Army. The pay, rations, and clothing allowances to be authorized for the enlisted men shall be fixed by the Secretary of War, and shall not exceed those authorized for the Regular Army.

When in the opinion of the President, natives of the Philippine Islands shall, by virtue of their services and character, show fitness for command, the President is authorized to make provisional appointments to the grades of second and first lieutenants from such natives, who, when so appointed, shall have the pay and allowances to be fixed by the Secretary of War, not exceeding those of corresponding grades of the Regular Army.

Although this act authorizes a strength of 12,000 men, the detail of captains and majors and the formation of battalions, the President has so far seen fit to organize only 50 companies, each of 100 men, with but one first lieutenant and one second lieutenant per company.

With the exception of the battalion now at the St. Louis Exposition commanded by a captain of infantry detailed as major, no steps have been taken toward forming battalions.

No one acquainted with the conditions existing in the Philippines, due to the low average civilization and the consequent readiness with which marauding bands are organized, would suggest a smaller active force than 10,000 men for the maintenance of public order. If it is desired to bring the remote tribes of Northern Luzon (Benguet, Lepanto-Bontoc, Abra, Isabela, and Nueva Vizcaya), of Mindanao, Paraguan group, Sulu group, Batanes and other islands, and I might add the mountain people of every province in the archipelago, into proper relations with the government, this force must be materially increased. By the very nature of this insular holding, and by virtue of the character of the American Government and nation, these people must be reached—if not now, in the near future.

The enlistment of these semicivilized people, by which elements of warring rancherias or barrios are often brought into the same organization, has a most wholesome effect in diminishing head-hunting and other internecine practices. The education of scouts and constabulary during their terms of enlistment amounts to a practical asset to the government, and no better or more rapid method of developing such people as referred to is known to the undersigned.

With a view to minimizing insular expenses, efforts have been made to reduce the constabulary; but in spite of this and of the employment of 30 companies of scouts, circumstances have rendered an increase of constabulary to 7,500 men imperative, with a necessary tendency toward further increase. The present force of natives—both kinds—is about sufficient to meet the rapid development of government in these islands.

While the Commission recommends, also largely for economic reasons, further employment of scouts instead of increasing the constabulary, it is found that their usefulness is limited by the following:

I. Two district chiefs are not army officers and can not, therefore, command scouts;

II. Scout companies are under-officered, having an average of approximately one and one-half officers per company;

III. A deficiency of officers prevents the distribution of scouts as required by the nature of the service, and the supplying of these troops in remote stations with their fixed ration is unduly difficult.

The scouts, like the constabulary, are primarily intended for insular service and it would not seem wise on the part of the Government to continue increasing either force while parts of the other remained idle.

With few exceptions, scout officers have responded readily and efficiently to the work required of them; and there is no reason why scouts, with a quota of officers permissible under the original act and with certain changes indicated further on, might not be made equally efficient for insular service in all respects with constabulary. The term "constabulary" gives but an imperfect idea of the duties this force has been performing, and a number of years will elapse before the major portion of its work ceases to be field service in detachments.

In recommending applicants for officers of scouts it was but natural that army officers should favor old soldiers who had deserved well of the Government and who were therefore entitled to recognition. This tendency has introduced into the scouts some officers who are already too old for field service and who are too conservative to learn any new language or adapt themselves to conditions their long garrison service has not taught. It is too much to believe that these officers will accomplish all that the Government should justly expect of them. In the future appointments much consideration should be given the element of age.

The act of Congress of January 30, 1903, follows:

AN ACT to promote the efficiency of the Philippines constabulary, to establish the rank and pay of its commanding officers, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That officers of the Army of the United States may be detailed for service as chief and assistant chiefs, the said assistant chiefs not to exceed the number four, of the Philippines Constabulary, and that during the continuance of such details the officer serving as chief shall have the rank, pay, and allowances of brigadier-general, and the officers serving as assistant chiefs shall have the rank, pay, and allowances of colonel: *Provided,* That the difference between the pay and allowances of the brigadier-general and colonels, as herein provided, and the pay and allowances of the officers so detailed in the grades from which they are detailed shall be paid out of the Philippine treasury.

SEC. 2. That any companies of Philippine Scouts ordered to assist the Philippines Constabulary in the maintenance of order in the Philippine Islands may be placed under the command of officers serving as chief or assistant chiefs of the Philippines Constabulary as herein provided: *Provided,* That when the Philippine Scouts shall be ordered to assist the Philippines Constabulary, said scouts shall not at any time be placed under the command of inspectors or other officers of the constabulary below the grade of assistant chief of constabulary.

This provides for the control of scouts when ordered to assist the constabulary in the maintenance of peace by putting them under the command of army officers serving as chief and assistant chiefs of constabulary with temporary army rank of brigadier-general and colonels. The division commander decided that this command unqualified by law should be tactical, by General Orders, No. 13, February 20, 1903:

SEC. 2. The Philippine Scouts companies will be ordered to assist the constabulary under the above act of Congress only by the commanding general, division of the Philippines, and when so ordered they will receive orders only from officers of the Army who are detailed as chief or assistant chiefs of the constabulary, and will be subject to their orders for tactical purposes only; for administrative purposes scout companies will remain under control of the division commander.

Under this decision scouts and constabulary have worked together with practically no friction and are at present, in spite of certain

officers or enlisted men serving, or who have served, in the volunteers subsequent to April twenty-first, eighteen hundred and ninety-eight, and officers of those grades shall be given provisional appointments for periods of four years each, and no such appointments shall be continued for the second or subsequent term unless the officer's conduct shall have been satisfactory in every respect. The pay and allowances of provisional officers of native organizations shall be those authorized for officers of like grades in the Regular Army. The pay, rations, and clothing allowances to be authorized for the enlisted men shall be fixed by the Secretary of War, and shall not exceed those authorized for the Regular Army.

When in the opinion of the President, natives of the Philippine Islands shall, by virtue of their services and character, show fitness for command, the President is authorized to make provisional appointments to the grades of second and first lieutenants from such natives, who, when so appointed, shall have the pay and allowances to be fixed by the Secretary of War, not exceeding those of corresponding grades of the Regular Army.

Although this act authorizes a strength of 12,000 men, the detail of captains and majors and the formation of battalions, the President has so far seen fit to organize only 50 companies, each of 100 men, with but one first lieutenant and one second lieutenant per company.

With the exception of the battalion now at the St. Louis Exposition commanded by a captain of infantry detailed as major, no steps have been taken toward forming battalions.

No one acquainted with the conditions existing in the Philippines, due to the low average civilization and the consequent readiness with which marauding bands are organized, would suggest a smaller active force than 10,000 men for the maintenance of public order. If it is desired to bring the remote tribes of Northern Luzon (Benguet, Lepanto-Bontoc, Abra, Isabela, and Nueva Vizcaya), of Mindanao, Paraguan group, Sulu group, Batanes and other islands, and I might add the mountain people of every province in the archipelago, into proper relations with the government, this force must be materially increased. By the very nature of this insular holding, and by virtue of the character of the American Government and nation, these people must be reached—if not now, in the near future.

The enlistment of these semicivilized people, by which elements of warring rancherias or barrios are often brought into the same organization, has a most wholesome effect in diminishing head-hunting and other internecine practices. The education of scouts and constabulary during their terms of enlistment amounts to a practical asset to the government, and no better or more rapid method of developing such people as referred to is known to the undersigned.

With a view to minimizing insular expenses, efforts have been made to reduce the constabulary; but in spite of this and of the employment of 30 companies of scouts, circumstances have rendered an increase of constabulary to 7,500 men imperative, with a necessary tendency toward further increase. The present force of natives—both kinds—is about sufficient to meet the rapid development of government in these islands.

While the Commission recommends, also largely for economic reasons, further employment of scouts instead of increasing the constabulary, it is found that their usefulness is limited by the following:

I. Two district chiefs are not army officers and can not, therefore, command scouts;

II. Scout companies are under-officered, having an average of approximately one and one-half officers per company;

III. A deficiency of officers prevents the distribution of scouts as required by the nature of the service, and the supplying of these troops in remote stations with their fixed ration is unduly difficult.

The scouts, like the constabulary, are primarily intended for insular service and it would not seem wise on the part of the Government to continue increasing either force while parts of the other remained idle.

With few exceptions, scout officers have responded readily and efficiently to the work required of them; and there is no reason why scouts, with a quota of officers permissible under the original act and with certain changes indicated further on, might not be made equally efficient for insular service in all respects with constabulary. The term "constabulary" gives but an imperfect idea of the duties this force has been performing, and a number of years will elapse before the major portion of its work ceases to be field service in detachments.

In recommending applicants for officers of scouts it was but natural that army officers should favor old soldiers who had deserved well of the Government and who were therefore entitled to recognition. This tendency has introduced into the scouts some officers who are already too old for field service and who are too conservative to learn any new language or adapt themselves to conditions their long garrison service has not taught. It is too much to believe that these officers will accomplish all that the Government should justly expect of them. In the future appointments much consideration should be given the element of age.

The act of Congress of January 30, 1903, follows:

AN ACT to promote the efficiency of the Philippines constabulary, to establish the rank and pay of its commanding officers, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That officers of the Army of the United States may be detailed for service as chief and assistant chiefs, the said assistant chiefs not to exceed the number four, of the Philippines Constabulary, and that during the continuance of such details the officer serving as chief shall have the rank, pay, and allowances of brigadier-general, and the officers serving as assistant chiefs shall have the rank, pay, and allowances of colonel: *Provided*, That the difference between the pay and allowances of the brigadier-general and colonels, as herein provided, and the pay and allowances of the officers so detailed in the grades from which they are detailed shall be paid out of the Philippine treasury.

Sec. 2. That any companies of Philippine Scouts ordered to assist the Philippines Constabulary in the maintenance of order in the Philippine Islands may be placed under the command of officers serving as chief or assistant chiefs of the Philippines Constabulary as herein provided: *Provided*, That when the Philippine Scouts shall be ordered to assist the Philippines Constabulary, said scouts shall not at any time be placed under the command of inspectors or other officers of the constabulary below the grade of assistant chief of constabulary.

This provides for the control of scouts when ordered to assist the constabulary in the maintenance of peace by putting them under the command of army officers serving as chief and assistant chiefs of constabulary with temporary army rank of brigadier-general and colonels. The division commander decided that this command unqualified by law should be tactical, by General Orders, No. 13, February 20, 1903:

Sec. 2. The Philippine Scouts companies will be ordered to assist the constabulary under the above act of Congress only by the commanding general, division of the Philippines, and when so ordered they will receive orders only from officers of the Army who are detailed as chief or assistant chiefs of the constabulary, and will be subject to their orders for tactical purposes only; for administrative purposes scout companies will remain under control of the division commander.

Under this decision scouts and constabulary have worked together with practically no friction and are at present, in spite of certain

infected localities, maintaining a higher degree of order than has ever before obtained in the archipelago. Both division and department commanders are fully carrying out the provisions of this act and are giving every assistance to a successful cooperation of the two forces. It is easy to see, however, that officers with limited knowledge of field service in general, and of Philippine conditions in particular, and more interested in the finesse of regulation and construction than in the accomplishment of deeds and measures, could raise numerous quibbles concerning the phrase, tactical purposes.

If the revenues of the insular government were such as to permit the maintenance of a force necessary to maintain order throughout the territory, and to bring all the semicivilized and savage tribes within touch and influence of the government, the principal reason for the maintenance of Federal native troops would be for possible use without the limits of the archipelago.

Assuming what may be accepted as a fact—that the entire native contingent, constabulary and scouts approximately 12,000, should be used actively in effecting the above, and that the insular government can not at present devote more than \$2,000,000 (support of 7,000 men) per annum for this work, it becomes highly important to enact such measures as will minimize any friction that might develop and that will simplify the supply and command of this dual force.

The work required of the constabulary since its organization, chiefly fieldwork by detachments, has necessarily emphasized its military character until at the present time there is practically no difference between scouts and constabulary in so far as their military duties are considered.

Experience has also taught that it is extremely important to have high grade educated officers in the scouts and constabulary. The officer entering the Army has the advantage of the immediate direction of senior officers, while the officer entering the scouts or constabulary must be expected in the average case to command a separate station where his duties bring him constantly into relation with the officials and other people where he serves. Military efficiency, tact, gentility, and sufficient intelligence for a thorough appreciation of laws and regulations can not ordinarily be found without a liberal degree of education. The standard of constabulary officers has been raised until it is safe to say that it is fully equal to that of scout officers. Scout officers have been chosen from volunteer officers and noncommissioned officers of the Army, chiefly from the latter category; the same applies to constabulary officers with the difference that a number of the junior ones are graduates of military colleges.

Native troops can never have the moral influence of American troops, and the number of the latter will for a number of years depend upon the quantity of arms put into the hands of Filipinos.

There are some who think that scouts and constabulary should be consolidated into one homogeneous force commanded throughout by officers receiving commissions from the Federal Government, and all paid as far as possible by the insular government. The advocates of this state that it would create a more efficient military force, without in any way impairing its civil value, by (1) removing a supposed awkward condition of having the chief and assistant chiefs of constabulary (army officers) command scout companies while their

administrative needs are supplied by army staffs, and (2) by eliminating or minimizing possible friction between the various elements of the forces.

Homogeneity would certainly be obtained and civil efficiency might not be sacrificed, but as the class of officers desired must be equally as successful political agents as military agents, there could be a question regarding this. As regards (1) the division commander doubtless finds a certain inconvenience that, however, has not influenced results. Theoretically the present practice can not be well defended, but in this as in many other cases theory and practice do not march hand in hand. The very fact that it is unusual is enough to suggest doubts about it in a conservative body like the Army. As regards (2), the following from a report of Colonel Scott is quoted:

As to the question of friction between the organizations of the constabulary and scouts, I believe that this question can well be dropped. The officers of these two organizations have been volunteer officers or enlisted men working side by side, and many of them are warm personal friends. The amount of friction is comparatively nothing, and in one or two instances where it has arisen it is due generally to some bull-headed hotspur getting his toes or coat tails tramped on, or feeling that his dignity has not been quite held up to the standard which in his estimation it should have been. The officers eat and sleep together when they are working together; the enlisted men the same.

I have had for the past year 18 companies of scouts which have been more or less intimately associated with the constabulary in field and in garrison. While there may have been grumbling, which I have not heard, I am convinced that the two organizations could continue indefinitely to work together without anything more than an occasional grumble, the same as would be likely to arise in two companies of the same regiment. I, therefore, believe that this question might well be ignored.

If the highest authorities should see fit to turn over the sum required to maintain the scouts to the insular government, their supply could be effected through modified existing insular channels, thereby putting this branch under the civil governor both as to supply and command.

The service of native troops has conclusively shown the wisdom of their creation. In the first place, they are efficient and relatively very economical; in the second place, their organization with the training and education they receive materially aids in the development of the country. The experimental stage has passed. Various plans for reorganization might be effected that would be better than the present, but they have not been tried and they must therefore remain conjectures. The present is the result of evolution and is known. After carefully considering all the circumstances, I believe it advisable to maintain the present double system (scouts and constabulary) with such modifications as actual conditions have shown to be necessary and beneficial.

There are few persons who have had opportunity of carefully studying the situation that do not fully recognize the importance of placing whatever force may be necessary for the maintenance of peace and order immediately under the orders of the chief executive of these islands. The act of January, 1903, practically effects this; under it the policy of utilizing white troops solely as a reserve and for their moral effect, and the system of concentrating them into larger permanent garrisons may receive their fullest development.

Under the scout organic act quoted above, a first lieutenant of scouts has ended his career so far as promotion is concerned. The framers of the law doubtless recognized this as a military anomaly, and must have contemplated a change when scouts should have proved by experience the value and importance of their existence.

The writer is far from believing that all first lieutenants of scouts are worthy of being made captains, nor would it be for the best interests of the scout organization to fail to profit by the provision of the act detailing first lieutenants of the line as captains of scouts. Without such infusion of new blood, the standard of the organization would slowly drop; there would eventuate a tropical level. What has been said with regard to lieutenants and captains likewise applies to captains and majors.

The importance of having scout companies formed into battalions impresses itself continually with more force. Detached as they now are at one-company posts and less, even though not widely separated in distance, the question of drill, discipline, and a proper supervision of their duties and necessities leaves much to be desired. Under present conditions there are too few officers available for this work, and these companies can not receive the attention they should have.

To say, however, that scouts deteriorate operating under the provisions of the act of January, 1903, is equivalent to saying that an army deteriorates in war—in the very act for which it was created. It is true that the standard of garrison efficiency and drill skill is lowered in each case, yet it does not become a soldier to bemoan the inconveniences and disadvantages of war or of any other duty that may be the supreme goal of his existence.

Good active battalion commanders would make the work of scouts far more effective and would simplify their command and administration. They would also help maintain garrison efficiency. The importance of organizing companies into battalions under their present duties and separated stations is more imperative than if they were concentrated in posts. A proper inspection of scouts could then be made by the battalion commanders and their administrative needs be better effected by officers of the regular supply departments, either as at present or by the detail of these officers with the civil government.

The following is from Colonel Scott's report, and shows that he does not agree with some concerning the deterioration of scouts with constabulary:

I am fully prepared to show that the efficiency of scout organizations in the first district has been materially improved by the services which they have been called upon to perform since February, 1903, with the civil government, in assisting in maintaining the peace, in conjunction with the constabulary. Officers have become proficient in the multitudinous duties which have devolved upon them through the best of schools—experience.

The men have learned to be self-reliant and capable of caring for themselves in the field. The noncommissioned officers have learned the duties of scouting, making arrests, and handling prisoners while keeping within the confines of the civil laws.

Both officers and men are in good physical condition and hardened by field service. The benefits of this were brought especially to my notice last winter, while operating in the field in Ilocos Sur, where scout organizations were thrown together which had and had not been performing this duty.

In matters of courtesy and command, analogous relations should exist between scouts and constabulary to those now existing by law between regulars and volunteers. When the nature of the service, the equality as to intellectual, social, and professional attainments of the officers, and the identity of the enlisted strength are considered, the justice of this is as apparent as the ensuing results would be real. This is a highly important matter, and should receive early consideration.

If the enlisted men of scouts while serving in the Philippines be made amenable to the courts of first instance for major offenses, a long step in business procedure will be effected, and it is so recommended. I know of but one objection to this measure that could be advanced, namely, custom of the service, which in my opinion has no value as an argument in this particular case.

It is not believed that the present tendency toward maintaining scouts, both as regards quantity and kind of supplies, on a footing with American soldiers regardless of the tremendous difference of conditions can be justified from any point of view, either by Americans or impartial Filipinos. It is based on the principle that actuated the officer who insisted that laborers employed under him should have 1 peso a day, when an ample number were available at half a peso.

The present ration system renders the scouts less mobile than the constabulary. It should be made more flexible by the introduction of a money allowance in part or whole for expeditionary work. This would be more economical, and would largely relieve a detachment from being tied down to a train of cargadores whenever it takes to the field.

The undersigned believes that the present force of scouts and constabulary is sufficient to fully meet the requirements of the insular government, and that a more ample coordination of their duties under the civil governor can be obtained in a large measure under existing law, and by making effective the following, which he urgently recommends:

(1) The appointment of three officers for each company, half of the captaincies to be filled by promotion of scout officers and half by detail from the Army.

(2) The organization of battalions and the appointment of battalion commanders at the rate of four from the line of the Army and one from scout officers.

(3) That section 9, Act 175 of the civil commission, be made applicable to scout organizations serving under the civil governor.

(4) That enlisted men of scout organizations serving in the Philippines be made amenable for offenses not cognizable by summary courts to courts of first instance.

(5) That in matters of courtesy and command analogous relations be established between scouts serving with the civil government and constabulary as exist by law between regulars and volunteers of the army.

(6) That the scout ration be made more flexible by the introduction of a money allowance.

The undersigned desires to give public expression to the valuable services which the body of scouts has rendered the insular government, and to the willing and effective way in which both officers and men have responded to the arduous and complex duties imposed upon them. Above all, special credit is due Brig. Gen. George M. Randall, commanding Department of Luzon, where the majority of the scouts have been serving, for his full and complete cooperation with the requirements of the insular government and for his strict compliance with the letter and spirit of act of Congress approved February 2, 1901.

MUNICIPAL POLICE.

What has been said about this body in my last annual report has been emphasized by this year's experience. In the general case the result of putting arms into their hands has been to invite attack from robber bands desirous of replenishing their stock of arms and munitions. Some of these bands have more cohesion and are better led than the police. In not a few cases municipal police have been shown before courts to have formed parts of ladrone bands, and have surreptitiously connived with them in various ways.

Where the presidente is a specially vigorous, upright man with military instincts, or has the good fortune to select such a one as tiniente of police, the results of the operations of the police are very effective. Cases of this kind are the exception, and the policy of arming municipal police with bolos and clubs, rather than with firearms, is the outgrowth of three years experience. The tendency of municipal authorities to continue the time-honored custom of imposition on the tao is not diminished by backing up the police with firearms. Until they are better paid, and until constabulary officers are available for a more intimate inspection and command of them, the municipal police will not be of any value operating alone against armed bands. (The police of Manila is not included in these remarks.)

Last year the municipal police throughout the archipelago amounted to 10 captains, 171 lieutenants, 688 sergeants, 1,181 corporals, and 7,873 privates, or a total of 9,925. This year it amounts to 8 captains, 124 lieutenants, 405 sergeants, 909 corporals, 5,606 privates, making a total of 7,052.

INSTRUCTION.

The necessity of developing schools for officers and men for both theoretical and practical work was early recognized by the undersigned as highly important for the establishment and maintenance of proper standards of efficiency. The wide distribution required of constabulary by the nature of the service and the difficulty of inspection and discipline emphasizes this necessity; but, owing to the excessive and continuous work and the absence of any sort of reserve of officers or men, progress has been slow. The small reserves established at these headquarters and at two district headquarters are intended to be schools of theory and practice that will raise the standard of all classes.

The following order (75) shows what is demanded at each station:

GENERAL ORDERS, }	HEADQUARTERS PHILIPPINES CONSTABULARY,
No. 75.	Manila, June 16, 1904.

1. The following directions concerning the practical and theoretical instruction of the constabulary will supersede those contained in General Orders, No. 82, series of 1903, these headquarters:

(1) *Practical Instruction.*

There will be at each station at least two drills daily, except Saturdays, Sundays, and holidays, a regular drill for one hour, and, at a different time during the day, setting up exercises of twenty minutes. The regular drill will include the school of the company in infantry drill regulations, and will be, when at all practicable, attended by all officers. Exactness and thoroughness in the performance of the exercises laid down in the school of the soldier and school of the squad will be required before taking up the school of the company.

Officers shall be careful as to their dress and appearance at drill; they will wear belts and revolvers outside the coat, with belt neatly fastened and not hanging over hips, until sabers are procured.

Where field work or patrol duties are not sufficient to keep the men in first class marching condition, the drill will be lengthened to four hours once each week, and devoted to a practice march of 10 miles.

At stations where it is practicable, regular guard mounting will be held daily. At all stations the commanding officer will inspect the men, their clothing, arms, and equipments, their quarters and surroundings each Saturday morning. The ammunition in the possession of each soldier will be checked up at each Saturday inspection. Guard duty will be thoroughly taught and correct performance required. Instructions will also be given in the elements of first aid to the injured and in the care of arms and equipments.

At each station there should be daily at least two roll calls—at reveille and retreat. Other roll calls may be ordered by station commanders when they deem it necessary.

(2) *Theoretical Instruction.*

At all stations commanded by an officer two classes will be formed, the first class to consist of noncommissioned officers and such first-class privates as have shown by their intelligence and attention to duty that they possess the qualifications for noncommissioned officers. Instructions for this class will be held for one hour twice a week, and will embrace the following:

- Constabulary regulations and orders.
- Guard manual.
- Drill regulations.
- Military courtesies (General Orders, No. 76, 1904).
- Method of securing warrants and making arrests.
- Responsibilities as noncommissioned officers.
- Geography of the Philippine Islands.

The subjects embraced for the second class below:

The second class will consist of men not embraced in the first class. They will be assembled twice a week and instructed by means of lectures, concerning their duties as soldiers, in drill and guard duty, and the constabulary regulations, pay, allowances, penalties for offenses, etc. The noncommissioned officers will attend and assist in the instruction where practicable.

Both classes will be given instruction in English, special attention being devoted to those men who can read and write. When practicable to arrange with the local authorities for an American teacher, the English instruction may be given in this manner, and should consist of night school at least twice a week.

2. Senior inspectors are authorized to detail not to exceed four intelligent soldiers at their headquarters for instruction in clerical and office work in the office of the senior inspectors and supply officers. Their duty will be so regulated that each will learn something of the various duties pertaining to these offices, with a view to the practical utilization of their services later. Monthly report will show the number of men so detailed.

3. Station commanders will report at the end of each month concerning the work accomplished, and senior inspectors will indorse on their monthly reports a summary of the station reports, with comments and recommendations. They will call special attention by name to any officer who has been unusually successful in his instruction, as well as to any officer who has failed to get proper results from his men in compliance with this order.

4. Instruction herein ordered must never interfere with field work or with the other duties of the constabulary to guarantee order and to protect life and property in their vicinity. When the troops are not actually in the field, however, instruction must be constantly and systematically carried on. The district commander will give such instructions to supplement this order as they may deem necessary.

5. The following annual allowance of stationery for each student in the first class will be furnished by the quartermaster upon proper requisition: Three scratch pads, large; 1 quire ruled legal paper; one-half quire ruled letter paper; 1 penholder and 2 pens; 2 lead pencils; 1 quart black ink (for each 20 students).

Station commanders who desire it may also submit requisitions for a blackboard with crayons where it would be convenient to transport it to the station.

By command of Brigadier-General Allen:

W. C. RIVERS,
Captain, First United States Cavalry, Adjutant-General.

OFFICERS.

The quality of officers is being constantly improved.

The better the officer the smaller the force required, is an axiom. He must teach by example, and unless his mental and moral fiber be good his results are unsatisfactory. Young college men are being brought out from the States, but they require on arrival about six months' instruction before being assigned to independent stations. Highly recommended educated noncommissioned officers of the Regular Army require comparatively short periods of preparation. The Secretary of War has authorized the division commander to permit such to take examination with a view to promotion to officers of constabulary.

The following (78) sets forth the nature of the examination:

GENERAL ORDERS, }
No. 78.

HEADQUARTERS PHILIPPINES CONSTABULARY,
Manila, June 21, 1904.

Officers of the constabulary will be selected as provided below.

1. No person will be appointed who is under the age of 21 or over 30 years of age, who is not a citizen of the United States, unless he has been honorably discharged from the military or naval service of the United States, or who is not a native of the Philippine Islands or a person who has, under and by virtue of the treaty of Paris, acquired the rights of a native of the islands; or who is not physically qualified to discharge all the duties of an officer in active service, or who has any deformity of the body or mental infirmity, or whose moral habits are not good.

2. A candidate who has been graduated at a regularly incorporated college may be appointed without mental examination on presentation of a diploma, together with a recommendation of the faculty of the institution and with full and satisfactory evidence as to mental capacity, moral character, and personal habits, and occupation since graduation, if the date thereof is not more than two years before date of making application. An applicant who has graduated at a college giving military instruction will give his full record in the military department.

3. Every candidate appearing for examination will be subjected to a rigid physical examination, which will conform to the standard required of recruits for the United States Army, and applicants for appointment from the United States must include in their papers a certificate of physical examination by two physicians, which will embrace the information required by the form for the examination of recruits.

4. All applicants, except those specified in paragraph 2 above, will be examined as outlined herein below. No candidate will be examined unless he has the authority of the chief of constabulary to appear for examination, and in the case of a soldier in the United States Army the authority of the division commander.

5. The examination of candidates will include the following:

(1) Grammar, including spelling and writing from oral dictation.
(2) Arithmetic, including the application of its rules to all practical questions.
(3) Geography, with reference to the general geography of the world—the principal physical and political divisions of the earth's surface.

(4) History, including the elements and outlines of general history, and particularly the history of the United States.

(5) Constitutional law, including the elements of the Constitution of the United States and the main principles upon which the Government under it is organized.

(6) Examination will also be made as to the general qualifications of each applicant, including aptitude and probable efficiency as an officer of the constabulary. The military record of an applicant who is or has been a soldier, as certified to by his company and post commanders, will be considered under this subhead. In the case of an applicant who is or has been recently a soldier in the Army a portion of the examination under this subhead will be a practical test in the drill regulations of the Army in which he has served, and oral questions in the main principles of army administration and discipline.

(7) Physical aptitude, as determined by the medical examination or other evidence submitted.

(8) Careful inquiry will be made concerning the antecedents, personal habits, and moral character of each applicant, who must submit evidence from reputable persons. Candidates will not be graded under this head, but those whose habits and associations are not up to the standard, or who are addicted to the use of intoxicants, will be reported as not suitable to appointment.

6. In awarding marks the relative weights will be given to each subject as in the form below. The general average of a candidate will be computed as follows: Mark each question according to its relative weight, and reduce the aggregate marks thus obtained in each subject to a scale of 100; the result will give the average proficiency in the subject. Multiply the average in each subject by the number indicating the relative weight of the subject and divide the sum of the products by the sum of the relative weights; the quotient will be the general average. No candidate will be passed who shall not have obtained an average of 60 per cent in each subject, and a general average of at least 66 per cent.

Example.

No.	Subject.	Averages.	Relative weight.	Products of multiplication by relative weights.
1	English grammar.....	82	3	246
2	Mathematics.....	76	4	304
3	Geography.....	80	2	160
4	History.....	73	3	219
5	Constitutional law.....	65	2	130
6	Aptitude and probable efficiency.....	80	5	400
7	Physique.....	87	3	261
	Total.....		22	1,720
	General average.....			78.17

7. Where several candidates are examined, the order of relative merit of all will be reported. Candidates who pass the required examinations and are recommended for appointment will be placed upon an eligible list and will be appointed as vacancies occur should there be not sufficient vacancies for them at the time of examination.

By command of Brigadier-General Allen:

W. C. RIVERS,
Captain, First United States Cavalry, Adjutant-General.

In the subsequent examinations for promotions general fitness is rated at 25 as against 15 for the highest study.

Results of operations of constabulary and scouts for the fiscal year ending June 30, 1904, by districts; also a comparison with preceding year.

Outlaws killed.....	191	63	150	17	10	431	1,185
Outlaws wounded.....	94	13	25		7	139	
Outlaws captured.....	941	164	161	86	20	1,364	2,722
Enlisted men deserted.....	7	1	8	27	9	52	84
Enlisted men killed.....	20	1	8	3		32	53
Enlisted men wounded.....	15		5	1		21	25
Enlisted men died.....	31	29	52	6	10	118	
Number prisoners sentenced—							
More than two years.....	638	127	201	84		1,050	
Less than two years.....	347	1,086	453	342	10	2,238	
Number prisoners in provincial jail at end of year.....	1,688	464	241	372	69	2,834	
Officers killed.....			1	1		2	5
Officers died.....	3		1		1	5	7
Officers wounded.....							6

The above table shows that there were only 431 outlaws killed in 1904, as compared with 1,185 in 1903; that the constabulary casualties, killed and wounded, were 55 in 1904, and 88 in 1903; that the firearms of all classes captured were 706 in 1904 and 948 in 1903; that the miles covered in patrols, reconnoissances, and pursuit of criminals were, respectively, 158,532 and 222,457; that percentage in desertions were 0.007 and 0.013, respectively. If the Vigan deserters be not included, then the percentage for 1904 is only 0.005. In general, it may be said that the loss by desertion is insignificant.

The coming year will doubtless show a still relatively greater improvement in peace conditions than has the past year.

DIVISION OF INFORMATION.

Considering the money expended, this division, under Captain Grove, is probably more effective in securing results of certain kinds, difficult to officials or agents without special training and aptitude, than any other element of the constabulary. It comprises a map section and a detective section, with subsections at Iloilo, Malabon and Alfonso, Cavite, and Tanauan, Batangas. Besides, every senior inspector may have one or more secret-service men operating in connection with the central office. For special cases occurring in the provinces detectives are sent out from Manila for investigations. The following table shows what has been accomplished by this division during the year:

Cases reported and acted upon by the division of information from July 1, 1903, to June 30, 1904.

Arrests.....	1,483
Fugitives (all classes) killed.....	14
Number convicted.....	240
Number acquitted.....	53
Number awaiting trial.....	135
Number not reported, convicted, or acquitted.....	1,039
Number revolvers and rifles captured.....	81
Number carabaos captured.....	186
Number horses captured.....	22
Rounds ammunition (all kinds) captured.....	4,123
Secret-service men and spies killed.....	6
Daggers captured.....	9
Bolos captured.....	42
Prisoners died while awaiting trial.....	16

Evidently there have been more convictions than is here given, but as this office has not been kept notified of the final disposition of cases by the courts, it is impracticable to give the exact number of acquittals or convictions.

Ricarte insurrection case.

Number arrests.....	42
Number not arrested.....	25
Number complaints filed.....	67
Number not tried.....	2

Secret-service men, division of information, Philippines Constabulary, employed, discharged, reinstated, killed, etc.

Employed.....	118
Discharged.....	76
Reinstated.....	6
Resigned.....	8
Killed.....	5

REPORTS OF ASSISTANT CHIEFS.

The accompanying reports, submitted by the commanding officers of the five constabulary districts and the chief supply officer, contain much information not only valuable as setting forth the conditions as to peace and order in the archipelago, but also useful in furnishing data for future historical work. They are, therefore, given in full. They show so well the kind and quality of work that has been performed that special attention is invited to their perusal. Persons unacquainted with the services of these officers have but a vague conception of what has devolved upon them or what they have accomplished. The work has involved continuous field service, in many respects resembling that accomplished by the army from 1898 to 1900, but naturally against smaller bands.

FIRST DISTRICT (TAGALO).

Headquarters, Manila; Col. W. S. Scott, commanding. This command is composed of 2,200 constabulary and 1,700 scouts, occupying about 80 posts. The population of this district is 1,949,154.

SECOND DISTRICT (TAGALO AND BICOL).

Headquarters, Lucena, Tayabas; Col. H. H. Bandholtz, commanding. This command is composed of 1,200 scouts and 1,000 constabulary, occupying about 43 posts. The population of this district is 1,000,000.

THIRD DISTRICT (VISAYA).

Headquarters, Iloilo; Col. W. C. Taylor, commanding. This command is composed of 2,000 scouts and 1,750 constabulary, garrisoning about 80 posts. The population of the district is 2,856,783.

FOURTH DISTRICT (ILOCANOS AND MOUNTAIN TRIBES).

Headquarters, Vigan, Ilocos Sur; Maj. Jesse S. Garwood, commanding. This command is composed of 900 constabulary and occupies about 33 posts. There are also two companies of scouts commanded directly from Manila. The population of this district is 727,781.

FIFTH DISTRICT (MOROS, VISAYAS, AND WILD TRIBES).

Headquarters, Zamboanga, Mindanao; Col. J. G. Harbord, commanding. This command has an authorized strength of 800 constabulary, but it is not yet fully organized. At present there are 14 stations. The population of the district is 278,183. The commanding general of the department of Mindanao is also governor of the Moro Province. The relations of the constabulary to the civil government in this district are somewhat modified by the so-called Moro act.

CHIEF SUPPLY OFFICER.

Col. David J. Baker, Manila. This officer has direct supervision over all the supply departments. This work is so intimately connected with the existence and maintenance of the constabulary that the reports of Colonel Baker and the heads of divisions are herewith incorporated in this report.

HEADQUARTERS PHILIPPINES CONSTABULARY,
OFFICE OF THE CHIEF SUPPLY OFFICER,
Manila, P. I., July 27, 1904.

SIR: I have the honor to submit the following report for the fiscal year ending June 30, 1904:

This office was originally created to purchase the supplies necessary to feed, clothe, arm, equip, and quarter the constabulary. When the undersigned was detailed to it the further function of supervising and coordinating the work of the supply divisions was assigned to it.

In practice the assistant chief supply officer attends to all purchasing details, and the chief supply officer, assisted usually by an examiner, to the supervising.

To how considerable the yearly purchases now amount is shown in the reports of the various division chiefs. The policy has been followed of making them, generally in large quantities, of Philippine merchants, by contract after advertising. It is believed that this has resulted in economy to the government and satisfaction to the merchants.

Of course all ordnance has been purchased from the United States Army, and in this and in providing clothing and equipage in emergency both the Ordnance and the Quartermaster's departments have proved willing friends.

Experience has shown that certain staple stores, the use of which is general and not confined to this bureau, can be more advantageously obtained of the insular purchasing agent, and accordingly he is depended on for all imported forage, leather, cleaning supplies, and hardware.

The supervising and coordinating of the supply divisions, and the distribution of stores and funds to 47 district and provincial headquarters has necessitated correspondence aggregating more than 13,000 communications. This is notwithstanding the fact that in dealing with the six supply divisions themselves unrecorded memoranda are used whenever practicable and the division chiefs for the last six months have been, on all routine matters, corresponding direct with those concerned.

In addition to the routine of supervision, purchase, and distribution, various orders intended to improve fiscal organization and administration were drafted in this office. Among them were those regulating the issue and account of clothing; regulating the issue of firearms and ammunition to municipalities; creating district supply officers and allotting disbursements to district and provincial headquarters; organizing and regulating the medical division; defining the duties of responsible and accountable officers concerning property, and establishing a ration system for enlisted men.

Some features of the clothing system that were devised to insure prompt liquidation of old accounts can probably be now simplified.

It is believed that the ration system is as simple, flexible, and practical a one as can be devised to meet the nature of our service and the character of the country. The very favorable reports of a majority of the district chiefs confirm this opinion.

The idea of a chief supply officer did not originate with the constabulary; the creation of such a position in the headquarters staff of the United States Army was suggested some years ago by the then Secretary of War, Mr. Root; but as far as known there is no exactly similar position in any military organization other than this. The writer believes that the experiment has proved a success, in that it has tended to efficient and economical cooperation between the different supply chiefs; has insured close attention to the wants of those in field and garrison; has resulted in close adaptation of financial means to constabulary ends, and has freed the chief of a mass of detail that hampered and interfered with his real and more important duties.

In the constabulary all supplies are ultimately distributed through provincial supply officers, and most disbursements of funds are made through them and the district supply officers. At first glance the system seems novel, but in reality it only considerably differs from the practice in our army in segregating at a district or provincial headquarters all fiscal matters in the hands of one man; and in this regard more approximates to the German system and the British garrison system than to American precedents. After an acquaintance with it of some years, and a direct charge of its administration of more than a year, the writer can find no serious fault with the system, and no substitute as well adapted to the peculiarities of the service and of the country.

The personnel has in too many cases proved dishonest or incompetent. While the casualties among this class of officers show that there has been no condonation of guilt or compromise with justice, it is certain that many derelictions have been due not to bad morals but to lack of proper education and of training in responsibility, and to relaxing and enervating environments.

The remedy for this condition is the employment of better bred, educated, and trained men, at larger salaries. There seems little doubt that this solution will soon be supplied.

The telegraph division was organized to take over and operate for the civil government lines no longer needed by, or that for lack of men could no longer be operated by, the signal corps detachment of the Philippines Division.

What the growth of this division during the past year has been is shown by these figures: The telegraph lines operated by it have increased from 505 to 2,037 miles; the telephone lines from 1,871 to 2,213 miles; the cables from 85 to 163 miles; an aggregate increase of 1,953 miles. In consequence the telegraph offices have been increased from 23 to 60, and the telephone offices from 155 to 350.

The mileage of lines transferred was 690, included in which are the Aparri-San Fernando trunk line and important ones in Negros and Panay. The mileage of lines constructed was 777; included in this is the Luzon-Catanduanes cable, which was laid with the indispensable assistance of the U. S. cableship *Burnside*. The mileage of lines reconstructed was 102.

The United States Signal Corps now operates telegraph lines, 1,351 miles; cables, 1,460 miles; telephone lines, 398 miles; an aggregate of 3,210 miles requiring 78 telegraph and 436 telephone offices. The aggregate mileage of the constabulary telegraph division is 4,414 miles.

Due to the fact that the signal corps is operating nearly all the large revenue-producing offices, it handled 78 per cent of the commercial messages, the total revenue from which was \$58,675.67. However, even of this the share of the telegraph division increased from \$1,884 in 1903 to \$12,908 in 1904.

Most of the construction and reconstruction has been of a lasting nature, using iron instead of wooden poles.

To meet this growth in mileage and work, the American operators and linemen have increased from 31 to 67, and the native operators and linemen from 99 to 120.

The most immediate wants of the archipelago in order of importance are the laying of a cable between Iloilo and Bacolod, which besides saving much mileage and relay would give two southern trunk lines; the building of a telegraph line across Samar, and of one in southern Mindanao, and of another from Bautista to Bayombeng via the San Nicolas Pass. Their construction waits on the necessary appropriations and the obtaining of a cableship.

The training of native operators has progressed so satisfactorily that success is assured.

The Ilocanos seem most promising, and the schools at Vigan and Manila insure a constant and adequate supply.

This year the division cost approximately \$155,237, of which \$74,428 was for salaries and wages and the remainder for materials, transportation and installation.

It will be noticed that the number of officers is relatively much less than during 1903. It is intended to continue decreasing them, thus raising their standard. In view of this the recommendation of the superintendent that they, like other constabulary officers, be given military rank, is approved.

The ordnance division started with an equipment that is listed in the report of the ordnance officer as "Receipts from U. S. Army," and the value of which as determined by the board convened for the purpose totaled \$119,622.23. Since the creation of the constabulary the writer has been accountable for these stores, but the settlement of counterclaims between the army and the civil government, authorized in a recent act of Congress, will enable him to rid himself of this accountability and transfer the stores to the ordnance officer, who will then become accountable for them to the insular government.

This nucleus has been added to from time to time by cash purchases, usually of the Army Ordnance Department. During the past year these purchases amounted to \$35,860.

Prior to this year all repairs for the constabulary were done at the Manila Ordnance Depot; but because its allotment of funds was only sufficient to do the work of the Philippines Division, and because the amounts paid by the constabulary did not revert to this arsenal, this became impracticable. In consequence it became necessary to install a cleaning, repairing, and bluing plant, which will soon be completed. This work will then no longer be done by hand, but better, quicker, and cheaper by machinery. Besides repairing its own leather equipment this division repairs all harness used by the quartermaster's division. On the whole this division is well equipped, and it is well managed.

Its cost for the year ending June 30 was \$45,899, of which \$7,452 was for salaries and wages and the remainder for stores and material.

In its organization, equipment and work this division has been much aided by Colonel Russell, late chief ordnance officer of the Philippines Division, and his assistants.

During the year the medical service has been segregated into a division, and its duties apportioned and regulated. The superintendent has done much to raise the standard of the lieutenants, and is now able to recommend the appointment of only licensed graduates of medical schools to those positions. It now operates seven hospitals and two wards, having a total bed capacity of 200. In them there was treated 1,332 persons, of whom only 26 died.

It also has in every province of the first, second, and fourth districts hospital corps men who are capable of giving first aid to the wounded, and of treating minor complaints.

Through the superintendent and his district surgeons, supplies are distributed and accounted for, bills for medical and surgical service checked, hospitals supervised, and the

The writer is far from believing that all first lieutenants of scouts are worthy of being made captains, nor would it be for the best interests of the scout organization to fail to profit by the provision of the act detailing first lieutenants of the line as captains of scouts. Without such infusion of new blood, the standard of the organization would slowly drop; there would eventuate a tropical level. What has been said with regard to lieutenants and captains likewise applies to captains and majors.

The importance of having scout companies formed into battalions impresses itself continually with more force. Detached as they now are at one-company posts and less, even though not widely separated in distance, the question of drill, discipline, and a proper supervision of their duties and necessities leaves much to be desired. Under present conditions there are too few officers available for this work, and these companies can not receive the attention they should have.

To say, however, that scouts deteriorate operating under the provisions of the act of January, 1903, is equivalent to saying that an army deteriorates in war—in the very act for which it was created. It is true that the standard of garrison efficiency and drill skill is lowered in each case, yet it does not become a soldier to bemoan the inconveniences and disadvantages of war or of any other duty that may be the supreme goal of his existence.

Good active battalion commanders would make the work of scouts far more effective and would simplify their command and administration. They would also help maintain garrison efficiency. The importance of organizing companies into battalions under their present duties and separated stations is more imperative than if they were concentrated in posts. A proper inspection of scouts could then be made by the battalion commanders and their administrative needs be better effected by officers of the regular supply departments, either as at present or by the detail of these officers with the civil government.

The following is from Colonel Scott's report, and shows that he does not agree with some concerning the deterioration of scouts with constabulary:

I am fully prepared to show that the efficiency of scout organizations in the first district has been materially improved by the services which they have been called upon to perform since February, 1903, with the civil government, in assisting in maintaining the peace, in conjunction with the constabulary. Officers have become proficient in the multitudinous duties which have devolved upon them through the best of schools—experience.

The men have learned to be self-reliant and capable of caring for themselves in the field. The noncommissioned officers have learned the duties of scouting, making arrests, and handling prisoners while keeping within the confines of the civil laws.

Both officers and men are in good physical condition and hardened by field service. The benefits of this were brought especially to my notice last winter, while operating in the field in Ilocos Sur, where scout organizations were thrown together which had and had not been performing this duty.

In matters of courtesy and command, analogous relations should exist between scouts and constabulary to those now existing by law between regulars and volunteers. When the nature of the service, the equality as to intellectual, social, and professional attainments of the officers, and the identity of the enlisted strength are considered, the justice of this is as apparent as the ensuing results would be real. This is a highly important matter, and should receive early consideration.

If the enlisted men of scouts while serving in the Philippines be made amenable to the courts of first instance for major offenses, a long step in business procedure will be effected, and it is so recommended. I know of but one objection to this measure that could be advanced, namely, custom of the service, which in my opinion has no value as an argument in this particular case.

It is not believed that the present tendency toward maintaining scouts, both as regards quantity and kind of supplies, on a footing with American soldiers regardless of the tremendous difference of conditions can be justified from any point of view, either by Americans or impartial Filipinos. It is based on the principle that actuated the officer who insisted that laborers employed under him should have 1 peso a day, when an ample number were available at half a peso.

The present ration system renders the scouts less mobile than the constabulary. It should be made more flexible by the introduction of a money allowance in part or whole for expeditionary work. This would be more economical, and would largely relieve a detachment from being tied down to a train of cargadores whenever it takes to the field.

The undersigned believes that the present force of scouts and constabulary is sufficient to fully meet the requirements of the insular government, and that a more ample coordination of their duties under the civil governor can be obtained in a large measure under existing law, and by making effective the following, which he urgently recommends:

(1) The appointment of three officers for each company, half of the captaincies to be filled by promotion of scout officers and half by detail from the Army.

(2) The organization of battalions and the appointment of battalion commanders at the rate of four from the line of the Army and one from scout officers.

(3) That section 9, Act 175 of the civil commission, be made applicable to scout organizations serving under the civil governor.

(4) That enlisted men of scout organizations serving in the Philippines be made amenable for offenses not cognizable by summary courts to courts of first instance.

(5) That in matters of courtesy and command analogous relations be established between scouts serving with the civil government and constabulary as exist by law between regulars and volunteers of the army.

(6) That the scout ration be made more flexible by the introduction of a money allowance.

The undersigned desires to give public expression to the valuable services which the body of scouts has rendered the insular government, and to the willing and effective way in which both officers and men have responded to the arduous and complex duties imposed upon them. Above all, special credit is due Brig. Gen. George M. Randall, commanding Department of Luzon, where the majority of the scouts have been serving, for his full and complete cooperation with the requirements of the insular government and for his strict compliance with the letter and spirit of act of Congress approved February 2, 1901.

examination of recruits and discharged men arranged. Provision for organizing a detachment of this division in the fifth district is made in the pending appropriation bill.

While the organization is simple and inexpensive, it admits of reasonable expansion, and has met the demands made on it. However, it must be remembered that the constabulary avails itself of the many army hospitals in the provinces, and of the Civil Hospital in Manila, and only depends on its own medical division for first succor to the sick and wounded, hospital treatment in remote localities, and competent details to accompany expeditions and detachments in the field.

The appointment of constabulary medical officers as presidents of the boards of health in the provinces in which they are serving is recommended. The extra compensation will insure the securing of competent physicians, and thus benefit both the constabulary and the provinces.

This division cost during the past year about \$27,565, of which \$3,866 was for supplies. The commissary division, which supplies not only the constabulary but other civil bureaus and employees in the provinces, has an approximated working capital of about \$232,500. It sold during the year about \$107,000 worth, and transferred to provincial branches about \$242,500 worth of stores. It purchased \$319,000 worth of supplies, for \$23,000 worth of which it still owed at the end of June. All this would indicate that the working capital is too small and that it is turned over on an average of not to exceed 1.5 times a year.

The financial statement for the fourth quarter is not yet complete; that for the quarter ending March 31 is, and shows a net profit for the two and one-half years' operations of a little more than \$25,000. Much of this will be wiped out by the heavy losses sustained on rice during the last six months.

Bearing in mind that of the \$17,000 annual charge for salaries and wages the constabulary pays \$13,000; that prior to this year most of its transportation was paid not from its own but from constabulary funds, and that the great bulk of its transportation is now donated by the bureau of coast guard and transportation and by this bureau; and its annual loss from waste and damage is at least \$15,000—it is evident that the 10 per cent surcharge gives no profit.

For this the efficient and saving superintendent is in no way responsible. It is due in great measure to the difficulty and cost of transportation to remote stations. It costs from 50 to 100 per cent of their value to deliver commissaries at Baguio in Benguet, at Cervantes in Lepanto-Bontoc, at Bayonbong in Nueva Vizcaya, and at Ilagan in Isabela. The losses due to indifferent supply officers have also been considerable.

However, when it is considered that the insular government thereby insures the feeding of its much scattered constabulary and of its widely distributed insular and provincial officials and employees, it may congratulate itself on breaking so nearly even.

By your direction an increase of \$50,000 in the working capital has been requested. In that it should insure prompt payment and cheaper prices, real economy should result.

In July, 1903, no reliable information could be obtained from the quartermaster's division as to stores on hand—contracted for; nor as to its expenditures for fixed charges, transportation, and supplies.

These defects were due to cramped office and storage space, lack of system, and an ill-defined division of disbursements between the paymaster and the quartermaster.

They were largely corrected by removal to more commodious quarters, by the introduction of system, by confining all headquarters disbursements to the paymaster, and by relieving the quartermaster of accountability for property that pertained to the other supply divisions.

Great saving was also made in transportation charges by using, whenever possible, coast guard cutters, by increasing the land transportation, and by acquiring the launches and lighters necessary to load all stores. Not least was this done by detailing an officer as transportation quartermaster, who has done excellent work. In these matters the constabulary has been greatly assisted in manifold ways by the bureau of coast guard and transportation. From its chief down they have gone out of their way to divide burdens and aid us in every way.

This division, which handles the freight for all divisions, made 2,350 shipments aggregating nearly 4,000 tons. Of this about four-sevenths went by Government vessels, and of the remainder seven-fifteenths had to be shipped by rail to points not reached by water. Of the freight carried by commercial vessels, the greater weight was iron telegraph poles, which the coast guard fleet can not handle. The transportation of material and personnel cost approximately \$59,965. The great amount of stationery supplied has proved inadequate and should be increased.

The many and diverse relations between the different headquarters and offices of the constabulary and others of the insular government, of the army, and of the different provincial governments, and of the people of the archipelago entail an immense correspondence.

During the year effort has been made to so equip the constabulary with land and water transportation as to insure its mobility and safeguard it against the exactions of local contractors. In doing this China has been drawn on for mules, horses, and carabao, the United States for wagons and carts, and the Philippines for carretelas, boats, and lighters.

A thoroughly equipped pack train, manned by skilled packers, has been so far organized that the Benguet and Nueva Vizcaya detachments are doing good service, and mules for the Lepanto-Bontoc detachment are in progress of delivery.

There was spent for vehicles, animals, boats and other transport equipment, \$69,197.

While the constabulary has never been so well clothed as during the past year, that problem still presents vexatious and unsatisfactory phases. That over \$33,000 was paid to discharged men for clothing not drawn in kind seems to indicate that the allowance is ample. Also the placing of orders for large quantities long ahead of the date of delivery has insured reasonable reserve stocks and cheapened the clothing price lists. On the other hand, some articles, and especially the important components of footgear—shoes and leggings—have proved unsatisfactory and caused much complaint.

The only reliable source from which shoes, leggings, and some other supplies can be obtained is the Army Quartermaster's Department, and efforts to tap it are recommended. During the year there was paid for clothing and equipage \$212,095. For the same period the personnel of the quartermaster's division cost \$14,050.

The paymaster's division has disbursed about \$790,000 and transferred about \$1,340,000 to the various supply officers; in other words, handled about \$2,130,000 with an accuracy and a conformity to law that has practically freed it of those necessary pests—auditor's difference sheets.

Except under "Commissary stores," where lack of funds has sometimes prevented, all disbursements have been made most promptly. Well-founded complaints have sometimes been received of slowness in getting funds to outlying stations, thus delaying the payment of obligations and impairing the credit of the service. This was due to causes, some of which were and some not avoidable. It was never due to delay or inefficiency on the part of the paymaster's division. Realizing the importance of the difficulty the Commission has practically eliminated it by continuing old appropriations in force pending the passage of new ones.

The division lacks the clerical force necessary to sift statistical information and keep it up to date. In consequence when estimates and reports are in preparation, it and this office must practically cease all ordinary work and combine to seek the necessary data. What statistics there are in this report were obtained by adding the paymaster's disbursements and transfers to my records of outstanding obligations and subtracting the surpluses reported by the various supply officers. This division cost \$4,400, but is now costing at the rate of about \$5,500 per annum.

In paying, feeding, clothing, arming, equipping, transporting, quartering, doctoring, and providing for the other wants of the constabulary, some \$2,210,000 in funds and stores were handled and distributed. The cost of this, including that of this office, \$8,400, that of the supply officers, \$72,000, and that of the personnel of the telegraph division, \$74,500, was about \$211,000, or about 9½ per cent.

Considering only officers and enlisted men, and eliminating the telegraph division, which is a useful but not essential adjunct, the per capita cost of the constabulary during the fiscal year 1903 was about \$275, and during the fiscal year 1904 about \$253. This great saving was due to a variety of causes, but in large part to the efficiency and mutual cooperation of the chiefs of the supply divisions, Captains Fisk, Schultz, Baker, Robertson, Lovejoy, and Wheat, and the assistants in this office, Captains Ross and Harpold, all of whom I commend to your consideration. The reports of the six division chiefs are forwarded herewith.

Respectfully,

D. J. BAKER, Jr.,
Chief Supply Officer.

THE ADJUTANT-GENERAL PHILIPPINE CONSTABULARY,
Manila, P. I.

HEADQUARTERS PHILIPPINES CONSTABULARY,
TELEGRAPHIC DIVISION,
Manila, P. I., July 15, 1904.

SIR: I have the honor to make the following report for the telegraph division for the fiscal year ending June 30, 1904:

Number of telephone offices.....	436

There were handled by the telegraph service during the fiscal year 1,753,103 messages, of which 645,173 were "sent" messages. The total revenue represented by the commercial proportion of the above business amounted to \$58,675.67 United States currency, of which sum the Signal Corps, United States Army, handled 78 per cent, and the telegraph division of the Philippines Constabulary 22 per cent. This difference is accounted for by the fact that the Signal Corps is operating nearly all the large revenue-producing offices.

The heavy reconstruction which has been carried on during the year has been rendered necessary by the condition of lines as transferred to this division, and by the necessity of the renewal of a wooden-pole line about every two years. Fifteen thousand iron poles have been received from the United States, and all except a few hundred distributed to the most needed points. The iron pole is the best pole for this country. The best grade of wooden poles requires renewal, and those that take root and grow are good when they grow and bad when they do not. The life of the iron pole has not yet been determined, and when once erected these poles can be made to stand up under as many as five wires, whereas the wooden pole, such as is ordinarily used, can not be so made. Iron poles are thus additionally valuable when more than one wire is to be carried.

Working parties are now in the field in Isabela, Zambales, both provinces of Negros, Albay, and Leyte installing iron poles. In other provinces iron poles are being constantly put in the lines by regular linemen, without the aid of repair or construction gangs.

Probably the most important duties that have been performed by the telegraph division during the last fiscal year have been the laying of the Luzon-Catanduanes cable, the taking over from the signal corps of the Aparri line, and the installation in the Oriente Building, Manila, of a telephone and electric-light system. Inspector Clement represented this division at the cable laying, which was done by the U. S. cable ship *Burnside*, and that officer is now superintending some short land line construction near Tabaco, Albay, to make connections final, and thus put the island of Catanduanes into telegraphic communication with the world.

The transfer, on May 1 and subsequent dates, of the Aparri line was effected with the assistance of the officers of the Signal Corps and Inspectors Davies, Donnelly, and Davis, of this division. Inspector Davies is now engaged in installing 1,700 iron poles on this line in the province of Isabela.

Inspector Hyland has been in charge of the electric-light and telephone work in the Oriente Building, and his work has met with praise from those who are judges. When it is considered that the building has been four times wired for electric lights and three times the job has been condemned, no small degree of credit should be given the telegraph division in general, and Inspector Hyland in particular, that this difficult electrical installation should have been carried to a successful termination. The establishment of a small telephone system in the headquarters building should also be noted as part of the work of the division.

The telegraph lines operated by the telegraph division have been districted and officers of the division placed in charge as district telegraph officers. Operators and linemen in the different districts report to and are under the orders of their respective district telegraph officers, whom the undersigned holds responsible for the proper handling of their districts. This plan has been found to work splendidly, and the service is benefited by the technical knowledge and watchfulness of the officers.

The laying of the Iloilo-Bacolod cable, the building of a line across the northern part of Samar, the building of a line in southern Mindanao, and one from the railroad near Bautista to Bayombong, and the continued rebuilding in a number of wooden-pole provinces, are bright prospects for hard labor ahead.

Sometime ago the signal officer, Philippines Division, recommended that the property officers of the Signal Corps take up the government lines on the railroad and invoice those operated by the constabulary to the telegraph division. Under the contract executed by Colonel Allen, of the Signal Corps, and Mr. Higgins, of the railroad company, that company keeps the lines in repair. The railroad company's service in this particular is fair, but that is the best that can be said of it. The undersigned agrees with the signal officer, Philippines Division, that these lines should be invoiced to some one. This division handles three wires from Manila to Dagupan, and operates all the main offices between. The Signal Corps operates one wire. Mr. Higgins has courteously furnished transportation for the two officers who cover the railroad, but interruptions occur, and when such is the case we must wait until the railroad company gets the lines up.

I believe the service will be bettered by the invoicing of telegraph property direct to district telegraph officers instead of to the supply officers, as heretofore. This idea has been followed out in two cases and will be extended to all telegraph districts when necessary. As the district telegraph officer knows the location of all property in his district, he is in a better position to care for it, and as he is aware of what the property consists, he is better fitted to do the paper work than another officer who might not know a jack strap from an ammeter.

There is a general feeling of confidence in the future of the telegraph division. Officers are studying electricians and fitting themselves for advancement.

A large proportion of the officers and civilian employees have been soldiers, and as such have learned to respect and desire a military title. Our officers feel that the title inspector means nothing, while the corresponding military title means everything. They are in command of enlisted men who respect a military title. It is my sincere belief that the making of these gentlemen into captains and lieutenants would improve the morale of the telegraph division, and thus improve the service.

I respectfully urge that this matter be favorably considered and indorsed by you and brought to the attention of the chief of constabulary.

A cable ship is badly needed in these waters. The signal officer, Philippines Division, has requested that such a vessel be furnished, or that he be authorized to arrange for the hire of a boat for cable purposes. Recent correspondence on this subject shows that an effort is being made to secure such a vessel, and the proper maintenance of the cables makes such a boat a great necessity. There is at the present time a Signal Corps cable between Zamboanga and Siassi which is not in operation for the lack of a properly equipped boat to underrun it. The Signal Corps has all the necessary machinery in Manila. Authority and funds are lacking.

The Manila Trade School has furnished us a number of operators for enlistment, and the men as taken from this school have been trained into fair telegraphers and have attended to business. It is my understanding that the instructor at the Vigan school has left, and what arrangements will be made to provide competent instruction is not known. A number of good students have been drawn from this school during the past year.

The Ilocano makes the best operator, 47 out of the 66 enlisted men being from this tribe. Respectfully submitted.

RUSH P. WHEAT,
Superintendent.

The CHIEF SUPPLY OFFICER PHILIPPINES CONSTABULARY,
Manila, P. I.

HEADQUARTERS PHILIPPINES CONSTABULARY,
OFFICE OF THE ORDNANCE OFFICER,
Manila, P. I., July 14, 1904.

SIR: I have the honor to submit the following report of operations of the ordnance division, Philippines constabulary, for the fiscal year ending June 30, 1904:

During this period the efforts of this division, aside from the supplying and repairing of arms and equipments incident to the service, have been directed chiefly to unifying the equipment of troops and gathering together at Manila all surplus ordnance stores.

Large quantities of stores previously obtained from the Manila ordnance depot have been returned.

The examining of ordnance-property returns of supply officer still forms a most important part of the duties of the ordnance officer, and time has proved its value. It is a great assistance to the auditor and greatly facilitates the settlement of their accounts, the correction of errors, and adjustments of misunderstanding, especially those concerning United States military property.

RECEIPTS OF ORDNANCE STORES FROM UNITED STATES ARMY.

The transfer of ordnance stores by army officers to the constabulary, in compliance with paragraph 4 of General Orders, No. 179, Division of the Philippines, July 20, 1901, as modified by division General Orders, No. 255, same series (which provides that the arms and equipments not yet invoiced to the chief ordnance officer will be turned over to the senior inspector of constabulary of the province wherein they are located, and that the officer transferring them shall invoice them to Capt. David J. Baker, jr., Twelfth U. S. Infantry, assistant chief Philippines Constabulary, Manila), has practically been discontinued, and only two invoices have been received during this period.

On September 28, 1901, the board of officers referred to in a communication from the Chief of Ordnance, United States Army, to determine the price to be paid for the stores transferred to the civil government, was convened by paragraph 9, Special Orders, No. 255, headquarters Division of the Philippines, 1901, and the recommendation of this board were as follows:

"No account then being taken of the cost of transportation, and without reference to the undoubtedly enhanced commercial value of the arms in the Philippine Islands, the board recommends that the following standard of prices obtain:

"1. All revolvers, shotguns, spare parts, and equipments issued from the ordnance depot to the Philippines Constabulary of the civil government, in the condition in which they were

received from the States, and all serviceable shell and ammunition, whether received from the depot or from the troops, to be sold at invoice price.

"2. Colt's revolvers, caliber .45, which, after service, have been repaired here by the ordnance department and issued from the ordnance depot to the Philippines Constabulary, to be sold at a discount of 10 per cent from the invoice price.

"Colt's revolvers, caliber .45, not repaired by the ordnance department here, but turned over to the Philippines Constabulary by officers having them in use, to be sold at a discount of 20 per cent from the invoice price.

"4. Remington shotguns repaired by the ordnance department here and issued from the department, to be sold at a discount of 20 per cent from the invoice price.

"5. Remington shotguns not repaired by the ordnance department, but turned over by officers having them in use, to be sold at a discount of 40 per cent from the invoice price.

"6. All equipments formerly in the hands of the troops or of the police in the Philippines, to be sold at a discount of 50 per cent from the invoice price.

"7. The price of such articles received in future and supplied by the ordnance department especially for the use of the Philippines Constabulary to be that of cost, or cost with transportation added, depending on whether the transfer be regarded as one made to another bureau of the War Department or to another Executive Department under paragraph 753, Army Regulations, 1901.

"8. No account to be taken of the spare parts issued to officers for repair of these arms prior to transfer to the constabulary."

Under the foregoing authorities, the following stores have been received by the Philippines Constabulary, the prices indicated being those obtained under the recommendation of the board, and are in United States currency:

Under recommendation No. 1:

1,000 Colt's revolvers, caliber .45	\$12,000.00
1,534 holsters for revolvers, caliber .45.....	1,211.86
1,200 waist belts.....	504.00
100 artillery saber belts.....	42.00
1,100 waist-belt plates.....	242.00
200 waist-belt plates, noncommissioned officers.....	50.00
500 revolver-cartridge belts, woven, caliber .45.....	500.00
3,000 canteens.....	960.00
25,439 cartridges, brass shells, buckshot.....	1,239.38
8 quarts of cosmoline oil.....	4.00
100 pounds powder, small arm, smokeless.....	85.00
183,430 revolver ball cartridges, caliber .45.....	1,467.44
11 arm chests, revolver.....	71.50
41,974 carbine ball cartridges, caliber .30.....	1,072.86
860 ball cartridges, revolver, caliber .38.....	6.81
Total.....	<u>19,964.96</u>

Under recommendation No. 2:

635 Colt's revolvers, caliber .45.....	6,858.00
--	----------

Under recommendation No. 3:

4,148 Colt's revolvers, caliber .45.....	39,820.80
--	-----------

Under recommendation No. 4:

100 Remington shotguns.....	540.00
-----------------------------	--------

Under recommendation No. 5:

1,604 Remington shotguns.....	6,496.20
-------------------------------	----------

Under recommendation No. 6:

3,857 holsters for revolvers, caliber .45.....	1,523.52
3,092 waist belts.....	649.32
2,762 waist-belt plates.....	203.83
72 cartridge pouches.....	21.60
27 arm chests, revolver.....	54.00

Total.....	<u>2,552.27</u>
------------	-----------------

Under authority per fifth indorsement on O. O. letter 36909223, dated September 20, 1902, and approved by the Secretary of War:

4,000 Springfield carbines, caliber .45.....	32,000.00
410,000 carbine ball cartridges, caliber .45.....	6,970.00
200 arm chests, carbine, caliber .45.....	670.00
1,124 cartridge belts, blue, caliber .45.....	1,124.00

There is a general feeling of confidence in the future of the telegraph division. Officers are studying electricies and fitting themselves for advancement.

A large proportion of the officers and civilian employees have been soldiers, and as such have learned to respect and desire a military title. Our officers feel that the title inspector means nothing, while the corresponding military title means everything. They are in command of enlisted men who respect a military title. It is my sincere belief that the making of these gentlemen into captains and lieutenants would improve the morale of the telegraph division, and thus improve the service.

I respectfully urge that this matter be favorably considered and indorsed by you and brought to the attention of the chief of constabulary.

A cable ship is badly needed in these waters. The signal officer, Philippines Division, has requested that such a vessel be furnished, or that he be authorized to arrange for the hire of a boat for cable purposes. Recent correspondence on this subject shows that an effort is being made to secure such a vessel, and the proper maintenance of the cables makes such a boat a great necessity. There is at the present time a Signal Corps cable between Zamboanga and Siassi which is not in operation for the lack of a properly equipped boat to underrun it. It is my understanding that the instructor at the Vigan school has left, and what arrangements will be made to provide competent instruction is not known. A number of good students have been drawn from this school during the past year.

The Hocano makes the best operator, 47 out of the 66 enlisted men being from this tribe. Respectfully submitted.

RUSH P. WHEAT,
Superintendent.

The CHIEF SUPPLY OFFICER PHILIPPINES CONSTABULARY,
Manila, P. I.

HEADQUARTERS PHILIPPINES CONSTABULARY,
OFFICE OF THE ORDNANCE OFFICER,
Manila, P. I., July 14, 1904.

SIR: I have the honor to submit the following report of operations of the ordnance division, Philippines constabulary, for the fiscal year ending June 30, 1904:

During this period the efforts of this division, aside from the supplying and repairing of arms and equipments incident to the service, have been directed chiefly to unifying the equipment of troops and gathering together at Manila all surplus ordnance stores.

Large quantities of stores previously obtained from the Manila ordnance depot have been returned.

The examining of ordnance-property returns of supply officer still forms a most important part of the duties of the ordnance officer, and time has proved its value. It is a great assistance to the auditor and greatly facilitates the settlement of their accounts, the correction of errors, and adjustments of misunderstanding, especially those concerning United States military property.

RECEIPTS OF ORDNANCE STORES FROM UNITED STATES ARMY.

The transfer of ordnance stores by army officers to the constabulary, in compliance with paragraph 4 of General Orders, No. 179, Division of the Philippines, July 20, 1901, as modified by division General Orders, No. 255, same series (which provides that the arms and equipments not yet invoiced to the chief ordnance officer will be turned over to the senior inspector of constabulary of the province wherein they are located, and that the officer transferring them shall invoice them to Capt. David J. Baker, jr., Twelfth U. S. Infantry, assistant chief Philippines Constabulary, Manila), has practically been discontinued, and only two invoices have been received during this period.

On September 28, 1901, the board of officers referred to in a communication from the Chief of Ordnance, United States Army, to determine the price to be paid for the stores transferred to the civil government, was convened by paragraph 9, Special Orders, No. 255, headquarters Division of the Philippines, 1901, and the recommendation of this board were as follows:

"No account then being taken of the cost of transportation, and without reference to the undoubtedly enhanced commercial value of the arms in the Philippine Islands, the board recommends that the following standard of prices obtain:

"1. All revolvers, shotguns, spare parts, and equipments issued from the ordnance depot to the Philippines Constabulary of the civil government, in the condition in which they were

received from the States, and all serviceable shell and ammunition, whether received from the depot or from the troops, to be sold at invoice price.

"2. Colt's revolvers, caliber .45, which, after service, have been repaired here by the ordnance department and issued from the ordnance depot to the Philippines Constabulary, to be sold at a discount of 10 per cent from the invoice price.

"Colt's revolvers, caliber .45, not repaired by the ordnance department here, but turned over to the Philippines Constabulary by officers having them in use, to be sold at a discount of 20 per cent from the invoice price.

"4. Remington shotguns repaired by the ordnance department here and issued from the department, to be sold at a discount of 20 per cent from the invoice price.

"5. Remington shotguns not repaired by the ordnance department, but turned over by officers having them in use, to be sold at a discount of 40 per cent from the invoice price.

"6. All equipments formerly in the hands of the troops or of the police in the Philippines, to be sold at a discount of 50 per cent from the invoice price.

"7. The price of such articles received in future and supplied by the ordnance department especially for the use of the Philippines Constabulary to be that of cost, or cost with transportation added, depending on whether the transfer be regarded as one made to another bureau of the War Department or to another Executive Department under paragraph 753, Army Regulations, 1901.

"8. No account to be taken of the spare parts issued to officers for repair of these arms prior to transfer to the constabulary."

Under the foregoing authorities, the following stores have been received by the Philippines Constabulary, the prices indicated being those obtained under the recommendation of the board, and are in United States currency:

Under recommendation No. 1:

1,000 Colt's revolvers, caliber .45	\$12,000.00
1,534 holsters for revolvers, caliber .45.....	1,211.86
1,200 waist belts.....	504.00
100 artillery saber belts.....	42.00
1,100 waist-belt plates.....	242.00
200 waist-belt plates, noncommissioned officers.....	50.00
500 revolver-cartridge belts, woven, caliber .45.....	500.00
3,000 canteens.....	960.00

8 quarts of cosmoline oil.....	4.00
100 pounds powder, small arm, smokeless.....	85.00
183,430 revolver ball cartridges, caliber .45.....	1,467.44
11 arm chests, revolver.....	71.50
41,974 carbine ball cartridges, caliber .30.....	1,072.86
860 ball cartridges, revolver, caliber .38.....	6.81
Total.....	<u>19,964.96</u>

Under recommendation No. 2:

635 Colt's revolvers, caliber .45.....	6,858.00
--	----------

Under recommendation No. 3:

4,148 Colt's revolvers, caliber .45.....	39,820.80
--	-----------

Under recommendation No. 4:

100 Remington shotguns.....	540.00
-----------------------------	--------

Under recommendation No. 5:

1,604 Remington shotguns.....	6,496.20
-------------------------------	----------

Under recommendation No. 6:

3,857 holsters for revolvers, caliber .45.....	1,523.52
3,092 waist belts.....	649.32
2,762 waist-belt plates.....	203.83
72 cartridge pouches.....	21.60
27 arm chests, revolver.....	54.00

Total.....	<u>2,552.27</u>
------------	-----------------

Under authority per fifth indorsement on O. O. letter 36809223, dated September 20, 1902, and approved by the Secretary of War:

4,000 Springfield carbines, caliber .45.....	32,000.00
410,000 carbine ball cartridges, caliber .45.....	6,970.00
200 arm chests, carbine, caliber .45.....	670.00
1,124 cartridge belts, blue, caliber .45.....	1,124.00

Under authority per fifth indorsement on O. O. letter 36909223, etc.—Continued.

1,124 cartridge-belt plates, caliber .45.....	\$281. 00
1,876 cartridge belts, gray, caliber .45, with fasteners.....	2,345. 00
Total.....	43,390. 00
Grand total.....	119,622. 23

In addition to the foregoing I have received 3,317 Remington rifles and 96,706 Remington cartridges. These rifles were a part of the arms purchased by the United States Government from the Spanish Government and from the insurgents and were paid for from public civil funds.

ISSUE AND RECEIPTS OF STORES.

During this period the number of requisitions received at this office amounted to 153.

The number of issues of ordnance stores for this period amounted to 147 and the total number of receipts during this period amounted to 177.

The ordnance office has responded most liberally to all demands made and has supplied requisite stores as promptly as possible. No serious complaints have been received from troops of failure to supply them promptly.

In making requisitions the policy to keep each province fully equipped was followed.

In all cases where an officer reported in his requisition a large number of unserviceable articles on hand he was required to explain the reason for not placing them before an inspector.

In no instance was a request for stores returned to an officer because it had not been made out on proper blanks or had not gone through all the channels.

When a requisition was received direct it was immediately remailed to the district commander for his approval.

The provisions of circular letter No. 28, of 1903, enabled all supply officers to turn in to the depot all unserviceable stores on exchange of proper invoices and receipts, and in many instances it resulted in turning in to the depot worn but serviceable stores, and on account of the limited facilities for making repairs the quantity of unserviceable and repairable property has taken up all available store room.

REPORT OF WORK DONE IN SHOPS OF THE ORDNANCE DIVISION.

The following lists of work do not include small jobs, which in the aggregate would certainly increase the amount one-third more.

Armory.—The armory is under an American foreman and it employs eight natives. The principal work is as follows:

Cleaned, repaired, reblued, and oiled: 465 Springfield carbines; 318 Colt's revolvers, single action, caliber .45; 16 Colt's revolvers, double action, caliber .45; 12 revolvers, various kinds, and 6 carbines.

Cleaned, repaired, and oiled: 537 Springfield carbines; 243 Colt's revolvers, double action, caliber .45; 683 Remington shotguns, and 2 Winchester repeating shotguns.

The most important improvement made in this shop is the installation of a bluing plant, for which this office is greatly indebted to Col. A. H. Russell, chief ordnance officer, Philippines Division, for his assistance.

During the past year the facilities for rebluing and repairs were entirely limited to hand work, but about four months ago a contract was let for certain machinery, and the following-named pieces are now being installed, which will greatly add to the quality and decrease the cost of work done: One large Norton emery grinder, one belt-strapping machine, one polishing machine, and one 6-horsepower kerosene engine.

The large foot-power lathe purchased for this division about two years ago will also be run by power.

Bids are now being received by the bureau of architecture for the building, for this division, of one large bluing furnace, which is of the same pattern as the one now used by the Manila ordnance depot.

Harness shop.—The harness shop is superintended by a native foreman and it employs three saddlers.

Owing to the severe climatic conditions of the islands on leather equipments, the work of this shop has been mostly confined to repairs.

All repairs on harness used by the quartermaster division has been made in this shop.

One thousand eight hundred and fifty belts, fair leather, for 12-gauge cartridges, have been converted into belts holding .45-caliber ammunition.

Of the saw-back pack saddles manufactured by this division about a year ago still remain in stock 30 to be completed. These were laid aside in order to give those sent out a thorough trial and fill immediate demand. The reports received from various provinces on their merits and demerits will now enable this division to make a pack saddle satisfactory in every respect.

STORES PURCHASED DURING THE YEAR.

The following is a list of the principal stores purchased:

Springfield carbines.....	1, 500
Web belts, caliber .45.....	3, 850
Canteens, United States Army.....	5, 000
Haversacks, United States Army.....	1, 000
Canteen and haversack straps.....	6, 000
Haversacks, made by contract in Manila.....	6, 000
Ball cartridges.....	450, 000
Brass shells, 12-gauge, for repeating shotguns.....	35, 000
Powder.....pounds.....	1, 000
Leather (1,115 pounds fair, 914 pounds black).....do.....	2, 029

MAINTENANCE OF ORDNANCE DIVISION.

The cost of this division during the past year has been as follows:

Purchase of ordnance stores and material.....	P71, 720. 00
Purchase of machinery as per contract.....	2, 492. 00
Building of one bluing furnace.....	1, 700. 00
Material used in armory.....	847. 49
Material used in harness shop.....	134. 00
Salary of force in armory.....	5, 504. 80
Salary of force in harness shop.....	1, 680. 00
Salary of office force.....	7, 720. 00
Total.....	91, 798. 79

In view of the severe climatic conditions of the islands on all leather equipments and arms, I recommend that a regular allowance of preservative and lubricating oil be established, same to be as follows for a period of six months: Six cans of fair-leather dressing for every 100 leather belts, holsters, and pouches; 3 cans of fair-leather dressing, 1 gallon of neat's-foot oil, and 3 pounds of castile soap for each set of horse equipments; 6 pounds of Cosmoline oil and 6 sheets of emery cloth for every 100 guns.

Before closing this report I desire to mention Mr. J. C. Winebrenner, armorer, who has had charge of the shops during the entire period. In addition to his duties as armorer, he has charge of the storerooms, receiving and packing of stores. He has shown a marked ability in these duties and his energy and efficiency have told in the improved condition of the storerooms and the arrangement of stores. His ability as armorer has been conspicuous throughout.

In addition to the work heretofore mentioned, this office is charged with the registration of all firearms in the archipelago, under Act 610, United States Philippine Commission. This work may be summarized as follows:

Permits issued by constabulary officers to carry firearms under the above-mentioned act since March 25, 1903, 1,799, as follows:

Abra.....	11	Masbate.....	22
Albay.....	142	Mindoro.....	6
Ambos Camarines.....	2	Misamis.....	14
Antique.....	7	Nueva Ecija.....	22
Bataan.....	17	Nueva Vizcaya.....	13
Batangas.....	81	Occidental Negros.....	80
Benguet.....	30	Oriental Negros.....	11
Bohol.....	68	Pampanga.....	90
Bulacan.....	61	Pangasinan.....	85
Cagayan.....	150	Paragua.....	3
Capiz.....	23	Rizal.....	13
Cavite.....	36	Romblon.....	7
Cebu.....	68	Samar.....	33
Davao.....	1	Sorsogon.....	54
Ilocos Norte.....	19	Surigao.....	2
Ilocos Sur.....	17	Tarlac.....	21
Iloilo.....	193	Tayabas.....	26
Isabela.....	4	Zambales.....	44
La Laguna.....	97	Zamboanga.....	5
La Union.....	37	Mindanao.....	5
Lepanto-Bontoc.....	11	Manila.....	36
Leyte.....	68		

Permits issued by provincial governors since the passage of the above act, 1,850, as follows:

Abra.....	3	Misamis.....	106
Ambos Camarines.....	98	Nueva Ecija.....	48
Antique.....	68	Nueva Vizcaya.....	36
Bataan.....	4	Occidental Negros.....	425
Bulacan.....	70	Oriental Negros.....	90
Capiz.....	135	Pangasinan.....	97
Cavite.....	45	Pampanga.....	25
Cebu.....	20	Paragua.....	12
Ilocos Norte.....	45	Rizal.....	8
Ilocos Sur.....	17	Romblon.....	38
Iloilo.....	176	Samar.....	36
Isabela.....	40	Surigao.....	46
Lepanto-Bontoc.....	7	Tayabas.....	34
Masbate.....	5	Tarlac.....	52
La Laguna.....	35	Zambales.....	58
Mindoro.....	1		

The constabulary hold to-day in actual use:

Springfield carbines.....	7,226
Colt's revolvers, double action, caliber .45.....	4,149
Remington shotguns.....	643
Remington rifles.....	879
Colt's revolvers, single action, caliber .45.....	1,582

The municipal police to-day hold:

Remington rifles.....	1,738
Remington shotguns.....	2,376
Colt's revolvers, single action, caliber .45.....	2,540

The following arms are in the hands of individuals to-day:

Rifles.....	979
Shotguns.....	1,365
Revolvers.....	3,461

There are to-day in the constabulary ordnance depot, Manila:

Springfield carbines.....	144
Remington shotguns.....	3,429
Remington rifles.....	1,372
Colt's revolvers, single action, caliber .45.....	1,512
Colt's revolvers, double action, caliber .45.....	980
Colt's revolvers, double action, caliber .41.....	600

There are, therefore, in the archipelago, exclusive of those held by American soldiers and scouts, 7,370 Springfield carbines; 6,448 Remington shotguns; 3,989 Remington rifles; 5,129 Colt's revolvers, double action, caliber .45; 5,634 Colt's revolvers, single action, caliber .45; 600 Colt's revolvers, double action, caliber .41; and other arms as follows: 979 rifles, 1,365 shotguns, and 3,461 revolvers.

This makes a total of 34,975 firearms of which record is kept at these headquarters.

Very respectfully,

JOHN R. SCHULTZ,

Captain, Philippines Constabulary, in Charge of Ordnance Division.

The CHIEF SUPPLY OFFICER, PHILIPPINES CONSTABULARY,

Manila, P. I.

HEADQUARTERS PHILIPPINES CONSTABULARY,
MEDICAL DIVISION,
Manila, July 14, 1904.

SIR: In compliance with your memorandum of July 12, 1904, I have the honor to submit the following:

June 30, 1903, the medical division, Philippines Constabulary, consisted of 3 captains and surgeons together with 7 lieutenants and 35 enlisted men detailed for duty with the division. Up to this period the assistant chief supply officer bought, and the quartermaster accounted for, all medicines and medical supplies. Act 807 provided for a fourth captain and surgeon. General Order, No. 66, current series 1903, created the medical division as a separate division,

consisting of 1 captain and surgeon, superintendent of the medical division and first district surgeon; 3 captains and surgeons, 10 lieutenants and medical inspectors, and 103 enlisted men. Act 1049 provided for its expenses as a separate division and fixed its personnel as given above until June 30, 1904.

June 30, 1903, the enlisted men were attached to the constabulary hospitals and Manila dispensary undergoing instruction in first aid to the wounded, nursing, dieting, etc. Since that time they have been sent to provinces for duty, and on June 30, 1904, were distributed as follows:

First district.—Tarlac, 5 (hospital detachment); Pangasinan, 2; Zambales, 2; Nueva Ecija, 2; Nueva Vizcaya, 2; Bataan, 2; Bulacan, 2; La Laguna, 2; Cavite, 1; Batangas, 1; Rizal, 1, and Manila garrison, 6—total, 28 men.

Second district.—Tayabas, 4 (hospital detachment); Sorsogon, 2; Romblon, 2; Mindoro, 2; Ambos Camarines, 2, and Albay, 5 (hospital detachment)—total, 17 men.

Third district.—Iloilo, 6 (hospital detachment); Antique, none; Capiz, none; Negros Occidental, none; Negros Oriental, none; Cebu, none; Leyte, 2; Samar, 2; Surigao, none, and Misamis, none—total, 11 men.

Fourth district.—Abra, 2; Ilocos Norte, 1; Ilocos Sur, 8 (hospital detachment); Cagayan, 2; Isabela, 4 (hospital detachment); Lepanto-Bontoc, 1, and La Union, 1—total, 19 men.

Exposition battalion.—St. Louis, 2 men.

It will be seen that in the first, second, and fourth districts there is in every province one or two hospital corps men who are capable of giving first aid to the wounded and treating many of the minor complaints of constabulary soldiers.

Statement of supplies bought and expended.

On hand June 30, 1903.....	P 5, 100. 20
Received during the fiscal year 1904.....	5, 396. 45
	10, 496. 65
Expended during fiscal year 1904.....	7, 731. 44
On hand June 30, 1904.....	2, 765. 21

The above supplies comprise all medical supplies, hospital stores, disinfectants, furniture and bedding, surgical instruments, dressings, etc., used by the medical division.

There are at present 7 hospitals and 2 wards located, with capacity as follows:

	Beds.
First district:	
Tarlac.....	20
Manila garrison (ward).....	10
Second district:	
Lucena.....	20
Albay.....	25
Nueva Caceres (ward).....	15
Third district:	
Jaro.....	40
Borongan, Samar.....	20
Fourth district:	
Vigan.....	30
Ilagan, Isabela.....	20

The fifth district has as yet no part of the medical division.

June 30, 1904, there were being established 5 hospitals and 1 ward, with an approximate bed capacity of 125 beds. During the fiscal year 1904 there were treated in constabulary hospitals 8 officers, 1,282 enlisted men, and 42 civilians—total, 1,332. Number of days lost in hospital: Officers, 58; enlisted men, 14,995; civilian employees, 456—total, 15,509. The treatment given in constabulary hospitals would have cost, if given by the military hospitals, P 11,556. Number of deaths in constabulary hospitals since June 30, 1903, 26. This, with the many cases treated in "quarters" and attended outside the hospitals throughout the provinces, comprises the work of the medical division.

The division is small and not at all adequate to the need of the constabulary, but the hospitals established have, it is believed, met the demands made upon them. The native soldier has proven quick to learn the duties required of him as hospital corps man. There has been but one instance brought to my attention where he has not exceeded all reasonable expectation in his efficiency. I wish especially to commend the work of the surgeons of the second and fourth districts, Capts. J. M. Wheate and T. C. Walker. The work is well organized in those districts and the efficiency and care of the district surgeons are felt in this office in all official communications with those districts.

The third district has not been so well managed in the medical division, except the work of the hospitals, which has been excellent.

The constabulary should unquestionably have a medical officer in every province, but as this would necessitate a great increase in the expense of the bureau it is, under the present circumstances, impracticable. Much has been said in official communications regarding the relations of the work in the provinces of the physicians of the board of health and the medical officers of the constabulary. This is a subject that deserves consideration. Except in those provinces where constabulary medical officers are stationed, the constabulary must depend upon the provincial doctors in all serious cases, and the services of these doctors have seldom been available, and when available, their refusal to use medicines that have been provided by the constabulary have often necessitated large expenditures for prescriptions. In fact this dependence for medical service has been almost wholly unreliable.

Legislation has been proposed authorizing the appointment of constabulary medical officers, where graduates in medicine, as presidents of provincial boards of health, and providing for the payment to them for this work \$45 per month, thus saving to the province from \$400 to \$1,000 per annum. I would respectfully urge the passage of this bill for three reasons: It is in the interests of economy; it will promote the efficiency of the medical division of constabulary by making it possible to secure competent physicians for medical inspectors, and it will improve sanitation in the provinces, and improve the work of the board of health in the provinces.

The number of officers and enlisted men treated in military hospitals can not be given at the present time, as this data must be obtained from records in the paymaster's office and he can not now furnish same.

Very respectfully,

W. P. BAKER,
*Captain and Surgeon, Philippines Constabulary,
Superintendent Medical Division.*

The CHIEF SUPPLY OFFICER, PHILIPPINES CONSTABULARY.

HEADQUARTERS PHILIPPINES CONSTABULARY,
OFFICE OF THE COMMISSARY,
Manila, P. I., July 15, 1904.

SIR: I have the honor to submit the following report covering the operations of this division during the fiscal year 1904:

The exact financial status can not be determined at the present writing as 9 provinces have as yet not been heard from. I have attempted to communicate with them by wire, but communications have been so interrupted during the past week that I have been unable to receive any reply. In addition to this the quarterly statement from the auditor has not been received.

The Manila depot shows the following transactions: Purchases, P637,147.89; transfers, P485,083.55; sales, P213,990.84.

The outstanding bills at the end of June amounted to P45,660.19. A rough estimate places the value of stores that have been damaged during the fiscal year at P30,000, while the cost of transportation approximates P40,000. Salaries and wages, including clerks and laborers, P26,000.

The financial statement submitted covering the operations including April 30, 1904, showed an indebtedness of this division of P104,862.65. A limited amount of purchasing was done during the last quarter, with an idea of cutting down this indebtedness. However, the amount due contractors at the end of June amounts to almost the entire purchases for the months of May and June; in other words, the contractors have not been paid for the goods delivered during these months, some of which have been disposed of.

I do not doubt but that we could obtain better prices if we had sufficient capital to meet all obligations promptly. As it is, contractors figure 1 or 2 per cent interest on their money to cover the delay in payment of their accounts.

To cover the present business of this division, additional capital is necessary. I have given this matter considerable thought, but can not see how I can bring about the success desired without at least P100,000 additional capital.

The need of additional clerical force has already been brought to your notice in my communication of recent date, and I understand it has already been submitted to the Commission; therefore, I will not remark further on that subject.

Attention is invited to the exhibits hereto attached, and marked A, B, and C.

Very respectfully,

ASA F. FISK,
Captain and Commissary.

The CHIEF SUPPLY OFFICER, PHILIPPINES CONSTABULARY,
Manila, P. I.

HEADQUARTERS PHILIPPINES CONSTABULARY,
OFFICE OF THE PAYMASTER,
Manila, P. I., July 18, 1904.

SIR: I have the honor to hand you herewith a tabulated statement showing the total disbursements and transfers, by months, made by this division during the fiscal year 1904. This statement shows as nearly as possible the cost of maintaining the constabulary during that period; however, as there are still many outstanding obligations, a complete statement of the cost can not at this time be given. It is hoped that by September 1 all such obligations will have been settled.

Until the beginning of the fiscal year just closed, no attempt appears to have been made to keep an intelligent record of the cost of any particular item for which funds were appropriated; no comparative statement, therefore, can be submitted. With the items and divided subheads of appropriations sifted down to a settled basis, it is the aim of this division to be able to state the monthly or yearly cost of each such item; it will then be possible to show, by comparison, where expenses can be most advantageously reduced. In order, however, that a thoroughly reliable and accurate statement can be made, it will be necessary to have the hearty cooperation of all the supply officers; with this in view a circular is now being drafted, which will shortly be submitted for your consideration, in which a monthly report showing the amount disbursed under divided subheads to be rendered by each supply officer is contemplated.

Under the total disbursements shown on the accompanying statement are included P 2,488.60 paid for the treatment of our officers and enlisted men in military hospitals; P 7,593.94 for transportation of funds, quartermaster and ordnance supplies (this, of course, does not include the amounts disbursed by supply officers); P 3,061.49 for transportation of telegraph and telephone supplies, and P 5,007.27 for transportation of commissaries. It is reasonable to suppose that much saving has been made in the last three items during the last fiscal year, owing to the constant use of the coast-guard vessels. With a total of 3,274 paid vouchers, 555 transfers of funds, 2,891 communications received and 3,762 sent; with P 1,217.94 collected under the special funds provided in section 14 of Act 619, as well as the 10 per cent deduction from the monthly salaries of the sixty-odd employees appointed in the United States under the provisions of Act 643, the clerical work has been heavy and at times trying. Too much praise can not be bestowed upon Lieutenant Thomas, Mr. Headington, and Mr. Robinson, whose untiring efforts and comprehensive knowledge of their duties made these results possible.

Very respectfully,

A. J. ROBERTSON,
Captain and Paymaster, Philippines Constabulary.

THE CHIEF SUPPLY OFFICER, PHILIPPINES CONSTABULARY,
Manila, P. I.

HEADQUARTERS PHILIPPINES CONSTABULARY,
OFFICE OF THE QUARTERMASTER,
Manila, P. I., July 14, 1904.

SIR: I have the honor to submit the following report of the work of this division for the fiscal year ending June 30, 1904:

July 1, 1903, found the quartermaster's division with Captain Ross, assistant chief supply officer, holding the position of quartermaster in addition to the duties of his other office and unable to give the work of the division the attention necessary to institute any reforms, or in fact to do much else other than sign the papers. This officer recognized the loose

methods in vogue in the transaction of the business of the division, but by reason of having to fill two positions, either of which was enough for one officer, was unable to give this division much personal attention.

The present incumbent relieved Captain Ross as quartermaster August 1, and immediately set about familiarizing himself with the methods then extant. No changes were made for about a month, the quartermaster desiring to learn all of the good and bad features of the office in order that any changes that might be made would be in the right direction. To accomplish this the quartermaster took personal charge of the office and assumed all the duties that naturally fall to a chief clerk. In no other way could the quartermaster have obtained the results desired, for no one can presume to criticise a system or re-systematize any business, public or private, without first being able to do the work of each individual clerk in the establishment, or at least know just what is required of all clerks. There are many desired changes that have not yet been consummated, but as a whole the efforts put forth during the past year have been fruitful of good results.

It was found that the records of the office were kept in such manner that very little information could be had from them without a long search in each case, as the several kinds of work which had very close relations in the actual accomplishment had no connection in the records. This has nearly all been rectified to such an extent that now all such matters are not only well connected in the quartermaster's office, but all transportation settlements made by the paymaster are so connected in the records of the quartermaster that he can tell just where the voucher is filed in the records of the paymaster's office. It is hoped that shortly we can find time to institute a better system of record that will give us the same connection with the records of the chief supply officer's office with regard to requisitions on the insular purchasing agent, contracts, and a few kindred transactions.

One of the first observations of the present quartermaster was that too much money was being paid out for commercial transportation, but that was something unavoidable under the system in force prior to August 1, during the incumbency of two former quartermasters, the first of whom would not stay in his office and attend to same personally and the second who unavoidably had more than one position to fill.

As soon as this became apparent to the undersigned he transferred Lieutenant Snodgrass from office work and gave him full charge of all coast-guard shipments, which arrangement resulted in a great saving in freight charges. Besides this all commissaries carried via coast-guard vessels have been transferred in cascos direct from the bodega to the ship's side at a great deal less expense than it formerly cost to truck the same to commercial vessels.

The following is a statement of the freight handled during the fiscal year:

	Pounds.
Via deep-sea commercial boats.....	1, 553, 430
Via commercial launches to Bataan, Cavite, Rizal, and Laguna provinces.....	337, 045
Via railroad.....	1, 679, 697
Via coast-guard cutters and launches and constabulary launch <i>Lt. Naddo</i>	4, 149, 313
Total.....	7, 719, 485

This is an aggregate of more than 3,859 tons.

There were 2,350 shipments made during the fiscal year, which is an average of more than 7 for each working day.

Included in the above shipments were funds to the aggregate of ₱1,602,142.64.

It will be seen that more than half of the freight handled was shipped via government vessels, and of the remainder less than half was handled via deep-sea commercial boats, the greater part of that not handled by government boats being shipped by the railroad or via commercial launches to points that could not be reached by any of the coast-guard fleet. The above comprises all shipments made by the quartermaster for the pay, telegraph, ordnance, medical, commissary, and quartermaster division during this period, but does not include the many shipments of freight received in Manila from the supply officers in the provinces. There have been some few shortages and stray packages reported, mostly commissaries, but nearly all have been cleared up readily. The greater part of the freight carried by commercial boats was iron telegraph poles, which the coast-guard fleet could not handle.

The undersigned desires to express his great appreciation of the courtesy and cooperation accorded the constabulary by the chief of the bureau of coast guard and transportation and his many subordinate officers, and to request that due credit be given that bureau for the great assistance which it has been to the quartermaster of constabulary in making this economical showing possible. It is impossible to state anywhere near the amount of money that bureau has saved the constabulary in passenger fares alone between their many ports of call, but it is safe to say "several thousands of dollars."

It is with regret that the undersigned must state that there have been a number of complaints from officers of the constabulary regarding the coast-guard service, and this regret is made more keen because nearly all of the complaints have been found to be the result of our own officers' noncompliance with coast-guard rules, even after the same have been made plain to all in many ways.

Prior to August 1, and before this bureau began to use coast-guard vessels to such a great extent, the shipments made were largely in commercial vessels, which necessitated very heavy trucking across the city of Manila, and it was necessary that a large proportion of this trucking be hired, as the bureau had but four escort wagons and was unable to handle it all itself. The change to coast-guard vessels made it possible for the bureau to do all of its own trucking for the balance of the year, except upon the occasion of our removal from Calle Cabildo to Paco. During the months of December, January, and February this was a very hard task, for on December 1 the insular purchasing agent ceased to supply public institutions with commissaries and the civil supply store (constabulary commissary) began to supply them, making it necessary that the quartermaster division make the deliveries.

This additional call upon the land transportation of the quartermaster became more than he could handle, and since the close of the period mentioned the heavy transportation has been increased from four wagons to six wagons and two trucks.

With the transportation now in use this division is able to handle all of the work placed upon it, and it is thought that no increase need be thought of during the present fiscal year.

Of the increase in transportation cited above, the two trucks were added by purchase, but the two escort wagons were transferred from the provinces and rebuilt by the employees of this division, as was also the wagon furnished the Manila garrison.

Another large item of expense was found to be the hire of cascos for the handling of freight to coast-guard boats in the bay. That has now been all done away with and the cost reduced to the minimum by handling everything by our own lighter and cargo boats which have been purchased during the year.

Besides the means of transportation purchased for the use of the quartermaster here in Manila, we have also received 50 aparejos for the pack train, about 30 of which have been in use on the Benguet trail and have done good service.

Twelve light spring wagons, 14 carratelas, and 13 carratones have been purchased for the provinces.

Six combination passenger and freight wagons, known as excursion wagons, have been purchased for the provinces, four of which are as yet undelivered by the contractors.

We have also furnished the provinces with six cargo and one sailing boat from this depot during the year.

In addition to the above there have been many vehicles and boats purchased by the several district supply officers, the number of which is not known in this office. As a whole there has been a very extensive increase in means of transportation throughout the islands.

Regarding animals the undersigned can not tell how many have been purchased, as all except four American draft animals have been taken by Lieutenant Dean.

The register which the undersigned has caused to be prepared for the information of this depot now shows the constabulary to possess, in the entire archipelago, means of transportation as follows: Two excursion wagons, 25 carromattas, 29 carratelas, 13 escort wagons, 2 ambulances, 13 light spring wagons, 2 trucks, 3 quilez, 1 double-seated trap, 1 calesin, 32 carretones, 2 dump carts, 34 small boats of all kinds, 1 gasoline launch, and 1 forty-ton lighter.

There has been a general complaint from officers in the provinces regarding the stationery allowance, and although the undersigned has sent more than the allowance to most provinces during the last six months the complaints continue to come in. It is therefore recommended that the allowance of rubber bands, pens, envelopes, and paper be at least double; that the ink allowance be reduced, and that the allowance of penholders be done away with. The ink allowance is a great deal too large, and penholders should be asked for by the supply officer only in quantities actually needed.

The following is a statement of clothing handled by this depot during the year:

	On hand June 30, 1903.	Received since June 30, 1903.	On hand June 30, 1904.

During the past year the chief difficulty that has been encountered in the direction of administration has been in securing good supply officers at the present rates of pay. Where these officers are efficient, the work of supplying the constabulary with its different wants and the insular and provincial officials throughout the archipelago with commissaries has been satisfactory. It would therefore seem that both theoretically and practically the system is correct, and with the proposed increase of pay applicants of more skill for this particular work will present themselves.

Under the provisions of the proposed legislation granting premiums to officers learning native dialects, it will be made incumbent upon them to take up the study of at least one of the principal dialects. The importance of direct conversation by constabulary officers with the Filipinos can not easily be overestimated.

A more complete system of inspection is being devised to meet the requirements of the wide distribution (200 posts) of the constabulary. This inspection will have for its object not only measures productive of cohesion and discipline, but it will be in the nature of instruction, especially such as relates to the purely civic duties of officers and their relations to other officials and the people.

The tariff has been made applicable to supplies intended for constabulary use, and the cost of maintenance is correspondingly increased. In spite of this, however, the cost per man per year has but slightly exceeded \$250.

With the improved conditions now existing in the archipelago, the constabulary in all its ramifications is being subjected to measures that will insure a higher standard of efficiency. The loyalty of the Filipinos to the authorities paying, feeding, and sheltering them has been highly gratifying.

No element is more potent in maintaining order in these islands than the liberal use of telegraphic communication. The transfer of the military lines to the civil government is being slowly but surely effected. The rate of transfer will largely depend upon the funds made available by the Commission. The cordial cooperation of Major Maxfield, chief signal officer of the division, with the constabulary telegraph division has greatly facilitated the work of the latter. The importance of a cable ship for repairing existing lines, as well as for laying new ones, has been duly reported to higher authorities. In an archipelago like this, government and commercial needs are largely dependent upon such a ship, and its acquisition is earnestly requested.

Very respectfully,

HENRY T. ALLEN,
Brigadier-General, U. S. Army, Chief of Constabulary.
The SECRETARY OF COMMERCE AND POLICE,
Manila, P. I.

SUPPLEMENTAL REPORT, JULY 1 TO SEPTEMBER 2, 1904.

HEADQUARTERS PHILIPPINES CONSTABULARY,
Manila, P. I., September 22, 1904.

SIR: In accordance with your verbal instructions, I have the honor to submit herewith a report up to date supplemental to my annual report for the fiscal year ending June 30, 1904.

By virtue of the instructions of the Commission, and as a result of the recent annual appropriations act, the constabulary force must be reduced from an authorized strength of 7,500 (actual strength of 7,200) to 6,200 by the end of June, 1905.

In the execution of this measure (to make good the diminution of the constabulary by 1,000 men) the scout companies that were already under the civil government have been further divided by assignment to a greater number of stations, and six additional companies of 100 men each (eighteenth, thirty-fifth, thirty-sixth, thirty-seventh, thirty-ninth, and fortieth) have been asked for and taken over by the undersigned.

At present the constabulary occupies 207 posts, the scouts 65.

General Orders, No. 99, War Department, extract of which follows, has greatly facilitated the use of scouts by simplifying the command:

Whenever it becomes necessary in the execution of the statute above cited to direct the travel of officers, or the movement of companies or detachments of Philippine Scouts which have been placed under the command and control of the chief or assistant chiefs of the Philippines Constabulary, the orders directing such travel of officers or movements of troops will be issued by the chief of the Philippines Constabulary or by an assistant chief, if the travel or movement is within the limits of the district under his charge and control. The cost of transportation of troops and the reimbursement of expenses incurred in travel will constitute a charge upon the appropriations for the support of the Army, and will be accepted and paid by officers of the Pay and Quartermaster's Departments as if issued by the commanding general of a territorial division or department.

* * * * *

The chief of the Philippines Constabulary will submit, in advance, quarterly estimates of the funds needed under the several heads of appropriation for the movement of troops or for the mileage of officers for the purposes hereinbefore indicated. These estimates will be forwarded to the commanding general, Philippines Division, through the civil governor of the Philippine Islands, and will be embodied in the estimates forwarded to the War Department by the chiefs of the proper departments of the staff in the Philippine Islands. They will be restricted to the amounts necessary for the efficient performance of the duties enjoined in the statute above cited.

I urgently invite attention to the recommendation made in my annual report regarding the necessity of more company officers for scouts, and also battalion commanders to properly supervise both field and administrative work of the numerous small garrisons. It is hoped that the other measures recommended concerning same subject may receive favorable consideration.

Under the constabulary act of Congress, assistant chiefs of constabulary who are not army officers may not command scouts. This law and the absence of three assistant chiefs (two of whom are army officers) have made it necessary to assign both Captains Rivers and Dade, of the United States Cavalry, specially desired by the civil governor for inspection service, to command respectively the second constabulary district and to take charge of field operations against the fanatical Pulajanes in the mountains of Cebu and Samar.

As the term of enlistment of all the scouts expires this year, and nearly all of them during the present month, the establishment of new posts has taken place at a most inconvenient time.

The cooperation extended by General Wade, through his acting chief of staff, Major Mann, and by General Randall, commanding Department of the Luzon, in which most of the scouts are serving, is radically minimizing the difficulties.

Under the provisions of the new appropriation act, the average pay of constabulary lieutenants was increased by \$50, and an additional \$50 made available for those officers who learn any one of the leading Filipino dialects.

DISTURBANCES.

In the first district ladrone bands are being continually decimated. At present much smaller detachments may be safely used in their extermination. Depredations since last report are practically nil; on the other hand, various fragments of bands have been struck, and many captured ones have been duly sentenced. Judge Crossfield, of the court of first instance, states that since the decisive fight against San Miguel's force, two years since, in which the general was killed, he has sentenced 550 of the organization captured from time to time.

Under the present disposition of the scouts and constabulary large ladrone bands can not exist, nor can the few bandit chiefs still out keep their men together. Such a condition of tranquillity has never before existed in this district. It does not follow, however, that the country in general, much less the mountainous regions, is entirely free from armed ladronism.

San Felipe Salvador, one of the popes of the Philippines, still hides in the Candaba swamps, and has a considerable following among the ignorant, his armed bands, under two or more small leaders, having in all about twenty-five firearms. The latest from this militant church dignitary is contained in the following copy of letter taken from one of his captured apostles:

[Translation.]

SEPTEMBER 2, 1904.

Señor DIONISIO VELASQUEZ:

My dear brothers in the Santa Iglesia (Holy Church), to whom I have intrusted all the companies: My purpose is to request you to try to assemble all our brothers in this Katipunan, beginning this date, the second day of September, 1904. Endeavor to assemble all the soldiers, and as soon as you have complied with your work, please send me a communication, in order that you may know of my great desire to comply with our needs.

I therefore request you to do all you can in order that we may have our self-government within the month of October.

Without anything further to say, may God keep you safe for many years.

FELIPE SALVADOR.

The second district is, generally speaking, very quiet. The killing of Roldan, and the complete extermination of his band, as set forth in the following telegram from Lieutenant Cheatham, of the scouts, has freed the Camarines-Tayabas border country of a great scourge:

Returned from mountains at 1.30 this morning with the dead bodies of Roldan and three others of his men; also 21 prisoners, 7 guns, and 2 revolvers, a few bolos and small amount of ammunition. This was all he had except 1 revolver. Roldan positively identified.

This leaves Saria's armed band in the Albay volcano district with about 11 guns, and an armed band in the Capalonga district in the northwest part of Ambos Camarines with probably fewer guns.

In the third district the pulajanes of Cebu, Samar and Leyte have broken out and are giving considerable trouble. Pulajanism seems to be a resentment of the mountain people against the lowland people, of the cultivators of the soil against the townspeople who purchase their products, for real or fancied oppression, expressed in

the only way with which they are acquainted. Their ignorance prohibits recourse to law. There are always agitators who profit by this discontent to urge these ignorant people on to barbarous deeds. The fanaticism of these people is also exploited to its ultimate limits, with the result that when a town is attacked the most horrible atrocities are committed.

The recrudescence of this agitation in the three mentioned Visayan provinces at the same time would indicate some concerted action. The subject is being carefully investigated.

In the province of Leyte, operations have been restricted to a small section of mountain country tributary to Ormoc. It was here in an attack on a small mountain fort that Captain Barrett was killed by a slug from a bamboo cannon on the 25th of August last.

In Cebu the uprising began by an attack on the town of Pinamungajan, where the fanatical mountaineers killed 1 man, wounded 3, and burned 125 houses, including municipal buildings with all records.

To assist the constabulary the Thirty-sixth Company of scouts was put at Naga on the east coast, and the Thirty-seventh Company at Toledo on the west coast. The command of all operations in the province was given to Captain Dade, U. S. Cavalry, inspector-general Philippine Constabulary.

Two stations, about 20 miles apart, have been established in the range of mountains extending throughout the province from north to south, one connected by wire from Toledo on the west coast and the other by wire from the city of Cebu. Since early Spanish days these mountaineers have willfully failed to respond to the aspirations of the government. Many of the 200,000 people involved in the region in question would gladly be freed from the Pulajanes, as shown by the voluntary aid they are rendering in building nipa quarters and barracks for these stations and in cutting a trail between them.

Numerous detachments are kept in the field and much punishment has already been meted out. In spite of this the following telegram, dated September 20, shows that the punishment has not yet been sufficient:

Pulajanes entered Asturias this morning 100 to 200 strong, 8 rifles, 2 cannon, killing 3 native volunteers and burning about 30 houses. Pulajan casualties, 2 killed and 6 wounded.

In Samar Pulajanism has reached its greatest development. A few years since there were two rival factions of fanatics in this province, one under Anugar called the "Dios Dios" sect, the other under Pope Pablo called the Pulajanes. At present this distinction does not exist, and all are called Pulajanes (the Red-trousers.)

The following telegram from Major Crawford gives a good understanding of the character of the Pulajanes and their methods. No people in the Philippines, not excepting the Moros, have shown more deadly work with the bolo than have the mountaineers of Samar:

Return from Gandara. Brought in Bowers and Schreiner from nine days' locating central headquarters Pulajanes, on Magpapgao range north of Cagtotoy. Bowers captured outpost and valuable information. Morning 21st he sent 35 women and children, Pulajanes, with 13 constabulary down river. Crockett followed with 15 men. Below Bulao, Pulajanes with 25 guns, 100 bolos, both sides river, called to women prisoners to escape, upsetting barotes, which they did; constabulary fought in water, expending about 30 rounds ammunition apiece; 7 constabulary shot through head, 1 in body, other 5 escaped; lost 11 guns; very deep water. Crockett unobserved landed and got within 30 yards of riflemen; volleyed, and volley returned, wounding 6 Crockett's men in feet and legs. First volley Crockett's shoulder straps centered attack on him. He killed 5 with his shotgun as he fell, boloed.

Killed the captain of Pulajanés, who with 3 others fell dead over Crockett, saving his life. Courage and discipline alone saved Crockett's men from annihilation. Crockett and wounded men joined in chase of Pulajanés. At scene 23 dead Pulajanés. Other detachment, first fight in boats killed 13. There were 10 cargadores and 2 women killed. Bodies of all constabulary, with their belts on, recovered from river last night; buried with honors. Crockett captured 4 guns, 500 Krag ammunition. Sent this evening Schreiner, Hemmitt, total 45, to Oquendo to work to Gandara. Pulajanés in fight were of Bunoyan battalion. Prisoner reports arrival of Catubig raiders in Magpao.

On September 1 a detachment of scouts under Lieutenant Overly of the Thirty-fifth Company was attacked in the early morning near Mount Bunayan by a band of about 100 bolomen and 2 riflemen. In this engagement Sergeant Menicke, of the Hospital Corps, and 2 scouts were killed and 2 were wounded. One Springfield carbine was lost, but 2 Springfields were captured, besides 10 bolos and ammunition. Ten Pulajanés were killed. Sergeant Menicke died from a bolo wound.

On September 7 Lieutenant Clearman, commanding Thirty-ninth Company of scouts, had an engagement with about 300 Pulajanés, under Pedro de la Cruz, after which 74 were found dead on the ground.

Many other small engagements have taken place, in which both scouts and constabulary have given a good account of themselves.

At the time of writing this the Pulajanés have been compelled to quit the valleys of the Gandara and the Catubig and the tributary country thereto, going to the east coast where they have destroyed several nipa barrios.

There are at present 600 troops, equally divided between constabulary and scouts, engaged in this large mountainous island in bringing about order.

An additional scout company is under orders for the town of Taft (Tubig) on the east coast, and also a detachment of Moro constabulary. This will be the first trial made of Moros outside of their own country. Favorable results are anticipated.

Though stripped of most of his men and arms Pope Isio continues to escape the agents of the law in the mountain fastnesses of Negros. He has changed the name of his followers from Babaylanes to the more modern one of Pulajanés.

In the fourth district conditions remain quiet. A few small fights between rancherías or towns of the wild tribes have been reported, especially between the Igorrotes of eastern Bontoc and northern Nueva Vizcaya.

The following telegram of September 20 shows trouble near the Bontoc-Cagayan frontier:

Lieutenant-Governor Folkmar wires that Lufo, on Cagayan border, with 20 guns, burned Dacalan on 12th and decapitated 8 people. He suggests cooperation with Bontoc from Lubungan to Lias, and then go after guns at Mayoyao and Sibley, making a general clean up of that region.

The present policy of enlisted factions of warring rancherías into the same organization will in time destroy existing feuds with the accompanying practice of taking heads. The Igorrotes possess elements indicating that they have a future in the coming development in the islands.

In the fifth district the work of drilling and instructing the Moros continues.

The Cotabato Valley is the most disturbed portion of the Moro district. The limited use of Moro constabulary against Moro outlaws has proved satisfactory.

In the Moro country, more than in any other part of the archipelago, time is a most important factor to be considered in the solution of the problem—the civilization and education of the population.

The successful work of Captain Gallant, Philippines Constabulary, in breaking up the bands of religious outlaws in Misamis deserves special mention. In the first period of this small uprising we had 2 constabulary killed and 1 wounded, while the outlaws had 18 killed and a large number captured, of whom 70 have already been sentenced to Bilibid. During August the same element attacked a barrio near Nauan, killing 4 and abducting 20 others. As a result of this 4 outlaws were killed and 100 were captured and are held in jail awaiting trial. About 40 outlaws of this band still remain at large.

Various minor engagements and expeditions into hostile Moro country have been made by constabulary officers and detachments, some independently and some in connection with United States troops, in which the constabulary has had several casualties.

In spite of Pulajanism and the disturbances in Mindanao, a tremendous stride in peace conditions has been made since the beginning of the calendar year. Greater progress in this direction could not justly be expected.

The collector of customs has agreed with the undersigned to permit the use of customs cutters stationed at Iloilo, Cebu, Sorsogon, Jolo, and Puerto Princesa for transportation of constabulary and scouts as long as the visiting of the principal towns of the several customs districts once per month is not interfered with. This offers a decided advantage for improvement of inspection service, and will give senior inspectors opportunity to make great savings of time in patrolling localities difficult to reach by land.

Very respectfully,

HENRY T. ALLEN,
Brigadier-General, Chief of Constabulary.

Hon. W. CAMERON FORBES,
Secretary of Commerce and Police.

REPORT OF THE FIRST DISTRICT, PHILIPPINES CONSTABULARY.

HEADQUARTERS FIRST DISTRICT, PHILIPPINES CONSTABULARY,
Manila, P. I., June 30, 1904.

SIR: I have the honor to submit the following report of operations and conditions in the first constabulary district for the year ending June 30, 1904:

The district comprises the following provinces: Bataan, Batangas, Bulacan, Cavite, Laguna, Nueva Ecija, Nueva Visaya, Pampanga, Pangasinan, Rizal, Tarlac, Zambales.

The great majority of the inhabitants of the first district are Tagalog. They have a more restless disposition, more political ambition and are more warlike than any other tribe. They inhabit the provinces adjacent to Manila, where nearly all political and seditious plots originate. It is, therefore, but natural to expect that incipient disturbances will occur from time to time, until these people have learned to respect the Government which is doing so much for their advancement.

Under the guise of patriotism, and a pretense to be fighting for national independence, certain bands of outlaws have given more or less trouble since the termination of the insurrection in the islands. The bands generally are led by persons who, due to former crimes, are compelled to follow the lives of bandits to escape capture. They have been unable to attach to themselves a class of ignorant followers and criminals who prey upon the people who are disposed to live respectable and law-abiding lives.

While these bands proclaim themselves patriots, they do not hesitate to rob and steal when there is opportunity, and frequently murder those who fail to submit to their demands, or give to the authorities information concerning them.

There are other bands who make no pretensions to be any thing else than robbers.

Still other bands are religious fanatics, who incidentally compel the inhabitants of neighboring barrios to feed them, and do not hesitate to take possession of any money or other personal property, such as animals, jewelry, etc., which diligent search will place within their reach.

In certain sections, organized carabao stealing is in vogue, and I regret to state that in some instances our investigations have shown that the principal manipulators in this "industry" are men in whom the government has placed some confidence. The method of operating is generally as follows: A common carabao thief steals the animal, drives it into the mountains, rebrands it and keeps it there for a certain period, then sells it to a middleman who obtains forged registration papers of ownership from an expert for a consideration, or induces a dishonest presidente to issue false registration papers. The animal is usually driven into an adjoining province for this purpose. With changed brands and certificates of ownership the animal is now ready for the market, where it brings a handsome profit. Many of them reach the markets in Manila. Of course the constabulary capture many of these animals while in the transition period. The large number recovered during the past year, as shown in tabulated appendix to this report, is thus accounted for. There is still another species of carabao thief who makes no pretension to go through with the foregoing operation, but simply steals the animal, hides it and, through a third party, demands a ransom for its return. It is occasionally our good fortune to catch the person thus manipulating the deal, who, to save his own skin, gives such information that enables us to catch the thief and recover the animal.

A band of thieves in Batangas Province, in addition to the above, went so far as to demand a tax of 5 pesos a head on each animal, over quite an extended section, as a guarantee that the animal would not be stolen. It was found that many persons had paid this tax, believing that it was the simplest and easiest way to insure immunity of the animal against theft. These persons afterwards refused to give any information, having been threatened with death if any part of the transaction was divulged. I am glad to report that at present we are making considerable progress in breaking up this practice and catching the guilty parties, among them the chief of police of Lipa and several officeholders of the pueblos of Batangas and Laguna provinces.

Animal stealing is not a new industry in the islands. The Spaniards coped with the same difficulty for generations, and it is believed that we are making better progress in stopping it than they ever did. The Commission has recently enacted legislation which will materially assist in stopping it, and it is believed that if, during the reregistration of animals, a special paper is provided and used, which can not be counterfeited, we will have taken a great stride in preventing this crime.

Another practice in the islands which leads directly to much crime is the vice of gambling. The Filipino is a natural gambler, and I regret to say that municipal and provincial authorities, particularly the former, lend but little assistance in preventing it. It is believed that stringent and specific laws on this point should be passed by the Commission and taken entirely out of the hands of municipal authorities. It is an easy matter for a gambler to turn ladrone and procure a stake from his neighbor with which to continue his vicious practice.

At the close of the last fiscal year we had just succeeded in practically destroying the most formidable band of "patriotic" outlaws, under San Miguel, that the constabulary has had to cope with. San Miguel and 61 of his followers were killed and the band so scattered and demoralized that it was never reunited. Since that time his principal lieutenants have all been captured, except one, Apolonio Sampson, who is still in hiding, but with no following worthy of mention.

Julian Santos and Faustino Guillermo were captured, tried, and sentenced to death. The former cheated the gallows by dying in prison. The latter was hanged at Pasig on May 20, 1904. The fourth, Ciriaco Contreras, was recently captured by scouts in a barrio in Cavite Province, where he was living under an assumed name and following the trade of a fisherman for a living. He is now awaiting trial.

So many of San Miguel's followers have been picked up by constabulary, scouts, and secret service men, and tried, that a judge of the court of first instance was recently led to say that he was sure that he had sentenced more of San Miguel's followers than were originally claimed to belong to the band, the maximum being placed at 300.

The names of old offenders such as Montalon and Felizardo still adorn our posters of "Wanted," but, although they have managed to escape capture, their bands have been largely broken up and many captured during the past year. In Cavite Province alone more than 200 have been sent to Bilibid for terms ranging from two to forty years. At present Montalon is reported to be hiding in the mountains on the Cavite-Batangas border, and Felizardo is reported to be sick with tuberculosis and concealed by his friends somewhere in the vicinity of Las Piñas. While the precepts of the good book teach us differently, still I believe that I am justified in profoundly desiring to see him captured and hanged.

before the ravages of disease allow him to escape a fate which he so well merits. In September these two celebrities combined their forces and raided the town of Bay, where they robbed the Tabacalera company and Chinese merchants of that town. An investigation of the affair showed that the presidente sent the municipal police out to escort them into the town and to insure them against a surprise by the constabulary. It was also shown that this raid had been expected by the authorities for several days, but no intimation was given the senior inspector by either the governor of the province or presidente of the town, although the latter, when cross-examined, protested that he had notified the governor. The raid was made on the day following the withdrawal of a detachment of the engineer corps of the army from the town. The success of this raid induced these worthies to again believe that the glad hand would be extended to them in Laguna in April, when they mustered their forces, announcing that they were now, since the advent of Ricarte, genuine "revolutionarios." The result showed that the people of Laguna had experienced a change of heart. Constabulary of Cavite, Batangas, and Laguna rapidly assembled along the borders of the three provinces. Six companies of scouts were quickly sent to the scene, and while some organizations followed on their trail, others arranged to intercept them. The people of Laguna rendered much assistance, and the result was that after chasing them for two days they dissolved, with the loss of 23 killed, 5 captured, and 14 arms captured. These bands have not since attempted to concentrate, and, although we have captured many of their followers, no doubt we will hear from them again at some future time.

In September it was determined to place more troops in Cavite Province. The province was divided into 11 districts and four additional companies of scouts placed there, and instructions issued for patrolling under the following orders:

IMUS, CAVITE, September 9, 1903.

Field orders No. 17.]

The province of Cavite will be divided temporarily into districts for scouting, patrolling, and secret-service work, with stations and organizations as follows. (See accompanying map for district lines.)

District.	Organization.	Station.
1	Fifth Company, Scouts.....	Imus and San Nicolaas.
2	Twenty-first Company, Scouts.....	Do.
3	Thirteenth Company, Scouts (detachment 25 men).....	Melagasan.
4	Eighth Company, Scouts.....	Das Mariñas.
5	Nineteenth Company, Scouts.....	Biñan, San Pedro, and Muntinlupa.
6	Sixth Company, Scouts.....	Carmona.
7	Forty-fifth Company, Scouts.....	Silang.
8	Second Company, Scouts (detachment 50 men).....	Amaya.
9	Twenty-ninth Company, Scouts.....	Naic.
10	Seventh Company, Scouts (detachment 50 men).....	Cavite Viejo.
11	Constabulary.....	Quintana.
12	do.....	Indan.
13	do.....	Amadeo.
14	do.....	Maragondon.
15	do.....	Magallanes.
16	do.....	Rosario and San Francisco de Malabon.
17	do.....	Cavite.

The organizations and detachments at stations designated will take up the work indicated at once. Others as soon as rations are provided. Officers in charge of districts are expected to keep the section over which they have jurisdiction thoroughly policed. With this in view they are authorized to establish additional stations in barrios, composed of such number of men as can do effective work, which detachments will be frequently changed. They will call upon *tenientes* of barrios to provide shelter. At every station where there is a telephone one or two men will be detailed to attend to telephonic calls at all hours, day and night, and will be held to a strict accountability that this duty is properly performed.

A secret-service bureau has been established at Imus. All officers will transmit information to the senior inspector at Cavite promptly, and to Imus. They will always transmit information to the nearest station, which should act on information so learned and transmitted. Messengers will be used when necessary and paid for or *rales* given to the supply officer for payment. These instructions apply to both scout and constabulary officers. Any officer having knowledge of intelligent and reliable men who can be utilized for secret-service work will report their names to the senior inspector of the province.

Prisoners captured will be investigated, and if sufficient proof to warrant preliminary trial can be obtained a warrant will be sworn out against them and they will be proceeded

against according to law. If they can be utilized in obtaining information by confessions made, such information should be sent to the bureau here, or the prisoner himself sent here to be questioned by Lieutenant Crame, of the information division.

By persistent work and assurances to the people of our good intent toward law-abiding persons, it is believed that good results can be accomplished in the province. The district lines are only indicated to prescribe the territory generally to be covered. There cease to exist any lines when acting on information or in pursuit of ladrones.

Additional data will be placed on the map, such as roads, trails, sitios, single isolated houses—in fact, everything that can be utilized in making a complete map. Each commanding officer of a section will give this his attention. The maps will be taken in later, and all data obtained traced on the original tracing at constabulary headquarters. This map should receive as good care as possible. Some extra paper is furnished for making notes, which can be transferred to the map. Every scouting party should be able to furnish some data.

W. S. SCOTT,

Assistant Chief of Constabulary, Commanding First District.

Since that time, in spite of the extended assistance and sympathy shown these bands by the people of the province, partly through fear, but largely through a rebellious spirit, conditions have gradually improved. Still there is much to be desired and accomplished before Cavite can be classed as "good."

In May, under authority of the Commission, certain barrios in the province were concentrated and the people compelled to gather their goods and chattels and move to town, but allowed to go out during the day to work. Other barrios of the province, as well as certain ones of Batangas and Laguna, were required to move all their provisions into towns occupied by troops, but allowed to continue to live in the barrios, keeping only two or three days' supplies on hand, this to prevent them from feeding ladron bands, as had been their custom. While this has not had the desired effect it has caused these bands much inconvenience and hunger and compelled them to seek other pastures on which to graze. In consequence they are at present like "br'er rabbit"—lying low, not daring to try any movement. I believe that if we could now guarantee protection to the people at all places and times we would get more assistance than formerly. This is notably shown around Tanauan, in Batangas, where the people are for the first time giving us any aid or information.

In September, in addition to augmenting the troops in Cavite, a subdivision of the information bureau was established at Imus, under Lieutenant Crame, and the work accomplished by this bureau has been most excellent. I can not speak too highly of Lieutenant Crame's work. He is intelligent, conservative, and thorough. He allows no abuses and secures the friendship of the people.

Many ladrones captured, who were not charged with any serious offense, were liberated and used as spies to hunt for other ladrones, in addition to identifying suspects. Some of them have performed excellent work. The good work performed by this bureau induced those in authority to establish others at San Francisco de Malabon, Alfonso, and at Tanauan, Batangas. The combing thus given the vicinity of Imus has left that section comparatively free from ladrones.

In addition to service as spies, it has been customary at times to round up the male inhabitants of certain barrios and have these ex-ladrones look over the people and identify any of their former companions. I supervised one of these dragnet performances in which a number of barrios adjacent to San Francisco de Malabon were corraled. We gathered in about 1,500 hombres. They were required to pass in review as they returned to their barrios. As they passed the reviewing stand our judge eyed them closely, and occasionally drew a man out of ranks. Fourteen were thus identified and 11 of them convicted before the courts. In order that no favoritism be shown, every male inhabitant was brought in. The ex-governor of the province, the justice of the peace, and the presidente walked by with hat in hand as humbly as the "rice paddy tao."

During the year another star of first magnitude has made his appearance in Batangas Province. Oruga, who has been a ladron for a long time, got some guns together, accumulated a following of as fine a collection of cutthroats as the islands can boast of, and announced that he was a "colonel." The principal occupation of this choice collection has been stealing and ransoming animals in northern Batangas, where Oruga has given us considerable trouble. He has varied his proceedings from time to time by kidnapping a resident of some barrio and ransoming him similar to the "other cattle." We have succeeded in killing a number of his band and captured a few guns, but ladrones, like nits, continue to hatch as long as a gun can be provided.

The Twenty-fifth Company of scouts had a detachment of 7 men under a sergeant looking for Oruga and his band on April 6. They found him by allowing themselves to be ambushed. They succeeded in killing 7 of the band, but had 2 of their number wounded and 2 captured. The captured escaped after a few days and the wounded recovered.

Two days later Lieutenant Berners, of the scouts, intercepted part of this band and succeeded in wounding and capturing 1 and killing 1. About the most notable feat of this band was its attack on a party of surveyors, who were running the lines of the friar lands west of Batangas on March 20. This party, consisting of 2 Americans, a Chinese cook, and a muchacho, with 4 constabulary, were awakened at daylight by the band firing into camp. One surveyor was wounded and the sentinel killed. After looting the camp and relieving the party of provisions and pocket money, Oruga apologized by saying that he just wanted an explanation as to why they were surveying the land. Thus the ingratitude of some of our "little brown brothers" is prominently exemplified. While the government exerts itself to rid the country of what has been claimed by the Filipino to be the most unworthy act of their oppressors, by buying up the friar lands to dispose of them to the occupants, armed bandits smite the hand extended in succor.

For this gallant deed Oruga appointed himself a brigadier-general. There is one thing to be admired about him, and that is that occasionally he can be induced to put up a fight, when he feels that honors are in his favor, which is more than can be said generally of the leaders of these bands.

There are other small bands in Laguna, Batangas, and Cavite, headed by robbers of less notoriety than those mentioned. It has been our good fortune, from time to time, to capture or kill some of their members, but their complete extermination seems to be the only permanent remedy for getting rid of them.

There is a small band in Bataan, but they have almost been exterminated. The leader was formerly a native constabulary officer, but was caught stealing horses and placed in jail. He escaped and organized this band. He was later captured by a sergeant of constabulary and was killed while attempting to escape.

In Zambales there was a small band, but recent reports state that it is exterminated, except the leader, who is hiding in the mountains.

In Bulacan there is no organized band, but carabao stealing in that province is reduced to a science. An attempt was made to break it up, but our information division failed to receive the support of the officials and abandoned it temporarily. The governor of the province has recently requested assistance, and our efforts are again being exerted in that direction.

There are no organized bands in Tarlac or Pangasinan, but more or less carabao stealing is in vogue along the borders of those and Nueva Ecija provinces.

There is a band of religious fanatics in existence in northern Nueva Ecija, under the command of Felipe Salvador, known as "Santa Iglesia." They do not remain together continuously, but combine, commit depredations, and immediately disband. This outfit has given no trouble since September 16, 1903, when about 100 of these men, with about 40 guns, attacked the constabulary barracks at San Jose. The station consisted of an American officer and 44 men. The commanding officer, Lieutenant Wakeley, and 6 privates were wounded, 1 sergeant and 4 privates killed. Three of the wounded afterwards died. The outlaws lost 14 killed. The constabulary lost 3 Springfield rifles and captured 1 Remington and 2 Springfield rifles, besides bolos. This was the most vicious and persistent attack that outlaws have at any time in the district made on constabulary. It was in the middle of the night, and it is claimed by Captain Wakeley that there was one traitor among the constabulary. I embody herewith the report of the senior inspector on this affair:

CONSTABULARY OF NUEVA ECIIJA,

San Jose, September 20, 1903.

Sir: The following is the result of my investigation of the attack on San Jose, on the morning of September 16, 1903:

It appears from the statement of Lieutenant Wakeley that about 12.30 a. m., 16th instant, the sentinel posted on north side of his barracks, outside the trenches, was fired upon by a large crowd of persons. He immediately ran to the cuartel and gave the alarm. The guard and detachment at once "fell in" and opened fire on the attacking party, who were then close to the trenches. The first volley from the constabulary drove their enemy back, but they came on again and were again driven back. Once more they renewed the effort, and the leader, Captain Beyron, killed, jumped on the breastwork, saying to the constabulary, "We are here by appointment; keep your promises; kill your commanding officer." At this the constabulary hesitated and stopped firing for about thirty seconds, and only for Lieutenant Wakeley shooting this man the result would have been deplorable, as he might have won over the constabulary. On the fall of this leader the fighting was renewed vigorously on both sides. A party of bolomen, in the meantime, succeeded in getting inside the intrenchment from the side, getting into the guardhouse and securing two or three rifles, which they immediately turned on the constabulary. By this time 5 of the latter had been killed and 3 wounded, nearly all being shot from the right rear. The fighting now had lasted fully two hours, when Lieutenant Wakeley ordered a flank assault on the attackers, which succeeded well, and they were driven off, leaving 11 dead and 4 wounded,

3 of whom since died, making a total loss to the enemy of 18. Lieutenant Wakeley was slightly wounded on right hip, a Springfield bullet striking his belt and remaining there, exploding 13 Krag cartridges and knocking him senseless for a moment. Sergeant Agsilu, First-class Privates Magpale and Rodio, and second-class Privates Cariño, Lucas Menceros, Pascual, and Ubaña were killed and Private Sebastian and 2 others wounded.

Lieutenant Wakeley is deserving of the greatest praise for his signal courage and coolness in this desperate contest, and I earnestly recommend him for promotion at first opportunity. Sergeant Agsilu and his 7 companions were as brave men as ever fought under a flag.

The attack was marked by some skill and fanatical determination, met and only overcome by dogged pertinacity.

Lieutenant Wakeley desires to especially recommend First-class Private Maximo Dumlaog, who held an outpost against great odds during the fight. Through the good judgment and cool courage of this man the enemy were unable to flank the post from the rear, their being one column of the enemy sent to do so; First-class Private de la Cruz, who volunteered to take 2 men and flank the enemy, which he successfully accomplished; Second-class Private Julio de los Reyes, also member of flanking party; Second-class Private Sebastian, after being twice shot, second time seriously, not fatally; Second-class Private Clemente Lazaro and Second-class Private Juan Comilan. Lieutenant Wakeley recommends that if consistent these men be given medals for valor in the most critical point in the fight, when the enemy had the advantage and offered rewards if the constabulary would kill their leader and lay down their arms. He recommends that First-class Privates Aghual, Espanto, and Botid be mentioned in orders.

The constabulary lost 3 Springfield rifles and captured 2 Springfields, 1 Remington, besides bolos and clubs.

There was undoubtedly one traitor, Second-class Private Remigio Ferrer (and possibly First-class Private Joaquin Opiñano). The first was absent without leave until hour of attack, but was seen by Lieutenant Wakeley in rear and right of him and his men with a rifle. He confesses to having been there and of firing at his comrades. Taxed with the crime he says he was out of his head. He is now in carcel at San Isidro and will be charged with treason. Private Opiñano was in the guardhouse at time of attack, but did not take his place in the ranks, only leaving the guardhouse when he saw two of the enemy entering. Without the least resistance he gave them his rifle, saying he was afraid of them. Lieutenant Wakeley ordered him afterwards to bring a box of ammunition from the office. He refused, saying he could not on account of his sore wrist, and would have persisted in refusing only was afraid the lieutenant would use force. He is now in carcel and will be tried for treason, as it is probable that he and Ferrer were agreed to give up their rifles to the enemy.

After the fight the attackers dispersed in twos and threes, but reunited afterwards. One column of 60, commanded by Salvador, went toward Biacnabato, according to the story of a prisoner who was with him at San Jose and for one week previous and who heard Salvador tell the others he was going there and there would receive arms and supplies. One column of about 40, which I trailed for two days, is probably gone toward the Penaranda Mountains, and it is probable that a small column of Tarlac people went toward Cuyapo and Anao, as I received notice that Anao was attacked by Santa Iglesias on the 20th instant.

There were persons in the attack from Pampanga, Pangasinan, Bulacan, Tarlac, and Nueva Ecija, the latter being in the majority. All the population are in sympathy and the majority in some manner connected with this movement. The idea seems to be to get as many arms as possible, with a future view toward a general uprising.

The lawmakers ought to make some law making it a felony to a proven member of this organization.

They will be hounded to the end by the constabulary of this province.

Am very sorry that I could not forward this report sooner. I prepared it on the 20th at San Jose and left there the 21st, intending to mail it at San Isidro. Midway I struck a fresh trail, which I followed 21st and 22d, arriving at Talavera on 23d instant, late in the evening. The next mail for Manila left San Isidro on the 24th, so it could not go by that mail. I therefore kept it until to-day.

Very respectfully,

R. B. KAVANAGH,

Captain and Senior Inspector, Philippines Constabulary.

CHIEF FIRST DIVISION, PHILIPPINES CONSTABULARY,

Manila.

In October, 1903, Lieutenant Velasquez was sent from Bayombong, Nueva Viscaya, to complete the census of the mountain districts, under the supervision of the governor of that province. On the 6th of that month it was reported that he was attacked by a large number of Calingas and other Igorrote tribes. The following is the senior inspector's (Captain Williams) report on this affair:

[Telegram.]

BAYOMBONG, N. V., October 22-23, 1903.

CONFIRST, *Manila*.

Lieutenant Velasquez and party of 28 men reported here to-day. Most of party suffering with chills and fever and show marks of hardship and service. Lieutenant Velasquez makes the following report: At 9.30 a. m., October 6, in the district of Banafa, Isabela, while holding friendly conference with the following-named jefes of the Gaddan tribes, High Chief Tunit, of Caransao; Chiefs Dungaue, Jalangoy, Balanguia, and Sabio, of Banafa; Chiefs Gumbi and Nanbaung, of Antang, my detachment, consisting of myself and 30 men, were attacked by 500 to 600 Calingas and Ifugao Igorrotes, latter Botoc. My two sentinels were surprised by rush of 80 savages from dense underbrush. Second-class privates Buenaventura Alindayu and Mariano Gorales were sentinels and fatally wounded, Alindayu with spear and Gorales with pinaparing, in the charge before their comrades could give assistance. At first fire from sentinels the chiefs in the conference rose to their feet, pinaparing in hand. He (Velasquez) killed 6 of the 7 chiefs with his revolver, and the seventh with a pinaparing, while the soldiers were all engaged in a hand-to-hand fight, which lasted thirteen minutes, with the following result: Constabulary lost 2 men fatally wounded, 2 slightly wounded, and 2 Springfield carbines, and Lieutenant Velasquez lost Winchester carbine, his personal property. Calingas lost 53 killed, 30 or more wounded, 2 Remington rifles, 2 muzzle-loading shotguns, 3 flintlock guns, 5 Springfield carbines, cartridges, 1 pound gunpowder (made from pulverized match-heads), and 20 pounds rifle balls, 100, 13 pinaparings or head-axes, 3 bolos, 5 steel spears, 6 rodels of shields. Revolvers only were used by the constabulary in first attack—too close to use carbines. Calingas retreated to wooded mountains nearby and kept up hot fire with Krag, Mauser, Remingtons, flintlocks, and muzzle-loading guns of various kinds for about twenty-seven minutes. Their loss after taking to the woods is not known. After ceasing fire, burying the dead, and destroying all captured property, extra clothing, and rations, the constabulary began a retreat toward Mererao, but being completely surrounded were compelled to drop and shoot their way out. Five hundred to 600 Calingas and 30 constabulary were engaged October 7; had running fight from 6.30 to 8 a. m.; Calingas retreated, losing 30 killed and wounded. Three hundred Calingas and 28 constabulary were engaged October 8; had running fight from 6.30 to 8.30 a. m.; Calingas retreated, losing 9 killed and 7 wounded. Two hundred Calingas and 28 constabulary were engaged 7th and 8th; constabulary had no casualties, but were without food from 6th to 10th instant. All captured arms were broken, and with captured ammunition, all rations, and extra clothing were burned that nothing might fall into hands of the enemy. Lieutenant Velasquez recommends the following-named enlisted men for meritorious service, to take precedence as listed: Second-class Private Mariano Camonoyon, First-class Private Nicola Bayanton, Second-class Private Manuel Callueng, First Sergeant Boinardo Tumalium, Second-class Private Bernardo Dumlod, Corporal Jacinto Cadauan, Second-class Private Antonio Cruz, First-class Privates Dominto Guavad and Juan Birca, Second-class Private Alejandro Padasdao. I recommend for the good of the service that Lieut. Joaquin Velasquez and the 10 above-named men be awarded medals of valor as reward for bravery, their heroic courage and remarkable endurance. All members of the detachment deserve honorable mention.

WILLIAMS, *Consenior*.

Later investigation and the testimony of a large number of enlisted men present showed conclusively that a portion of Lieutenant Velasquez's report was false, and that this disturbance was brought on by his attempting to take certain guns away from these Igorrotes when he was sent there on a peaceful mission to take the census. In consequence, Lieutenant Velasquez was dismissed by the chief of constabulary.

In Rizal Province there is a small band under Macario Sakay, who poses as the presidente of the Philippine republic. This man was formerly a barber in Manila. He has about 6 guns and a following of a few additional men. Several times during the year this band has been located and a number of its members killed. Lieutenant Pitney, at Tanay, in March, struck this band about 8 miles north of that town and killed 19 of its members. Later, in May, 5 constabulary of Rizal Province, through a ruse, induced a number of this band to enter the town of Bosoboso, where 4 were killed. Recently they attempted to go into Bulacan, and were intercepted near Norzagaray by a detachment of constabulary under a sergeant of that province, and 4 were killed and 7 captured. In each instance some guns were captured. This band has committed no depredations beyond compelling the people to supply food. Sakay claims that he is not a ladrone but a patriot. Details of these affairs have been submitted in quarterly reports during the year.

Recently, in Pangasinan, the senior inspector unearthed the formation of a new Katipunan society, under the leadership of Pedro C. Gasig, who styled himself a captain-general. Quite a number of his followers were captured with what purported to be commissions in their pockets. These men are now in jail awaiting the action of the courts.

On the 23d of December, 1903, Artemio Ricarte, one of the irreconcilables deported to Guam and later brought to Manila with other prisoners from that island, refused to take the oath of allegiance and was not allowed to land. He has since spent his time in Hongkong, where he organized what is known as a Filipino junta, for the purpose of agitating a revolution in the islands. Prior to his returning to Manila clandestinely he was in correspondence with certain persons in and about Manila and had organized what he called a "revolutionary army," which consisted principally of brigadier-generals and colonels, the recruiting of privates not having been commenced. Immediately upon his landing it was discovered that he was in the islands, but he was at large until May, when he was captured in Mariveles, Bataan Province, by Lieutenant Heartt, of the constabulary, assisted by the presidente and clerk of the court. Immediately upon landing he called together his leaders and gave instructions for the organization of the revolutionary army, styling himself the "general in chief." He made a tour of Bulacan, Nueva Ecija, and Pampanga provinces, touching at certain towns. Almost immediately after his landing secret-service men of the information division commenced to gather in his "generals," and much credit is due the information bureau for its excellent work in this respect. Within thirty days after his landing practically all of his followers were in jail, and all have been sentenced for a term of years in Bilibid. A man by the name of Tolentino, who had been sentenced to imprisonment for writing and producing seditious plays in Manila, joined with Ricarte and styled himself the "dictator of the Philippines." This man was under a bond of \$3,500 at the time, which he jumped, and went with Ricarte to the bosque. Shortly after Ricarte's capture, Tolentino was also captured. Both of these worthies are now serving sentences in Bilibid prison. Additional charges will be preferred against Ricarte for being the instigator of certain mutinous conduct on the part of constabulary soldiers in Ilocos Sur in January of the present year. It appears that a detachment of soldiers from Ilocos Sur were serving in Pampanga Province; that Ricarte corresponded with Corporal Ayala and Private Calvo, inducing them to take steps to cause a mutiny in the garrison at Vigan upon their return to their province. These men foolishly attempted the same, having induced some twenty-odd constabulary, together with a lot of ignorant taos from the barrios around Vigan, Ilocos Sur, to join them. This party of mutineers, after robbing the commissary and helping themselves to guns, ammunition, clothing, etc., started out through the province, but were intercepted by scouts, constabulary, and American cavalry within the next few days. The entire outfit have been sentenced to long terms in Bilibid. The two soldiers above mentioned, one other soldier, and a civilian implicated in the matter were sentenced to death. I was acting chief of constabulary at the time and took personal command of the situation in Ilocos Sur until quiet was restored.

The details of this affair are set forth in a special report on file in the office of the chief of constabulary.

While the advent of Ricarte into the islands caused no serious disturbances, and it was clearly shown that the people of the islands did not sympathize with him and are not prepared for a revolution and do not desire one, still his capture had the effect of quieting a certain restlessness among the people in the provinces adjacent to Manila.

The authorized strength of the constabulary of this district during the past year has been 2,400. In addition, 18 companies of Philippine Scouts, assigned with the civil government, have been on duty in the district.

Under recent orders from the office of the chief of constabulary the authorized constabulary strength was reduced to 2,200, and a new scale of pay was ordered, making the pay of enlisted men more nearly uniform in the different provinces. Under present conditions the reduction was justified, and should conditions continue to improve it is believed that in time a further reduction can be effected. When we can substitute a smaller number of well-trained and disciplined men for numbers we will have made a great step in advance.

The term of enlistment of a large part of the constabulary has expired during the past few months, or will expire in the near future. In some provinces the majority are reenlisting, but in others less than 50 per cent.

It is impossible to report yet what the effect of reclassifying the pay will have. In some provinces the pay was slightly reduced. It is a well-known fact that a Filipino is always asking to have his pay raised, but generally quits his job when his pay is reduced, remains idle until he gets hungry, and is then happy to begin again at the foot of the ladder. Possibly the same effect may obtain with the constabulary in those provinces where the pay has been reduced. The constabulary soldier has learned to compare his pay with that of the scout, and the scout is grumbling because his pay is less than that of the American soldier.

The fact is, the scale of pay of the constabulary is believed to be about right, and even that is far more than they ever dreamed of receiving in the days of the Spaniards.

CLOTHING.

There has been some discussion as to whether or not the clothing allowance of 50 pesos is sufficient. I recently called for the views of the senior inspectors on this subject. A few thought it ample, but most of them thought it should be increased to 65 pesos, stating that where there was much field service it was not sufficient at present. Of course it is desired to have men at all times present a neat and soldierly appearance, and not be compelled when they go to the field to don a uniform in which they can take no pride. Smart clothes certainly stiffen a man's back and make him hold his head a few inches higher, and generally make him a little better man. This is particularly so of the Filipino. When we can reach the point where we can reduce in numbers, it is recommended that the clothing allowance be correspondingly increased.

SUBSISTENCE.

Beginning with the present calendar year the system of rationing the constabulary was changed. Prior to that time each soldier paid for his own food, and when in the field it was furnished him without charge. The men ate at tiendas or with their families. The first step as an improvement was to establish messes at nearly all stations in the district, the cost of same being deducted from the men's pay. It was found that this method of messing cost the soldier a little less, on an average, than 7 pesos.

Under this system the men improved in strength and health. Following this, the Commission appropriated 21 centavos per day for the purchase of a soldier's ration. This method is very flexible and has proven entirely satisfactory. In the provinces of this district it has cost less than this amount to feed the men. The result is a saving which constitutes a mess fund. In this district senior inspectors have been required to keep these savings as savings for each separate station, and not lump it as a provincial mess fund, for the reason that at some stations quite respectable savings are made, while at others nothing is saved. It was deemed but just to the men that such savings should accrue to the benefit of the men who made them.

Experience has shown that some officers have handled their messes splendidly, while others have performed this duty but indifferently. There has been marked improvement in this respect, and it is believed that we need have no further anxiety where stations are commanded by American officers. The native officer, with but few exceptions, has proven himself an indifferent caterer and an extremely poor manager and accountant in running these messes.

The system operates as follows: The supply officer of each province requisitions monthly for funds for subsistence of the men of his province. The senior inspector draws on him for funds for the entire province at the rate of 21 centavos per day for the month. The station commanders make purchases in open market or from the branch civil supply store, giving receipts for same, retaining a stub showing the transaction. These receipts are cashed by the senior inspector or, when more convenient, the station commander is given money by the senior inspector, on memorandum receipt, and he cashes his own receipts and turns them in to the senior inspector. Station commanders must keep a daily record of strength of station and submit a return to the senior inspector at end of month, showing proper accounting. These returns are consolidated by the senior inspector, who forwards them for audit to the district chief. While on detached service or in the field, where it is impracticable to mess the men, they may be given cash at the rate of 21 centavos per day.

The senior inspectors are authorized to expend the savings for the benefit of the men for such purposes as comforts about their mess, barracks, or dining room, or for extra articles of clothing for men who are in debt to the Government. They may also return the savings to the men if they so desire. Any other expenditures than these, of savings, must receive the sanction of the district chief. In all cases of expenditure the wishes of the men are ascertained, as it is regarded as their money, except as to its care and supervision.

During the five months from January 1 to May 31 the savings in provisions have ranged from a few pesos to upward of a thousand. In those provinces where there was a great deal of field service but little savings were made, and in one province, Cavite, where men were continually in the field and eating at numerous stations, some confusion of accounts resulted, but this confusion was due to the fact that several stations were commanded by native officers who were not competent to keep their accounts properly.

With proper care on the part of officers and attention to duty the system should work with entire satisfaction.

It would be a good thing if this system of rationing could be extended to scout companies. At present fully half the efficiency of these organizations is lost by detachments being compelled to return to their stations after three or four days to provide themselves with rations.

On the 23d of December, 1903, Artemio Ricarte, one of the irreconcilables deported to Guam and later brought to Manila with other prisoners from that island, refused to take the oath of allegiance and was not allowed to land. He has since spent his time in Hongkong, where he organized what is known as a Filipino junta, for the purpose of agitating a revolution in the islands. Prior to his returning to Manila clandestinely he was in correspondence with certain persons in and about Manila and had organized what he called a "revolutionary army," which consisted principally of brigadier-generals and colonels, the recruiting of privates not having been commenced. In all cases of expenditure the wishes of the men are ascertained, as it is regarded as their money, except as to its care and supervision.

During the five months from January 1 to May 31 the savings in provisions have ranged from a few pesos to upward of a thousand. In those provinces where there was a great deal of field service but little savings were made, and in one province, Cavite, where men were continually in the field and eating at numerous stations, some confusion of accounts resulted, but this confusion was due to the fact that several stations were commanded by native officers who were not competent to keep their accounts properly.

With proper care on the part of officers and attention to duty the system should work with entire satisfaction.

It would be a good thing if this system of rationing could be extended to scout companies. At present fully half the efficiency of these organizations is lost by detachments being compelled to return to their stations after three or four days to provide themselves with rations.

MEDICAL CORPS.

During the year a medical corps for the constabulary was established on a small scale. In the first district it now consists of 1 surgeon, 2 medical inspectors, and 17 hospital corps men. In the first district a hospital has been established at Tarlac, and medical inspectors are stationed at Tarlac and Manila, with hospital corps men at stations, as shown in appended list of stations. The superintendent of the medical division is also surgeon of the first district. He will submit his report direct to the chief of constabulary, therefore no details will be mentioned in this report.

The medical division in the district has done a great deal of good, and its extension is a matter to be determined by the needs of the service and money that is appropriated. A supply of medicines is kept at most stations in the district, and the simple complaints are attended to by hospital corps men, the more serious ones by medical officers being sent to stations, and in cases where hospital treatment is necessary the patients are sent to Tarlac, the civil hospital in Manila, or the nearest army station. At several of the posts simple wards, with a few conveniences, are arranged. There has been a great demand for a hospital in Nueva Viscaya, it being an extremely isolated place with no doctor in the province. After some discussion as to the feasibility of the board of health establishing one, it was finally decided by the civil governor that the constabulary should do so. In a very short time one will be in operation there, and it will prove a great source of comfort and relief to the constabulary and civil government employes, both native and American, in that isolated district.

It is believed that by judicious combination the work of the board of health and the medical work of the constabulary can be combined in the provinces with benefit and economy to the government.

TELEGRAPH DIVISION.

The work of this division has been largely extended in the district during the year. Several lines have been taken over from the army, much construction and repair accomplished, and lines extended. A large majority of stations in the district are now connected by wire, and it is possible for district headquarters to communicate with nearly all stations in Cavite, Batangas, Rizal, Laguna, and Bulacan by telephone, and with most others by telegraph. This has facilitated the work of apprehending outlaws very materially, and has enabled us to accomplish much work that otherwise would have been next to impossible.

There are serving in the district 4 telegraph inspectors, 16 American operators, 19 native operators, 9 American linemen, and 9 native linemen at stations as shown in appendix.

Native telegraph operators and linemen are doing fairly good work, and in time will be able to handle all but the more important stations.

TRANSPORTATION.

Transportation facilities have been much improved during the year. In a number of provinces mules and light wagons or rowboats have been supplied, thus facilitating delivery of supplies with economy to the government. It is to be hoped that the next appropriation will enable us to further provide similar transportation.

BARRACKS AND QUARTERS.

Constabulary occupy public buildings at but few places in the district; therefore the rent of houses for barracks and quarters for officers means quite a draft on the appropriation. Private houses are generally not adapted to quarters for troops, and it is believed that the time has arrived when steps should be taken to spend a few thousand dollars annually in the construction of suitable quarters at such points as there will unquestionably be a station maintained for a long period.

The constabulary has developed into an organization of permanency and importance in the islands far beyond what was expected at the time of its organization, and it becomes necessary to provide suitable quarters for sheltering it with comfort and economy.

SCHOOLS.

General Orders, No. 82, headquarters Philippines Constabulary, series 1903, outlined a course of instruction for enlisted men. This order was amended by General Orders, No. 75, headquarters Philippines Constabulary, series 1904, which is more comprehensive. Considerable progress has been made at many stations, but field work in the first district has retarded progress very materially. As conditions improve, facilities and opportunities for teaching will become greater, and it is believed that generally much good will be accomplished. So far instruction has been confined to teaching English, reading and writing, and map reading, some effort at route sketching, drill, orders and acts affecting the constabulary, how to serve warrants, and how to present cases to justices of the peace.

Some progress has been made.

MUNICIPAL POLICE.

There has been some improvement in the municipal police of a few of the provinces. They have been placed under the orders of the senior inspector, a system of regulations adopted and in some cases noncommissioned officers detailed to drill them. In other provinces they continue to be useless and worthless, largely due to the fact that they are principally used as muchachos for the presidente and other municipal officials, being improperly clad and poorly paid. After a fair trial, if there be not a marked improvement, a recommendation will be made to take up the arms in their hands and limit the towns to such number as may be needed about the municipal building and to be used as messengers. Arms are in their hands as follows: Rifles, 869; shotguns, 996, and revolvers, 646. These are bonded and are comparatively safe, but we are continually in fear of their being robbed of these arms by outlaw bands. In some places they have been extremely careless with the ammunition furnished them, and there is reason to believe that in certain localities ladrones have been supplied with the ammunition which is missing.

Where aid is asked of the insular government it is believed that it would generally be better to increase the constabulary by that number and take care of the town in that way.

In the province of Rizal there is not an armed policeman and it is about the quietest province in the islands. At certain points shotguns should be kept in the hands of police to prevent carabao stealing.

LAUNCH.

The *Suerte*, which is at the disposal of the district chief, will, I am informed by the chief of the bureau of coast guard and transportation, fall to pieces some day and leave us without water transportation. This should be forestalled by the supply of a good, roomy launch with shallow draft.

This boat does an immense amount of work by supplying stations on the lake and bay, towing all cascoes with supplies for the quartermaster to vessels in the bay, and by transferring troops from place to place. The services of such a launch are indispensable.

MIXTURE OF TRIBES IN PROVINCES.

It is believed that beneficial results will obtain by authorizing the enlistment of one-half the strength of constabulary of provinces in certain places from natives of a tribe different from the inhabitants of the particular province. This may have the effect of preventing local and tribal contaminations. It is questionable if disturbances such as the one in Ilocos Sur would occur if this mixture of tribes were authorized. Such disturbances, if repeated, would give the constabulary a "black eye" in the minds of many people here and in the United States, whether it was deserved or not.

RELIGIOUS QUESTION.

Leaving out the question of religious fanatics and their organizations, there is still considerable agitation in certain parts of the islands over Aglipay and his independent church. He and his followers are believed by many people to be nothing more or less than a political organization. Whatever this organization may develop into I am by no means prepared to believe that at present the organization has politics or revolution as its object. It is true that this church has gathered into its fold the restless and disturbing element. It is but natural that such people would join such an organization. While there is religious dissension, one party or the other is bound to regale us with the misdeeds of its religious enemies, and neither can go far wrong without our knowing it.

A few disturbances of a minor nature have occurred, necessitating the constabulary or scouts taking a hand to keep the peace, but these are rare and scarcely worthy of mention.

TORTURE OF VICTIMS.

There have been a few cases of inhuman treatment and torture of victims by outlaws. The presidente of Bosoboso, Rizal, and a resident of a barrio in Cavite were captured and the tendons back of the heels cut in such way as to cripple the men for life. One man in Cavite had his lips cut off and a woman in Bulacan had her ears similarly treated.

Two secret-service men were hanged in Cavite and 2 murdered in Bulacan. The culprits in several of these cases have been captured.

Such acts as these intimidate the people in the vicinity, and unless we can give them protection they will not give us information.

TARGET PRACTICE.

Aiming and sighting drill has constituted part of the drill in all provinces, and in two or three there has been some target practice. The results are not highly satisfactory, but with the limited expenditure of ammunition no great results could be expected. The practice held included 500 yards.

STUDY OF NATIVE DIALECTS.

It is believed that an incentive should be held out to those constabulary officers who qualify themselves in the native dialects, by giving them a prize in money or an increase of monthly pay. The value of an officer is almost doubled who can converse freely with natives in the community where he is operating.

PERSONNEL OF CONSTABULARY OFFICERS AND PAY.

The variety of duties which a constabulary officer is required to perform is of such a varied nature that he should be a man of intelligence, high spirit, honest, conservative, and firm, but not brutal or cruel. Far more varied and delicate duties are required of him than of an army officer serving with troops. "You can't make a silk purse from a sow's ear;" we must, therefore, get rid of unsuitable material and substitute men of proper intellectual and moral fiber to properly perform these duties. Such men are not cheap, and if we get them and expect to keep them we must pay them commensurate with the work required and equal to men of corresponding type and equally important duties in other branches of the government and in commercial life.

We are continually losing men by transfer to other bureaus, where they get more pay, and by resignation to accept more lucrative positions.

Officers and men of both constabulary and scouts in the district have generally performed their duties with loyalty and discretion. They have had much hard work, and have performed it cheerfully and well. This is shown by results which are tabulated in the appendices to this report. The details have been reported upon in my quarterly reports.

Conditions in the district have improved during the year materially, and while I feel that there is much left to be accomplished I realize that there is much improvement.

With less field work in future in pursuit of organized bands of outlaws we can turn our attention more to minor depredations and break up petty robberies, gambling, and the stealing of animals. One of the great drawbacks that we will encounter in this will be the dishonesty of municipal officials. If we could get clean administration the rest would be easy.

The paper work in the district office has been arduous and the limited forces in the adjutant's and district supply officers' offices have had all they possibly could attend to. I am indebted to Lieutenants Clausen, the adjutant, and Leonard, the supply officer, for efficient and loyal services in their respective departments.

I regret to report that ill health has caused my stenographer, Mr. D. G. Dwyre, to tender his resignation for the purpose of returning to the United States. His services have been efficiently and faithfully performed.

During the entire year I have commanded the first district and, in addition, from December 23, 1903, to May 7, 1904, was acting as chief of constabulary.

There has been some talk to the effect that scouts and constabulary are at enmity with each other. Where such reports originated I am unable to say, but such has not been my observation, nor have I received more than one complaint on the subject. This was more of a personal nature, when one province appeared to be too small to hold a senior inspector and commanding officer of a company of scouts, both Irishmen. A warning to them that if their differences were not amicably settled at once they would both be assigned to other stations had the desired effect.

As a fact, most senior inspectors have emphasized the fact that they have received every aid from scout officers.

It is but natural that the two organizations should work in harmony. Enlisted men of both organizations are drawn from the same source, and the officers from both are largely from the army, where many were warm personal friends.

Whether the two organizations should be combined into one insular army is a question open to argument. There are good reasons for and against this amalgamation. The views of the writer on this subject have been submitted to the chief of constabulary. The present arrangement is accomplishing good results, as shown by tabulated appendices to this report. It can well be foreseen that we will, in addition to the Regular Army, always have to maintain in these islands an organization composed of natives, for a peculiar class of work for which it is neither advisable nor convenient to use the Regular Army. This organization must also be officered by men who have learned by experience the peculiar and varied work which will devolve upon them.

I am fully prepared to show that the efficiency of scout organizations in the first district has been materially improved by the services which they have been called upon to perform since February, 1903, with the civil government, in assisting in maintaining the peace, in conjunction with the constabulary. Officers have become proficient in the multitudinous duties which have devolved upon them through the best of schools, experience.

The men have learned to be self-reliant and capable of caring for themselves in the field. The noncommissioned officers have learned the duties of scouting, making arrests, and handling prisoners while keeping within the confines of the civil laws.

Both officers and men are in good physical condition and hardened by field service. The benefits of this were brought especially to my notice last winter, while operating in the field in Ilocos Sur, where scout organizations were thrown together which had, and had not, been performing this duty.

I wish also to call attention to the fact that two officers with a company, while performing this duty, are insufficient. The companies must necessarily serve much of the time in detachments away from the headquarters of the company. Such detachments of native troops should be commanded by an officer.

These companies should, by all means, have three officers.

Again, many of the scout officers have been serving in the Philippines from four to five years, and are deserving of a leave.

If these companies were organized into battalions and those of same battalion assigned to contiguous sections of country, and majors appointed to take command and supervision of same, it is believed that the effect would be most beneficial.

Very respectfully,

W. S. SCOTT,

*Colonel and First Assistant Chief, Philippine Constabulary,
Commanding First District.*

THE ADJUTANT-GENERAL PHILIPPINES CONSTABULARY,
Manila, P. I.

REPORT OF THE SECOND DISTRICT, PHILIPPINES CONSTABULARY.

HEADQUARTERS SECOND DISTRICT, PHILIPPINES CONSTABULARY,

Lucena, P. I., June 25, 1904.

SIR: In compliance with your telegraphic instructions of May 19, 1904, I have the honor to submit the following annual report on the operations, occurrences, and conditions in this district for the fiscal year ending June 30, 1904:

The second district, Philippines Constabulary, at present comprises the provinces of—

	Estimated population.
Albay.....	250,000
Ambos Camarines.....	240,000
Masbate.....	45,000
Mindoro.....	50,000
Romblon.....	60,000
Sorsogon.....	140,000
Tayabas.....	215,000
Total.....	1,000,000

Throughout the year the undersigned has been in actual command of the district. Capt. Edward R. Higgins served as district adjutant from June 1, 1903, to October 17, 1903; First Lieut. W. B. Wright, from October 18, 1903, to January 17, 1904, and First Lieut. Charles D. Boone, from January 18, 1904, to the present date. Capt. Justice M. Wheate, surgeon, throughout the year has served as district surgeon, and Second Lieut. Guy C. Foote as district supply officer from September 7, 1903, to the present date. Charles S. Darling has served since March 17, 1904, as stenographer, and James B. McKowen as clerk since December 6, 1903. All the officers and employees on duty at district headquarters have shown themselves to be conscientious, capable, and most zealous in the performance of their duties.

At the time of rendering my annual report of June 30, 1903, the entire district, barring the two island provinces of Romblon and Masbate, was in a very badly disturbed condition. In Mindoro the band of Gasie was still in the bosques, with no immediate prospects of its capture; on the main island of Luzon, Tayabas Province continued to have a few scattered groups of ladrones; Avila was hovering along the northern Camarines border; and Albay had four distinct and separately organized bands within its territory, these, in the order of their importance, being those of Simeón Olá, Lázaro Toledo, Agustín Saria, and Titio Sacula. There were in addition a few small bands along the northern portion of Sorsogon Province, but this portion was also badly overrun by the Albay ladrones.

The following is a synopsis of the more important events by provinces:

ALBAY.

On June 30, 1903, nearly all the towns of this province were reconcentrated, and both the constabulary and scouts were constantly engaged in an active campaign against the four large ladrone bands within her borders. These numbered over 1,000 men, mostly armed with bolos and with about 150 firearms, according to our information. Ladronism had so long been rampant in the province of Albay and had assumed such stupendous proportions, especially after the ladrones had captured the 47 Springfield carbines in the hands of the volunteers and constabulary of Oas, that the leaders had become most arrogant, and, on account of their successes, had won over the sympathy and secured the cooperation of nearly the entire province.

In March, 1903, Col. D. J. Baker, jr., assistant chief, Philippines Constabulary, was sent to Albay, and after a careful examination of the situation ordered and enforced a reconcentration of the affected towns. Shortly after Colonel Baker's arrival his troops succeeded in killing Máximo Rejel, one of Olá's favorite officers, who had conceived and executed the assault on the town of Oas. Upon relieving Colonel Baker of command I informed myself as to his arrangements, in order that by adhering to them as closely as possible the natives could see that our policy was not a vacillating one. I first arrived in Albay in June, 1903.

Reconcentration, as initiated in Albay by Colonel Baker and carried out by me, was the only system by which the situation in that province could have been handled, and I was very fortunate indeed to find it under such perfect headway under my predecessor when I assumed charge. With the comparatively small number of troops at our disposal, with the extent of territory and the large number of towns to be covered, and considering the superior strength of the enemy, it will be seen that the reconcentration could be such only in name.

One gentleman, Doctor Dougherty, who had recently arrived in the Philippines from the States for the purpose of independently investigating the conditions in these islands, arrived at Albay under the natural impression that there must be a great deal of suffering attendant upon any reconcentration. I invited him to go up the line in such company as he might select, with permission to investigate into everything, and requested him to report to me any case of starvation which could have been avoided or any case of abuse. He reported none whatever. If anyone suffered from hunger, he had only himself to blame, as arrangements were made by which all the people in any of the concentrated towns could work on the roads and receive more than a sufficient quantity of rice for their subsistence. Considering that towns with a population of 15,000 seldom had a garrison of 100 men, the impossibility of establishing a "dead line" or cordon about any such town can readily be seen. The reconcentration was enforced mainly by scouring the immediate vicinity of the towns by small patrols, and arresting all who were found beyond the prescribed limits. There was no merciless shooting down of defenseless people, even when they went beyond limits; they were simply arrested when possible and sent before the courts.

The object of this reconcentration was to prevent the *ladrones* from receiving supplies and assistance from the people of the *barrios*, and it was the only means by which this could have been accomplished. The moment *Oli* surrendered the reconcentration was raised and the people permitted to return to their homes.

At my urgent request Vice-Governor Wright and Commissioner Tavera visited the province of Albay during the fore part of the month of July, 1903, and promptly dispelled many illusions the people had held in regard to the treatment they might expect. Until this time they imagined that any complaints they made to the insular authorities regarding the conduct of the campaign would be believed and that the officer in charge of operations would be relieved whenever they so requested. As a direct and immediate result of the visit of Governor Wright and Commissioner Tavera there was a marked difference in the attitude of the more influential people, and it was apparent that they finally realized that they could hope for nothing until "*bandolerismo*" had been stamped out, and that indifference on their part was considered equivalent to sympathizing with the bandits.

During October and November, 1902, an armistice of forty days was granted *Oli*, with a suspension of hostilities, which afforded him an opportunity to recruit and recuperate. About the middle of November Major Garwood had a conference with him, which resulted only in a resumption of hostilities. In his captured correspondence *Oli* refers to this conference as an event during which nothing of importance took place and which he had participated in solely for political purposes. During the following February the bandits had secured at *Oas* the 47 carbines before alluded to, and with other small captures had increased their forces until it had attained the size previously mentioned.

The first really important and decisive engagement of the campaign after my arrival took place at the town of Jovellar. This town was garrisoned by a detachment of the Thirty-first Company, Philippine Scouts, and on July 15 was attacked by the major portion of *Oli*'s entire band, numbering 60 guns and 250 bolomen. At the time of the attack the town was defended by only 24 scouts, under Sergt. Nicolas Napolis, with a very limited quantity of ammunition. For three hours this little band stood off the persistent attack of twelve times their number, and I know of no instance in which native troops, commanded by a native noncommissioned officer, exhibited equal skill and bravery during an engagement of this magnitude. When their ammunition was nearly exhausted, Sergeant Napolis resorted to a ruse in order to deceive the attackers as to his really critical condition. He had two of his men make a dash for an adjoining house and bring back a candle box. When the men had returned, the scouts made a great pretense of breaking open this box, as though for additional ammunition, at the same time defying the enemy and daring them to advance. This caused a lull in the attack, and in the meantime Lieutenant Sutherland, with a detachment of 25 scouts, and Lieutenant Sommer, with an equal number of constabulary, appeared on the scene and completely routed the attacking party, driving them in a demoralized condition to the hills. They left 15 dead on the field, and afterwards confessed to having had 20 killed and 30 wounded. During this engagement the gallant defenders unfortunately lost 1 killed and 2 wounded. After his surrender *Oli* told me he had never dreamed of encountering such a stubborn resistance and that he expected a bloodless victory. He stated that the scouts throughout the attack scoffed at them and dared them to come on. Sergeant Napolis, I understand, is to receive a certificate of merit for his magnificent conduct on this occasion.

Taking advantage of the demoralized condition of *Oli*'s band after the Jovellar fight, I diminished the size of our field detachments, in order that the number of such might be increased. By this means the territory was much more completely covered and more thoroughly scoured, and the *ladrones* were so constantly harassed that they became discouraged and completely worn-out. This system soon began to bear fruit in the rapidly increasing surrenders of bolomen, of whom nearly 300 surrendered to Lieutenant Paegelow at Guinobatan alone.

On August 4 Sergeant Japon and 25 constabulary, while in camp, were attacked by Olá's bolomen, who suffered a severe defeat, leaving 15 dead on the field. On August 10 the same sergeant struck Olá's band and killed 12, 1 constabulary soldier being wounded in the cheek during the engagement. Shortly after this fight Sergeant Japon was promoted to subinspector. August 15 Lieutenant McCloud, with 9 constabulary, had a series of little engagements with ladrones, killing 6 and capturing 4. On this same date Lieutenant Carothers, constabulary, engaged the band of Tito Sacula, killing 3 of them. On the 18th Lieutenant McCloud, with a detachment of constabulary, surprised and completely routed a band of ladrones near Buena Vista, killing 23 and capturing 20. On August 24 Subinspector Japon and 30 constabulary engaged Olá's band between Molabos and Buena Vista, killing 23 bolomen and capturing 1 prisoner and 1 rifle. On September 15 Sergeant Short, with a constabulary detachment, defeated Toledo, killing 4 ladrones, capturing 1, and capturing 4 guns.

As a result of the Jovellar fight the spirit of our opponents seemed to be broken, and the remarkably small number of casualties among the scouts and constabulary was due to the half-hearted resistance of their enemies. After these successful engagements it was practically impossible to force the ladrones to fight at all. They were frequently surprised and many killed, wounded, and captured, but they did no more fighting worth mentioning.

In my experience I have never seen such an aggressive lot of bolomen as were those of Olá. They invariably formed his outposts, and covered such a large front that it was almost impossible to surprise his riflemen. On the offensive they could also be used to great advantage in the thick hemp fields of Albay. When these bolomen commenced to surrender the outpost duty fell upon the riflemen, and the heavy strain of guard duty soon broke them down. Nearly all of the men in the different bands when they surrendered were emaciated and covered with tropical sores, some of them having ulcers on their legs into which a man's fist could be thrust.

Toward the end of September I permitted Eligio Arboleda, the newly appointed presidente of Guinobatan, and a cousin of Simeón Olá, to enter into communication with the latter, whom I believed by this time to have been whipped into a reasonable mood. This culminated in his expressing a desire for a conference with any representatives I might send out. I therefore designated Don Ramon Santos (who is now governor of Albay), the aforementioned presidente of Guinobatan, and Lieutenants Pagelow and Pyle, of the scouts. Anticipating Olá's request for an armistice for the purpose of assembling his men, such as had been granted him in the preceding November, I directed my agents to inform him that they could enter into no discussion whatever; that absolutely no terms would be granted or considered, except an immediate and unconditional surrender, and that if he did not return to Guinobatan that very day I would, on their return without him, push the campaign with even increased vigor. Having heard that the ladrones feared they would be drawn up and shot on the plaza in case they surrendered, I authorized my representatives to inform Olá that such was not the American custom; that all who surrendered would be well treated as prisoners, and that they would receive a fair trial before the courts, which alone could determine their fate.

At 3 p. m. on September 25 Simeón Olá accompanied Lieutenants Pagelow and Pyle into Guinobatan, and there surrendered to me, with 28 men and 31 firearms, including all in his personal following on that date. After the surrender he promised to aid me in bringing in the rest of his followers, and this agreement he carried out to the letter.

Immediately after his surrender I sent him out with Lieutenant Pyle to locate his colonels, Loamo and Palermo, whom they finally discovered encamped about 6 miles out of the town of Oas. The date set for Loamo's surrender having passed without accomplishment and not knowing what insane ideas might have taken possession of him and his followers, I started out alone with Ramon Santos and one guide to ascertain the cause of delay and to force the issue. As Governor Santos traveled in a bull cart and I was mounted on an American horse, with the guide on a pony, we naturally reached the camp about 3 miles ahead of the governor, whom we met on our return. I found that Lieutenant Pyle had set out for Ligao some time previous, accompanied by Colonel Palermo, who had been badly wounded at Jovellar, and who was still suffering from his wound. Olá was with Loamo, and, immediately after meeting them the entire band surrendered to me, with 33 guns, and returned with me to Ligao, where they were disarmed. This took place on October 5.

The following also surrendered to me on the dates and at the places specified: October 2, at Ligao, Capt. Hermenegildo Repolero, with 5 men and 5 guns; October 13, at Guinobatan, Col. Lazero Toledo, with 13 men and 14 guns; October 23, at Ligao, Maj. Teofilo Bobis, of the band of Augustin Saria, with 3 guns.

In addition to these surrenders, Major Camposano surrendered to Lieutenant Pyle on October 4 in the vicinity of Ligao, with 14 guns, and on October 16 Col. Tito Sacula surrendered to Lieutenant Boone, Fourteenth Company of scouts, at Polangui, with 20 men and 6 guns.

These surrenders ended all organized ladronism or insurrection in the province of Albay, and there remained out only Augustin Saria on the Camarines-Albay border, with 8 guns, 3 of which have since been captured, and the larger portion of his men captured or killed.

The situation in Albay, which resulted in one of the most successful and extensive ladrone movements since the end of the insurrection, was peculiar, and for a long time its seriousness was not appreciated. It is now understood that it originated in a personal quarrel between Simeón Olá and Cirilo Jausian. When Olá was an insurrecto major, it is stated he burned Jausian's house to perpetrate a personal revenge, and that when the insurrectos surrendered, Jausian, who was presidente of Guinobatan, proceeded to get even, which resulted in Olá's taking to the woods and gathering together a few kindred spirits who had concealed guns. Toledo was shortly afterwards released from jail, resurected some guns which he had buried, and joined in the movement, although he was always, to a certain extent, independent of Olá. The financial condition in Albay never justified such an uprising, and the prisoners all maintained that they were satisfied with the American Government, but afraid of the vengeance of some of the local officials. I doubt if many really knew why they had joined in the movement. Throughout the campaign I impressed upon the people that we were waging a war against brigandage; that although Olá's men called themselves "insurrectos" they would not be granted belligerents' rights, and that when captured they would be held as criminals and not as prisoners of war.

As an anecdote of Olá, I would relate that during the campaign it was reported that he had an infallible "anting-anting," and that by looking into this charm he could tell at once if troops were approaching. After his surrender I asked him about this, and he produced an incandescent electric-light bulb, stating that when he held this bulb in his hand the wires vibrated rapidly if soldiers were near, and that otherwise there was no movement, adding that by its means he always verified the reports of his outposts. I explained to him that I feared his hand trembled somewhat whenever he heard that constabulary or scouts were approaching, and that otherwise it was more steady. He replied that this was possible, but that anyway the bulb possessed wonderful properties as an "anting-anting."

In addition to the constabulary, I had under my command during the Albay campaign the Tenth, Fourteenth, Twentieth, Twenty-sixth, Twenty-seventh, Thirty-first, Thirty-second, Thirty-third, Thirty-eighth, and Forty-second Companies, Philippine Scouts, stationed in the three provinces of Ambos Camarines, Albay, and Sorsogon, and a special report will be rendered on the efficiency of the officers belonging to these companies, excepting the Twentieth, Twenty-seventh, and Thirty-eighth, which are no longer on duty with the civil government. As a rule, the scouts and constabulary worked in perfect harmony during the continuation of operations.

During the entire year there were about 45 engagements in the province of Albay, resulting in the killing of about 225 ladrones and the capture or surrender of about 900 others, with 130 firearms.

The work of Capt. Harvey P. Nevill as senior inspector during the Olá campaign stamped him as a most superior officer, both in the field and along administrative lines. His able and energetic subordinates were Captains Fletcher and Swann, Lieutenants Taubee, Corfield, Galt, Scott, Kellermeyer, Kellogg, Fawcett, Coleman, Ward, Neil, and Sommer, and Subinspectors Bactat and Japon. Captain Nevill has since been transferred to Cebu, and Captain Swann is showing himself to be a worthy successor.

The scout officers and companies that participated in the above-mentioned campaign were Lieutenants Koch and Pyle, of the Tenth Company; Lieutenants Boone and Baker, of the Fourteenth Company; Lieutenants Mosely and McElderly, of the Twentieth Company; Lieutenants Paegelow and Rodgers, of the Twenty-sixth Company; Lieutenants Covell and Sutherland, of the Thirty-first Company; Lieutenants Wray and Drake, of the Thirty-second Company; Lieutenant Abbott, of the Thirty-eighth Company, and Lieutenants Roeder and Parrott, of the Forty-second Company. All of these companies and officers rendered most valuable service, and the officers, as previously stated, will be reported upon individually in a separate report.

That the success of the campaign was due to the combined efforts of all of the officers and men concerned, both constabulary and scouts, is shown by the following copy of a resolution of the provincial board of Albay:

Be it resolved by the provincial board of the province of Albay, That a vote of thanks of this body be, and hereby is, extended to Col. H. H. Bandholtz, Philippine Constabulary, for the excellent services rendered by him and the organizations under his command to the province in the suppression of bandolerismo and ladronism that for several months have disturbed the peace of the province.

[Seal of Albay Province.]

A. U. BETTS, Governor.
CHAS. A. REYNOLDS, Treasurer.
W. A. CROSSLAND, Supervisor.

That the people of Albay Province have returned in earnest to their peace-time pursuits is demonstrated by the fact that the exportation of hemp from that province since Olá's surrender exceeds that for any equal period in the history of the province.

AMBOS CAMARINES.

During the operations in Albay Province, the province of Ambos Camarines naturally suffered, especially along its southern border, which had been infested mainly by Tito Sacula, whose surrender has very materially eased the situation in that section.

A ladrone leader named Pablo Avila has for a long time carried on depredations on the Tayabas-Camarines border, and on the 19th of October he succeeded in entering the town of Ragay (of which he is understood to be a native), killed the wife of the presidente and also 1 policeman, and captured 7 Remington shotguns and 2 revolvers. This trouble is understood to be purely a local affair, and, as is frequently the case, was the result of a petty feud between the presidentes of Ragay and Avila. Since then I have had the Thirty-third Company of scouts at Daet and the Thirty-fourth Company at Ragay. They and the constabulary of the province have scoured the country thoroughly, have captured 5 of the guns and 1 revolver, killing 16 ladrones and capturing 10.

At present the scout companies mentioned are operating along the Tayabas-Camarines border, and the Forty-second Company of scouts, combined with the constabulary of Albay and Camarines, are operating against Saria on the boundary of those two provinces. The latter has recently suffered severely from surprises by the constabulary, and has been committing no depredations.

Captain Griffiths, the present senior inspector, has shown himself to be thoroughly equipped for the position, and is rapidly cleaning up the disturbed sections, being ably seconded in his work by Lieutenants Fawcett, McCloud, Neil, Schuetz, Butler, and Sommer.

The Thirty-third and Thirty-fourth Companies of scouts, under Lieutenants Davis and Baker, and Holtman and White, respectively, have been stationed in this province for the last few months and have initiated a very aggressive campaign against the ladrones of Camarines Norte.

MASBATE.

This province throughout the year has been very quiet and with practically no disturbances.

On April 2, 1904, Sergeant Moscare, with a detachment of constabulary, accompanied by Presidente Charles Babst, of the pueblo of Cataingan, captured 5 Cebu ladrones, including the leader, Marcos Negapatan, who was killed while attempting to escape.

Captain Collett, as senior inspector, and Lieutenant Lucas, as supply officer, have performed their duties efficiently and satisfactorily.

MINDORO.

This province since the termination of the insurrection had never been cleared of its ladrone element, and a large band under a leader named Gasic had infested the most populous section of the island ever since American occupation.

On July 19 Lieutenant Holtman, with a detachment of the Thirty-fourth Company of scouts, struck Gasic's band, inflicting upon it a very severe blow, killing 20 ladrones and capturing 20 guns.

After this Subinspector Basa laid a trap for Gasic, as a result of which he and Lieutenant Gilsheuser, on November 11, captured Gasic and his followers, with 17 guns and 2 revolvers. This was the death blow to "bandolerismo" in Mindoro.

During the year there were captured in the province of Mindoro about 50 ladrones and 42 guns.

Captain Fletcher, who captured the "Dos Hermanos" mutineers, and who alone in a personal combat killed several Albay ladrones in the spring of 1903, has been senior inspector of Mindoro throughout the year, and has been characteristically successful and efficient. Lieutenants Gilsheuser and Basa have also rendered conspicuous services.

Lieutenants Holtman and White, of the Thirty-fourth Company of scouts, Lieutenants Cheatham and Allen, of the Seventeenth Company, and Lieutenants Bennett and Morris, with the Forty-first Company, have all rendered valuable services in this province, and these officers will be reported upon separately.

ROMBLON.

During the year there have been no operations whatever in the island of Romblon.

When en route to assume command in Albay, I stopped at Romblon to investigate into reports of an uprising which was feared, and found as a result of my investigation that the fears were absolutely groundless.

There have been captured, however, about 14 petty thieves, who, in larger provinces, might have organized into ladrones.

Lieutenant Morrison, as senior inspector, has ably and successfully commanded the Romblon constabulary.

SORSOGON.

The northern portion of Sorsogon, being in close proximity to Albay, naturally suffered from the operations in the latter, and Toledo's band frequently visited the neighborhood of Donsol. His surrender, however, and Lieutenant Kellermeier's excellent work in destroying the small bands in the northeast portion of the province, have completely cleared up the atmosphere, and Sorsogon to-day is in a very quiet condition.

Captain Marshall has but recently entered upon the duties of senior inspector, but has so far given perfect satisfaction. Lieutenant Quinn, as supply officer and acting senior inspector, has rendered most efficient services.

TAYABAS.

During my absence in Albay a notorious bandit "cabecillo" named Mariano Leonesta, who had been one of the organizers in Albay, but who was driven out of that province by Olá for having stolen from the ladrones themselves, succeeded in getting together a few followers and raided the town of Gumaca, capturing the arms of the municipal police, who gave them up without a struggle. He afterwards raided the town of Catanauan in a like manner.

On my return to Tayabas from Albay I had the Tenth Company of scouts transferred to Sariaya, the Thirty-first Company to Atimonan, the Thirty-second Company to Caloaog, and the Seventeenth Company to Guinayangan. These, in conjunction with the constabulary, operated so successfully against the band of Leonesta (who frequently goes under the name of Roldan), that his men have been completely dispersed and nearly all of the guns recaptured. At last reports Leonesta, with a few followers, had returned to Camarines Sur. Later the town of Alabat, on the island of the same name, was raided, but by a different band, and the police promptly surrendered their guns, as is usual in such cases. These guns also have been recaptured.

I wish in this connection to particularly invite attention to the conduct of First-Class Private Pedro Jordan, who, while on an expedition with 6 companions, discovered a large band of about 50 ladrones eating their dinner in the vicinity of Mount Susa, near the town of Catanauan. Concealing his men, Private Jordan opened fire upon the ladrones, who, being surprised, immediately took to flight. Five of them were killed, and Private Jordan captured 4 guns. For his conduct on this occasion Private Jordan was promoted to corporal.

One of the worst sections of this entire district is that triangular portion of Tayabas Province which abuts upon the provinces of Batangas and Laguna. During the insurrection this was one of the worst holes in southern Luzon. Lieutenant Pyle has been stationed there for some months with a detachment of the Tenth Company of scouts, and has practically ended the thriving business in cattle stealing which had formerly been carried on by some of the more influential people. I am convinced that to this day there are a number of guns still concealed in that section of Tayabas, and in the neighboring provinces of Batangas and Laguna, but have faith in Lieutenant Pyle's ability to eventually locate them.

Maj. J. B. Murphy has served as senior inspector throughout the year, has been most active and successful in field work, and is exceptionally capable, energetic, and well qualified for his position. Capt. G. K. Armstrong has rendered highly efficient and satisfactory services as supply officer, and Captain Sorensen, Lieutenants Keesey, Coleman, Hearn, Stelton, Schroeder and Duval, and subinspectors Puno, Castro, and Campos, have also done excellent work.

For the last six months the Tenth, Seventeenth, Thirty-first, Thirty-second, and Forty-sixth Companies of scouts have been stationed in Tayabas, under Lieutenants Koch and Pyle, Cheatham and Allen, Covell and Sutherland, Wray and Drake, and Weusthoff and Metcalf. As previously stated, the officers mentioned will be reported upon separately.

During the entire year there have been, in round numbers, in this district 80 engagements with ladrone bands, resulting in the capture or surrender of 210 firearms, the killing of 350 armed enemies of the government, and the turning over to the courts for trial of 1,200 others.

While the district is at present the quietest in its history, I do not feel that vigilance can for a moment be relaxed. I estimate that there are still at least 50 firearms scattered and many concealed throughout the interior, and that there is enough ladron material in any one of the provinces to organize a good sized movement whenever there are arms or a favorable opportunity. It will take many years to destroy the bandit microbe in the system of the ordinary "tao," although the better classes already appreciate the difference between ladronism and insurrection.

Attention is invited to the fact that there are no indications whatever that any of the organizations in this district were ever in communication or connected with the Manila promoters or societies.

At present all of the provinces are remarkably quiet, and the people are devoting themselves to their usual peaceful pursuits. In Albay and Sorsogon the hemp trade should

AMBOS CAMARINES.

During the operations in Albay Province, the province of Ambos Camarines naturally suffered, especially along its southern border, which had been infested mainly by Tito Sacula, whose surrender has very materially eased the situation in that section.

A ladrone leader named Pablo Avila has for a long time carried on depredations on the Tayabas-Camarines border, and on the 19th of October he succeeded in entering the town of Ragay (of which he is understood to be a native), killed the wife of the presidente and also 1 policeman, and captured 7 Remington shotguns and 2 revolvers. This trouble is understood to be purely a local affair, and, as is frequently the case, was the result of a petty feud between the presidentes of Ragay and Avila. Since then I have had the Thirty-third Company of scouts at Daet and the Thirty-fourth Company at Ragay. They and the constabulary of the province have scoured the country thoroughly, have captured 5 of the guns and 1 revolver, killing 16 ladrones and capturing 10.

At present the scout companies mentioned are operating along the Tayabas-Camarines border, and the Forty-second Company of scouts, combined with the constabulary of Albay and Camarines, are operating against Saria on the boundary of those two provinces. The latter has recently suffered severely from surprises by the constabulary, and has been committing no depredations.

Captain Griffiths, the present senior inspector, has shown himself to be thoroughly equipped for the position, and is rapidly cleaning up the disturbed sections, being ably seconded in his work by Lieutenants Fawcett, McCloud, Neil, Schuetz, Butler, and Sommer.

The Thirty-third and Thirty-fourth Companies of scouts, under Lieutenants Davis and Baker, and Holtman and White, respectively, have been stationed in this province for the last few months and have initiated a very aggressive campaign against the ladrones of Camarines Norte.

MASBATE.

This province throughout the year has been very quiet and with practically no disturbances.

On April 2, 1901, Sergeant Moscare, with a detachment of constabulary, accompanied by Presidente Charles Babst, of the pueblo of Cataingan, captured 5 Cebu ladrones, including the leader, Marcos Negapatan, who was killed while attempting to escape.

Captain Collett, as senior inspector, and Lieutenant Lucas, as supply officer, have performed their duties efficiently and satisfactorily.

MINDORO.

This province since the termination of the insurrection had never been cleared of its ladrone element, and a large band under a leader named Gasie had infested the most populous section of the island ever since American occupation.

On July 19 Lieutenant Holtman, with a detachment of the Thirty-fourth Company of scouts, struck Gasie's band, inflicting upon it a very severe blow, killing 20 ladrones and capturing 20 guns.

After this Subinspector Basa laid a trap for Gasie, as a result of which he and Lieutenant Gilsheuser, on November 11, captured Gasie and his followers, with 17 guns and 2 revolvers. This was the death blow to "bandolerismo" in Mindoro.

During the year there were captured in the province of Mindoro about 50 ladrones and 42 guns.

Captain Fletcher, who captured the "Dos Hermanos" mutineers, and who alone in a personal combat killed several Albay ladrones in the spring of 1903, has been senior inspector of Mindoro throughout the year, and has been characteristically successful and efficient. Lieutenants Gilsheuser and Basa have also rendered conspicuous services.

As previously stated, the officers mentioned will be reported upon separately.

During the entire year there have been, in round numbers, in this district 80 engagements with ladron bands, resulting in the capture or surrender of 210 firearms, the killing of 350 armed enemies of the government, and the turning over to the courts for trial of 1,200 others.

While the district is at present the quietest in its history, I do not feel that vigilance can for a moment be relaxed. I estimate that there are still at least 50 firearms scattered and many concealed throughout the interior, and that there is enough ladron material in any one of the provinces to organize a good sized movement whenever there are arms or a favorable opportunity. It will take many years to destroy the bandit microbe in the system of the ordinary "tao," although the better classes already appreciate the difference between ladronism and insurrection.

Attention is invited to the fact that there are no indications whatever that any of the organizations in this district were ever in communication or connected with the Manila promoters or societies.

At present all of the provinces are remarkably quiet, and the people are devoting themselves to their usual peaceful pursuits. In Albay and Sorsogon the hemp trade should

keep those provinces in a flourishing condition. In Ambos Camarines the same remarks apply to Camarines Norte, but the major portion of Camarines Sur, being essentially a rice country, has suffered severely on account of the lack of a sufficient number of carabaos to cultivate the paddy. In Tayabas the rice crop has been sufficient for the needs of the people, but there is a temporary financial depression, owing to the drought of last year, as a result of which the cocoanut trees this year are bearing but very little fruit, and the making of copra is the main industry in this province. The three island provinces of Mindoro, Romblon, and Masbate are quiet and seem to be enjoying a moderate amount of prosperity.

Referring to the report of Capt. J. M. Wheate, district surgeon, which is hereto appended, I differ with him emphatically as to his expressed opinion on the "unfitness of the Bicol for the duties of a soldier." Doctor Wheate, when rendering his report, was probably not aware that Ambos Camarines is almost as much Tagalog as Bicol, and his opinion was evidently based upon the large sick report at Nueva Caceres, which, I believe, was due to his first assigned reason—the unhealthfulness of the locality. Although the town in question is 25 miles inland, up the Bicol River, it is so low that the Pacific tide rises several feet at the wharves, and it was abandoned as a military post for the reason stated by Doctor Wheate. The Thirty-second Company of Philippine Scouts did as much, as successful, and as hard fieldwork as any other company during the Oli campaign, and showed even less amount of sickness than among many of the other companies. The Thirty-second Company is composed exclusively of Bicolos, and among the others were similar organizations of Tagalogs, Visayans, Ilocanos, Cagayanos, and Macabebes. The Albay constabulary was superior to the detachments of Visayans, Tagalogs, and Ilocanos on duty with them, but this was probably due to the first named serving in their own province. For me, it would be difficult to state which one of the large native tribes furnishes the best soldiers. I am convinced, however, that in proper hands the Bicol makes an excellent soldier, and that he does not merit such harsh criticism. During the period in which the Albay sick report assumed its largest proportions there were on duty in that province constabulary from Negros, Masbate, Romblon, Marinduque, Pampanga, and Tarlac, all of whom I had relieved at the earliest practicable date because their services, compared to that of the Bicol constabulary, were of little value on account of sickness. As to physical courage and other necessary attributes of a soldier, I believe that the Bicol is the equal of any, and that Doctor Wheate's deductions in this particular were based on false premises.

Tables giving statistics as to strength, pay, etc., have been appended to this report.

As a result of our unfortunate experiences during the past year, I have disarmed practically all of the municipal police in this district, and am of the opinion that it would be a good idea to replace such police entirely by constabulary, allowing each town a messenger and town crier. In times past it has been the custom of municipal officials to consider their police as servants, and as long as the appointment and paying of the police are left to the municipal council, these conditions will continue.

The provincial governors and provincial officials throughout the district have aided the constabulary in every way possible, and there has been perfect harmony between these two branches of the government service.

I feel it also to be my duty to make special acknowledgment of the immense value of the services rendered us during the Albay campaign by Don Ramon Santos, who was subsequently elected governor of that province.

In August, 1903, Ruperto Rios, the celebrated "tulisan" leader and self-styled "pope of Tayabas," was hung at Atimonan, his native town. He had been driven out of Tayabas as a result of Major Murphy's tireless fieldwork, and was captured in Laguna through the skill of Captain Grove. Upon my recommendation, he was sent to Tayabas for trial, where he received the death penalty from Judge Lineberger, and expiated his numerous crimes as above stated.

In Albay Judges Carson and Blount at one session dispensed justice to several hundred bandits of that province, who were prosecuted by Supervisor of Fiscals Ross. During the campaign I had captured a well-kept and complete set of Oli's records, in which were entered the details of all of their expeditions, attested to by the signatures of his more important officers. In addition to this, I turned over to Governor Ross a statement signed, voluntarily, by every one of the ladrones to the effect that he had belonged to some one of the ladron organizations of that section. Lázaro Toledo, Hugh Palermo, and all who were found guilty of capital crimes, received the death penalty. Simeón Oli, Tito Sacula, and a large following, were sentenced to from twenty to thirty years at hard labor; and the others received sentences also proportionate to their crimes.

The courts have invariably put a beautiful polish upon all cases turned over to them by the constabulary, in this way contributing their full share to the work of pacification.

Very respectfully,

H. H. BANDHOLTZ,

Colonel and Assistant Chief, Philippine Constabulary, Commanding.

THE ADJUTANT-GENERAL, PHILIPPINE CONSTABULARY,
Manda, P. I.

REPORT OF THE DISTRICT SURGEON.

HEADQUARTERS SECOND DISTRICT, PHILIPPINES CONSTABULARY,
OFFICE OF THE DISTRICT SURGEON,
Lucena, June 30, 1904.

SIR: I have the honor to make the following report of the work of the medical division in the second constabulary district for the year ending June 30, 1904:

* * * * *

RECAPITULATION.

It is to be regretted that in a report of this nature I am unable to furnish accurate statistics relating to the cost of administration of the medical division in the district. This inability is explained in the fact that district medical officers are neither disbursing nor auditing officers. This appears to me to be a weakness in the administrative plan of the service. I have no means of knowing how much money the various supply officers disburse on account of the medical division except by courtesy of the officer in replying to inquiries made. In endeavoring to estimate the cost of providing medical treatment and care for the constabulary, I have not been able to obtain data from all of the provinces, nor can I claim accuracy for the record of admissions to sick report in the remote stations.

A summary of expenditures by provinces, as far as can be ascertained, is as follows:

Ambos Camarines:	
Rent of building.....	P 100. 00
Laundry (done by prisoners).....	
Supplies purchased locally—	
Furniture, bedding, etc.....	49. 00
Medicines and medical supplies.....	170. 00
Total.....	<u>269. 00</u>
Albay:	
Rent of building (building costing P100 per month, shared with constabulary headquarters, provincial supply officer, and hospital, estimated as share of hospital).....	360. 00
Laundry.....	50. 00
Supplies purchased locally during campaign in Albay Province.....	1, 000. 34
Total.....	<u>1, 410. 34</u>
Masbate: Pro rata share of district supplies.	
Mindoro: Paid to military hospital for treatment to enlisted men of constabulary.....	540. 00
Romblon: Pro rata share of district supplies.	
Tayabas:	
Rent of building.....	600. 00
Laundry.....	60. 00
Supplies purchased locally—furniture and equipments.....	89. 50
Total.....	<u>749. 50</u>

These incomplete lists are of little value save to emphasize the faulty methods of the past and the necessity for adopting a system of reporting and recording all data that can be of future use to the constabulary. Until quite recently no reports of this nature were required of the medical division, and hence no measures were taken to secure them, and as a consequence the reports of expenditures during the first half of the fiscal year are necessarily more or less inaccurate, in that the custom of the provincial supply officers, I am told, has been to pay many items of indebtedness incurred by the medical division from appropriations for "transportation," while others were paid under the head of "contingent," and in the limited time at my disposal for the compiling of this report it has been impossible to have old records researched by the various supply officers to supply the desired data.

It may be of interest to present this feature of maintenance of the medical division in another light, with a view to discover its utility and demonstrate its necessity from an economic standpoint.

From recorded data acceptedly correct we find the following:

Total admissions to sick report, hospitals and quarters.....	765
Total number days lost due to sickness.....	6, 792
Average number days on sick report.....	8. 8 +
Average number of days on sick report for each man in district.....	. 67 +

To this must be added a conservative estimated number of sick in quarters of which no accurate data has been kept by the detachment commanders in remote stations. The method employed in estimating this number is based upon the known per cent of death rate of cases in hospital. For example: There were 37 deaths recorded in the district during the year; 20 of this number occurred in hospital, while 17 occurred in stations not accessible to hospitals. Now, of the 765 admissions to sick report of the table above 2.6 per cent died, and upon this basis of calculation there would appear to have been 1,406 admissions to sick report in the entire district. In reality, I am convinced that this method of calculation is too conservative, for it is only the seriously sick that are brought from isolated stations to hospital, and the very great majority of cases occurring in such stations are not reported, and I believe it to be within reason to estimate the total number rightly classed as "admissions to sick report" at 1,500, with a total of 10,000 days lost on account of sickness. The totals would then stand:

Admissions to sick report.....	1,500
Days lost on account sickness.....	10,000
Average number days sick per man on sick report.....	6.6
Average number days sick for each man in the district.....	10

Again, as nearly accurate an estimate of expenses for the year on account of maintenance of the medical division as can be herein reported is as follows:

PERSONNEL.

One district surgeon: Salary and allowances.....	\$1,550.00
Three medical inspectors: Salaries and allowances.....	3,000.00
Nineteen enlisted men: Last half fiscal year.....	1,750.00
Supplies: Medical supplies, including local purchases, rents, laundry, transportation, etc.....	2,250.00
Total.....	9,020.00

This can not be far wrong in estimating the entire expense of maintaining the medical division in this district. Estimating the average strength of the district for the year to be 1,100 officers and enlisted men, it will readily appear that the cost of providing for the actual and possible professional necessities of this district is less than \$9 per man per year. When this is compared to the sum necessary to provide medical service for the Army of the United States we find it to be less than one-half the amount.

Respectfully submitted.

J. M. WHEATE,

Captain and Surgeon, Philippines Constabulary, District Surgeon.

THE ADJUTANT, SECOND CONSTABULARY DISTRICT,
Lucena, P. I.

REPORT OF THE THIRD DISTRICT, PHILIPPINES CONSTABULARY.

HEADQUARTERS THIRD DISTRICT, PHILIPPINES CONSTABULARY,

Iloilo, Panay, June 30, 1904.

SIR: I have the honor to submit herewith the annual report for the third district, Philippines Constabulary, for the fiscal year ending June 30, 1904:

* * * * *

The foregoing chronology of events will give a fair idea of occurrences throughout the district which have affected directly public peace and order. By comparison with my annual report of a year ago it will be noted that there has been an entire absence of any event or disorder of particular magnitude.

The provinces of Surigao and Misamis were transferred on the 1st of October to the fifth district, and at that time both can be said to have been quiet and peaceful. Three days before this date occurred the piratical escapade of Captain Herrman and Supply Officer Johnson, of Misamis. Supply Officer Johnson was found several hundred dollars short in his accounts, due to excessive drinking and gambling, and was still under investigation when charges were preferred against Captain Herrman by Captain Green, for misconduct while senior inspector of the province of Bohol. The wild idea entered Herrman's head to escape punishment by fleeing from the islands, and by taking advantage of Johnson's condition induced him to rob the safe and attempt escape with him to Borneo. On the 27th of September Herrman and Johnson quietly hired the launch *Victoria*, then in the harbor of Cagayan, compelling the master of the steamer *Irene*, which was also in the

harbor, to give them a supply of coal. With them were two privates of constabulary and a Spaniard, who was a passenger on the boat. They went to Balingao, on the opposite side of Iligan Bay, where the Spaniard, learning of their intention, made his escape. The captain of the boat was then compelled to go where ordered, and a start was made for Borneo, but the captain soon convinced them that he would have to obtain more fuel at once. They then proceeded to Bayauan, on the south coast of the island of Negros, and when Herrman and Johnson went up the river to visit an old friend of the latter the captain ran his launch on a sand bar, opened the sea valves, and flooded the vessel, making representations to Herrman and Johnson upon their return that she had sprung a leak and that they could go no farther. The ruse appeared to work very well, and the two deserters, together with the two enlisted men, embarked in a barota and started up the west coast of Negros. Arriving at Asia their efforts to obtain a two-masted prao to carry them to Cagayancillo aroused the suspicions of one of the enlisted men, who up to this time believed the officers to be acting in the performance of their duties, and that they were going on an extensive expedition. Failing to influence his companion, he deserted the party and returned to Bayauan, where he reported to the presidente, while Herrman and Johnson and the other enlisted man embarked at Asia on a prao with six natives as crew and started for Cagayancillo. The captain of the prao objected to going on in the face of a severe storm which was approaching, and Herrman was compelled to threaten him and his crew with death if they did not proceed. They acquiesced, and the journey continued until about 8 o'clock the first evening. At that hour Herrman, Johnson, and the soldier sought shelter from the rain beneath the canopy and all fell asleep. Herrman claims that Johnson was supposed to have been on guard. Suddenly the native crew, attacking the three with bolos and daggers, succeeded in mortally wounding Johnson and severely wounding Herrman and the enlisted man. As soon as Herrman could bring his revolver into play he killed four of the crew and compelled the others to jump overboard. As these two men have never been heard from it is presumed they were drowned. Herrman guided the prao back to land, where he buried the money. He then deserted the prao, leaving in it the dead body of Johnson and the wounded enlisted man. He made his way down the coast to Bayauan and started back into the hills. The natives who found the deserted prao sent word to the constabulary post of Sipalay, and a detachment was soon on the scene. The body of Johnson was buried on the beach and the prao with the wounded enlisted man was turned over to Lieutenant Conway, of the constabulary of Cabancalan, Negros. Herrman was captured on the 14th of October, a few hours back of Bayauan, by Captain Haskell, Philippines constabulary. He is now serving a sentence of seventeen years in Bilibid. About 1,800 pesos of the money Herrman buried were recovered.

The peace of the province of Samar has been menaced by a band of Pulajans, who roam about the mountains between Calbiga and Borongan. The center of operations is the sitio of Magtaon. This band is headed by one De la Cruz, who has 9 rifles, and usually travels about with a force of 15 or 20 men. On February 13, Lieutenant McCrea, of Borongan, following up information, located De la Cruz some two hours out. At this time the Pulajans numbered nearly 100, as the people of the surrounding country had been called together by the leader. Lieutenant McCrea went out with a force of but 7 men, and when he attacked he had but 4 men with him. Although the Pulajans at this time had but 5 rifles they readily overpowered and killed Lieutenant McCrea and his 4 men. The 3 men who had been detached about half a mile back remained in the vicinity and watched the outlaws until the arrival of the constabulary and scouts the following day, when another fight occurred, in which 1 scout was killed and 1 constabulary wounded. The Pulajans were dispersed and the bodies of Lieutenant McCrea and his 4 men recovered and taken to Borongan. Numerous expeditions scouting the interior have since failed to come in contact with this band, although several bands of bolomen have been encountered and a few men killed.

Aside from the protecting force on the island of Biliran, the constabulary of Leyte are concentrated in the northern section, with Jaro as the center. The Pulajan force of Juan Tomajo is occasionally heard from, and although numbers of his men have been killed and captured, yet the leader remains free to organize fresh bands, making the section unsafe. The Ormoc leader Papa Faustino was killed, together with 21 of his followers, on July 30, by Civilian Scout Connors. His fall cleaned up the west slope and no trouble occurred there until January 23, when Lieutenant Flores, operating from Dolores, in the mountains of Jaro, lost 3 men killed and 4 carbines in a fight with Pulajans. The barrios of Dolores and Valencia still contain garrisons of constabulary and are rapidly growing to be prosperous communities. A year and a half ago the majority of men in these barrios operated with the Pulajans, but they have proved themselves in the past year to be loyal supporters of the constabulary. The municipal police of Leyte are the most proficient of any province, due to the energy of the provincial governor, Major Borseth, of the constabulary.

In Cebu the bands of Quintin and Aday still hold forth in the mountains of Sudlum, about twelve hours out from the town of Cebu. Although Lieutenant Luga captured 2

guns from these people in March last, and many of them have been killed, yet the leaders remain to furnish a refuge to lawless characters.

With an increase of force in this province permanent posts will be established in the mountains. It has been asserted, and I give it considerable credence, that the existence and operations of the volunteers after the general operations of 1903 had broken up the movement had a tendency to keep alive the Pulajan agitation, because of the abuses of the volunteers creating new enemies and increasing the feeling between the people of the mountains and those of the towns. For this reason the volunteer organization has been allowed to die a natural death, and operations by them have been discouraged.

The provinces of Bohol and Negros Oriental have been entirely without incident, and the people are exceedingly peaceful.

The province of Occidental Negros has been quite peaceful throughout the year, although there have been a few cases of carabao robbing. The famous Papa Isio, after more than a year in seclusion, sent a band of men to one of the outlying haciendas on the 14th of March, and taking the hacenderos by surprise captured 2 rifles and a Mauser pistol from them and returned to the mountains, taking 2 hostages. A couple of days afterwards the constabulary struck the band in the mountains, without, however, succeeding in doing them much damage. One of the hostages was rescued, while the other was boloed before the arrival of the constabulary. A few weeks later Captain Smith, with 2 officers and 4 enlisted men, after a four days' search in the mountains, came upon Papa Isio and killed 2 of his generals, capturing 2 rifles, together with all the church paraphernalia, clothing, supplies, etc. The "papa," as usual, escaped in the bushes. Occidental Negros will probably never be free from fright until this man Papa Isio is captured. This is the only depredation that he has committed in more than a year and a half. He has but few followers, but seems able to strike terror in the hearts of both natives and Spaniards, although most of the hacenderos are well supplied with arms, some of them having 6 or 8 rifles.

The province of Capiz has but one band of ladrones, under the leadership of Julian Ver-tosa, who holds forth in the mountains in the eastern section of the province. His is one of those bands which roams about the country and live off the mountain people, seldom bothering the lowland sections. The carabao stealing and depredations by what are known as local ladrones have almost entirely ceased since Captain Jones, in September and October last year, corralled the carabaos of all the towns, checked them up, and instituted several prosecutions against the principal officials. This broke up the traffic in carabaos and consequently the motive for robbery.

Antique Province has not been as quiet as usual and in the northern part Subinspector Salvador has pursued and killed many of the mountain band of Ompong and Pitoc. The principal ladron or leader of the Montescas, Ompong, went into the barrio of Ibajay, Capiz, on October 7 last year and killed 13 people—men, women, and children—apparently in pure wantonness. He gives as his reason that one of his children died, and it was necessary that it should have servants designated to attend it in the next world. An effort was made to obtain the assistance of the governor of Capiz and the people of the western portion of that province to unite against Ompong and his Montescas, but the results were not in the least satisfactory, as the people appeared to be entirely without a feeling of unity, being apparently confirmed predestinarians.

At this writing the civil governor of the province and Lieutenant Beazley and Subinspector Salvador are at Pandang having a conference with Ompong and Pitoc, and it is expected that they will surrender with the 6 rifles that they have. They were assembled and ready to do so a few days ago, but as the provincial governor was not present they returned to the mountains. Without rifles these mountain bands will undoubtedly cease to further molest the people of the lowlands.

To the province of Paragua attention was directed by the unfortunate affair of February 16, in which the 4 men of the Forty-eighth Company of Philippine Scouts were killed and 31 carbines lost to the Moros. It seems that Lieutenant Loudin with a detachment of his company, while on a map-sketching expedition in southern Paragua, left their sailing vessel with their carbines on board in charge of 4 guards while the detachment went ashore to await the passing of the storm. The few Moros who were in the boat killed the 4 guards, set sail, and escaped with the 31 carbines. A detachment of scouts and constabulary under the provincial governor, who is an army officer, encountered the Moros at Kulasian and succeeded in recovering 8 carbines. At this writing another expedition is out to again locate the Moros.

A wonderful change has taken place in the province of Iloilo during the past year and carabao stealing, which was a curse to the province, has been reduced to a point even below that in Spanish times. The chronological list of events will indicate the activity of the ladrones and in a measure that of the constabulary in this province. No mention is made of the numerous expeditions and patrols which returned without appreciable results. As a result of the operations a goodly number of serviceable firearms have been surrendered in the past few months and the prospects are good for the surrender of more by the mountain

people. They have time and again signified their willingness to be good if only left alone, and, as far as we have been able to determine, the mountain bands which formerly gave so much trouble have not in the past year committed robberies or depredations to any extent. The persecution of the armed bands has led them to make overtures of peace and promises of surrender. A number have presented themselves during the last few months, turning over good serviceable rifles, and have gone out and brought in others. It was thought that Torribio would surrender with his men and arms in the month of May, but at the last moment he failed to do so, although he did send in 3 rifles as indication of his sincerity. Negotiations are now under way with a subcaptain of Torribio who has in his hands all of Torribio's rifles, and it is quite probable that a number of them will be surrendered.

The old hard-shelled Sano still refuses to surrender, and as long as he commits no depredations will not be further molested until the constabulary are through with the others, who are now slowly coming in. Further back in the mountains is to be found the band of Oto with 12 or 15 arms, but as this band has never been known to commit any depredations and is a long distance away, but little attention has been paid to it. Patrols are occasionally sent through that section to recover carabaos which find their way there, but the people offer no resistance and hide themselves on the approach of an armed force. If the officers at present in this province continue the work of the past few months very satisfactory results are expected to follow. The outlawry has been almost entirely confined to what is known as local ladrones or those who live in and about the barrios and prey upon one another with the knowledge and assistance of their neighbors. Carabao stealing will never entirely cease in Iloilo as long as the people of Negros are permitted to purchase animals in the province. The demand by the wealthier hacenderos of Negros creates a market for stolen animals.

I can not close my remarks on the work in the province without special commendable mention of the work of Captain Haskell and Lieutenants Countermarsh and Lewis and Subinspector Martinez.

Take it all in all, conditions throughout the district as regards to outlawry and criminality are much improved over six months ago and considerably more so over those of a year ago. Owing to the character of the people with whom we have to contend, it is to be expected that the existence of small bands of outlaws will continue for an indefinite period of time, although as the constabulary increases in efficiency and the municipal police and municipal officials are required to perform their duties as they should, criminality is bound to remain at the minimum.

THE MUNICIPAL POLICE.

There has been considerable improvement in many of the pueblos in the police organizations and in the work performed by them. As the financial conditions become better more attention is given to the pay and equipment of the police and in many towns their pay exceeds that of the constabulary. There are a great many rifles in the hands of the police, the issue of which was made necessary because of the lawlessness which existed and the inadequacy of the force of constabulary. With a knowledge of the readiness with which a band of outlaws can gain headway when once they come in possession of rifles, I would like to see more hesitancy in the granting of permits to municipal police and to private individuals. This opens the question of the general license of arms, and it is one which appears to me as deserving of more stringent rules and less liberality. I would like to see revolvers distributed in goodly numbers throughout the islands for the personal protection of individuals and the moral effect it would have on bands armed only with bolos. When it comes to the issuing or granting permission to possess rifles and shotguns, however, the privilege extended should be gradually withdrawn in proportion to the degree of necessity.

THE CONSTABULARY.

The majority of the officers of the district are worthy of the highest praise for intelligence and conscientiousness displayed in the performance of their arduous duties. Difficulties have not been few, but nevertheless have been surmounted to a degree highly satisfactory to the district commander. It is true that in some instances much remains to be desired, but I place the fault less with the individual and more with the adverse conditions under which the constabulary was started.

First and above all, I advise the establishment of a school for both officers and men. The constabulary is slowly but surely evolving into an organization of a character and scope far beyond that contemplated in its conception. The necessities of the situation have forced that issue until nothing but a radical change of governmental policy can divert it from the goal to which it is heading. Why, then, hesitate longer to give it the impetus that will insure its permanency and future standing? It is not to be an army in the common acceptance of the word, but an insular police, organized and maintained on military prin-

ciples without the prerogatives of the military. Discipline signifies regularity, and strict obedience to laws and orders which promote union of action and conduct. A well-disciplined force is to be relied upon and instills confidence in itself, its superior officers, and in the people for whose protection it exists. Its principles must necessarily emanate from but one source. By force of circumstances, the constabulary has worked from the extremities toward the center in matters of schooling. Each post commander gave such instruction as his abilities and energy permitted; then each provincial commander sought to establish a school for his province; then the district commander a school for his district, and now, if a central school could be established our rapid advancement toward a perfect organization will be assured. The only drawback has been in the insufficiency of officers and men to be spared from the field.

PAY OF OFFICERS AND MEN.

This is a delicate subject to handle in view of the pressure from all bureaus on the government treasury, with their arguments as to their relative importance to the success of the government. Progress is contingent upon the establishment and maintenance of peace and order, and charged with this duty, the constabulary above all merits a consideration for its needs and its efforts at self-improvement. The pay of the officers in the lower grades should be sufficient to insure their retention in a service in which experience is so great a factor. The pay of the enlisted men, and particularly the noncommissioned officers, should be sufficiently above that of municipal police to serve as an inducement to the more intelligent young men to enter the service with aspirations for higher honors. Imbued with American ideas of perfection and organization, many municipalities are actuated to offer better pay to municipal police than can be obtained in the constabulary. The liberal distribution of rifles to the police encourages them in this matter. As against the municipal police and the scouts the lesser pay of constabulary makes recruiting of good men very difficult.

THE SUPPLY DEPARTMENT.

Too much can not be said of the work of this department in the past year. This district, although distant from Manila, has felt the effect of the systematic work of Colonel Baker and his subordinate officers as evidenced in the now nearly complete equipment of all provinces. No special recommendations are to be made, as it is quite evident that everything essential to the success of the organization is being provided with commendable expedition. The confusion formerly so extant has entirely disappeared by the institution of system and regularity.

BARRACKS AND QUARTERS.

This is a subject worthy of some contemplation. In few of the provincial capitals are to be found buildings suitable for offices and storerooms, and barracks for the men. The guarding of provincial jails, furnishing escorts for officials and prisoners, enlisting and instructing the recruits necessitates the maintenance of a force of about 60 men at each provincial headquarters. In several places land can be obtained from the insular, provincial, or municipal governments. Buildings constructed of nipa would be much preferable to present arrangements. When so constructed they could be improved from year to year by the substitution of boards for the nipa. The exorbitant rentals now forced upon us would pay for such buildings in a very few years.

SUBSISTENCE.

General Orders, No. 94, headquarters Philippines Constabulary, series 1903, making provision for the subsistence of the enlisted men of the constabulary, was not a step, but a bound, in the evolution of the constabulary from a guerrilla, volatile existence to a condition of stability and permanency. The provision of 21 centavos per day is ample for both garrison and field duty, and officers of ability experience no difficulty in providing for their men a good ration. Rice is recognized by all as a most improper food when consumed in such large quantities as is customary with the lower class of Filipinos. Every effort is being made to gradually decrease the allowance of rice and substitute therefor mangos, American beans, vegetables, bread, pork, fresh beef, canned roast beef, bacalao, etc. In most provinces the savings have been sufficient to furnish a variety far in excess of that to which the men have been accustomed. This tends to strengthen the system and to reduce sickness to a minimum, while the element of fastidiousness heretofore unknown in Filipino character is beginning to develop as the enlisted man finds himself better clothed and subsisted.

If the heart of a man is to be reached through his stomach the present provisions for the subsistence of the constabulary will bind the enlisted men to the service more surely than any other factor.

TRANSPORTATION.

Experience in this district has not warranted the use of the native pony for a mounted force. Officers are able to keep one or two ponies in good condition for their use alone, and but little success has resulted in efforts to maintain mounted detachments. The ponies of the Visayas have been so depleted by disease that the few remaining are, if strong, to be had only at very high prices or, if weak, are difficult to get into shape for service. The supply of Chino ponies, mules, carabaos, vacas, wagons, carts, and carriages has been increased to a considerable extent during the past few months. Twelve cargo boats were recently purchased in Hongkong to be used in loading and discharging coast guard and transportation vessels. More will be purchased as funds are available. All these provisions reduce to a considerable extent the cost of transportation, as at ordinary rates of hire a vehicle or boat will pay for itself in a few months.

TEXT-BOOKS.

At the present time the officers in command of posts have access to no other matter of instructive reading than the general orders of the chief of constabulary and the district chief. Text-books on all subjects should be furnished supply officers to be issued to all officers on memorandum receipt. It would be but a recognition of the necessity of constant study and application.

I would respectfully recommend that the following be made available for the use of all officers: The Official Gazette (Spanish copies to all native officers); Butt's Manual of Calisthenics; infantry drill regulations; infantry firing regulations; manual of guard duty; A text book on map sketching; Pilcher's First Aid in Illness and Surgery.

TARGET PRACTICE.

The pointing and aiming drill, followed by target practice, is a very important element in the efficiency of the constabulary. The habit of shooting from the hip and absence of deliberation in aiming and firing makes it quite necessary that target practice should be a subject for special instruction by an officer detailed for the work. The present allowance of 25 rounds per man annually could well be increased to 50. Good results would follow if an inspector of target practice could be appointed for each district. Such an officer should be continually engaged in traveling from post to post giving instruction to officers and men alike. Targets at present being used are only such as post commanders can devise from material at hand and the results consequent upon such irregularity can not well be compiled into comprehensible statistics.

DEATHS AND DESERTION.

The losses from deaths and desertion compare very favorably with that of last year, the total losses by death being 47 for this year as against 118 last year; while the losses by desertion were 9 for this year as against 26 for last year. There having been no deaths from cholera it will be noted that the provinces of Leyte, Samar and Cebu are the greatest sufferers in death from disease which is attributed principally to beriberi. The increase in death in Paragua was due to beriberi on the island of Balabac and can be attributed primarily to improper quarters and poor food. With the presence of an American officer and the institution of the recent provisions for subsistence it is expected that further losses from beriberi will be at a minimum.

RELIGIOUS QUESTIONS.

The agitation against the frailes heightened by the organization of the Aglipay or Independent Filipino Church is confined to the provinces of Antique, Iloilo, Negros Oriental, Negros Occidental, and Cebu. In other provinces the movement has made but little impression. The question has at no time assumed a serious aspect but the feeling throughout those provinces against the frailes remains unabated and extends even to those who still adhere to the Roman Catholic Church. The Aglipay or Independent Filipino Church has for its followers the people who compose the radical element, and we find in their midst both men of the nationalist and federal parties. The elements which were formerly known as Americanistas and insurrectos are now found side by side. There are some who feel that the new church is but a cloak to a new insurrectionist society, but this I do not believe worthy of any consideration. Taking the question all in all, the division between the Roman Catholic Church and the Independent Filipino Catholic Church does not hinge on politics, as people of all parties and beliefs are to be found on both sides.

Respectfully submitted.

W. C. TAYLOR,

Colonel and Assistant Chief, Philippines Constabulary, Commanding.

The ADJUTANT-GENERAL, PHILIPPINES CONSTABULARY,

Manila, P. I.

REPORT OF THE FOURTH DISTRICT, PHILIPPINES CONSTABULARY.

HEADQUARTERS FOURTH DISTRICT, PHILIPPINES CONSTABULARY,
Vigan, Ilocos Sur, P. I., June 30, 1904.

SIR: I have the honor to submit the following report of conditions, operations, occurrences, and the status of the Philippines Constabulary in the provinces comprising the fourth constabulary district for the fiscal year ending June 30, 1904:

Per verbal orders of the chief of constabulary, Maj. Jesse S. Garwood, assistant chief, Philippines Constabulary, in General Orders, No. 1, headquarters fourth district, Philippines Constabulary, dated Vigan, June 25, 1903, assumed command of the fourth constabulary district, comprising the provinces of Abra, Benguet, Cagayan, Ilocos Norte, Ilocos Sur, Isabela, Lepanto-Bontoc, and La Union, and established headquarters at Vigan.

Inspection trips have been made personally by the district chief during the year in all sections of the district and in all provinces, including the remote district in the interior inhabited only by savage Igorrotes.

Conditions in the district at present as to peace and tranquillity are excellent. There is no band of dangerous ladrones at large in the district. Cattle thieving is very common, however, in some of the provinces, but is being rapidly eradicated. An American deserter named Sibley is at large in the wild mountain district between Dumabato, Isabela, and Casiguran, Tayabas, but he is being constantly pursued and is not a very dangerous character. The state of the constabulary as to efficiency and drill is good. Efficiency of officers is also good. The two most important occurrences which marred the peace of the district during the year were the Vigan mutiny and what was styled as the "Tomines insurrection" in the Cagayan Valley. The former was successful at first, but all the mutineers except three were captured in a short campaign, lasting only eleven days. This campaign was joined in by parts of three scout companies (the first, twelfth, and fifteenth), three troops of the Eleventh Cavalry from Camp Wallace, San Fernando, and detachments of constabulary from the headquarters troop and the provinces of Ilocos Sur, La Union, Abra, Lepanto-Bontoc, and Ilocos Norte. The Tomines campaign was somewhat longer drawn out, but was successfully brought to a final close on March 30 by the capture of the bandit chief Tomines himself, most of his men and arms having been captured before him. Accounts of these operations will be found under the captions for the provinces of Ilocos Sur and Isabela, respectively.

There have also been some troubles with the wild Igorrotes in Bontoc, but these, while occurring in Bontoc, were caused by hostiles from Nueva Vizcaya coming over the boundary against tribal enemies. This matter is reported in detail under the head of Lepanto-Bontoc.

The conditions, operations, and occurrences in the fourth district for the fiscal year of 1904, given by provinces, follow:

ABRA.

Disposition of constabulary June 30, 1904.—Banguet, Second Licut. H. A. Duryea, senior inspector and supply officer; Third Licut. Honorato Ballesta; 76 men. San Jose: Detached service, Isabela, Subinspector Guillermo Ferrandez, 10 men; fourth district band, 3 men. Total, 2 stations, 3 officers, 89 men. Authorized enlisted strength, 100.

Expeditions and patrols, 10; miles covered, 441; engagements, none; outlaws killed, none; outlaws wounded, none; outlaws captured, none. Arms and ammunition captured, 1 brass cannon; other property recovered, ₱1,870.90, money stolen from provincial treasurer on night of May 11, 1904. Constabulary casualties, none; arms lost by constabulary, none.

Conditions in this mountain province are very good. A large part of the back district of Abra having been transferred to the province of Lepanto-Bontoc, leaves the province more easily to be managed by the present force of constabulary.

The "Alzados" (local name for wild Igorrotes), as the mountain people of this province are called, are as a general rule very peaceable. However, at times they go on the warpath against the Tinguian people inhabiting the lower districts. In March, 1903, the constabulary became aware that a large force of armed Alzados were making for the lower country, and the senior inspector at once disposed of his force to afford protection to the inhabitants of the ranches of the Tinguianes and other people in the surrounding country. The Alzados on finding most of the ranches occupied by constabulary left without committing any depredations. They undoubtedly had intended levying tribute on the low-country people, as has been their habit of doing at intervals, carrying off stock, etc., in payment. These descents are not made often, however. They are generally instituted by the young men of the most remote hill tribes and are mostly to be feared during the spring months, at which time the young bucks seem to be more bellicose than at other times.

The court of first instance, in the month of September, sentenced one Valerio, an exinsurgent lieutenant, who was the main organizer of the band that robbed Santa Maria, Ilocos Sur, to eight years' imprisonment and a \$2,000 fine. Seventeen other men who were also

held for the crime above stated were turned loose on motion of the fiscal, although some of them confessed that they had belonged to the band. The above-mentioned men, in the month of May, were organized into a band by Lieutenant Valerio, who joined the outlaw Vister, and committed considerable depredation in Ilocos Sur, the most serious of which, however, was the attack and defeat of the police and looting of the tribunal of the town of Santa Maria, Ilocos Sur, after which they fled to the mountains of Abra, expecting to escape pursuit. The Tinguianes (or low-country people), however, being very friendly to the government and not desiring to have any turmoil in their province, brought about the capture of these men and surrendered them to Lieutenant Knoll, the senior inspector. They also brought in one cannon in good condition and one serviceable Krag rifle. The attitude of these people is very commendatory.

Twenty-five men from Abra, under Subinspector Ferrandez, were on detached service in Isabela during the Tomines campaign, and the constabulary of Abra also rendered able service blocking trails during the running down of the Vigan mutineers. The force was not tainted with insurrectionary ideas in connection with La Union and Ilocos Sur, as was at first thought might be possible.

The constabulary of this province is without a doubt the best-drilled and disciplined provincial force in the fourth district, due mostly to the untiring and very zealous efforts of First Lieut. Frank Knoll, who, on February 1, was granted leave to visit the United States in connection with the Igorrote exhibit. He was relieved as senior inspector by Capt. August O. Sorensen, who was also relieved on March 20 by Capt. Waldo B. Williams. It is desired that Lieut. Frank Knoll be returned to this province upon expiration of his leave, as he wields great influence with the Tinguianes and the wild hill tribes in the interior of Abra.

Locusts made their appearance to a more or less degree, but were rapidly exterminated by the people, who, as soon as they found a swarm of little hoppers that were as yet not old enough to fly, dug several deep pits nearby and inaugurated "drives." The little hoppers hopped and fell into these pits and, being too small to hop or fly out, were very easily exterminated.

The people of Abra, for the most part, are contented and hard workers. The most thrifty and prosperous appear to be the Tinguianes. They invariably have the best crops and stock, yet they are not taxed. It appears that they could be taxed to a certain extent and they undoubtedly can stand it better than the average Ilocano in this particular section.

Very good corn and tobacco crops were realized.

BENGUET.

Disposition of constabulary June 30, 1904.—Bagnio: Second Lieut. T. H. F. Diederich, senior inspector; Second Lieut. J. F. Egerton, supply officer; Subinspector C. Valdez; Third-class Telegraph Inspector G. L. Rickards; 28 men. Sablan, 8 men. Detached service, fourth district band, 2 men. Total, 2 stations, 4 officers, 38 enlisted men. Authorized enlisted strength, 50.

Expeditions and patrols, 1; miles covered, 140; engagements, none; outlaws killed, none; outlaws wounded, none; outlaws captured, none; arms and ammunition captured, none; other property recovered, none; constabulary casualties, none; arms lost by constabulary, none.

This is a very peaceful mountain province, inhabited mostly by Igorrotes. At present the province is prosperous.

On December 31 the senior inspector, First Lieut. Elmer B. Melton, shot and killed himself with a .38-caliber Colt's revolver at San Fernando, La Union. Despondency is attributed as the cause. His place was taken temporarily by First Lieut. Thomas Carl, who was relieved in March by Second Lieut. Theodore H. F. Diederich, and Lieut. John F. Egerton was also assigned to the province as supply officer, filling a long-felt want, as the senior inspector of this province had also been acting as supply officer.

During the year there were only two expeditions after badrones and marauders. The first expedition was during the time of Lieutenant Porter, and the second was in September, under command of Subinspector Valdez, who returned with five Igorrote prisoners, charged only, however, with stealing stock. They were tried and found guilty of theft and were sentenced to six months' imprisonment each. This has been the only band of cattle thieves that has been reported in this province. The peaceful people, however, are subject to attacks now and then from bands of head-hunters belonging to the hill tribes. In the early part of November a band of "Busoks" (local word for head-hunters) from the Asin Valley in Nueva Vizcaya made a descent on the settlement of Buguias, close to the Benguet boundary. Detachments of constabulary immediately left Baguias and Cervantes for the scene of the raid. The residents of that district, however, had armed themselves against these head-hunters and they had not been able to do much damage before being chased off, and immediately left the district upon the appearance of the constabulary and returned to their haunts in the hills. The Asin Valley is in Nueva Vizcaya and is the resort of a savage, lawless element.

CAGAYAN.

Disposition of constabulary June 30, 1904.—Tuguegarao: Capt. Henry Knauber, senior inspector; Second Lieut. H. N. Shobe; Third Lieut. Guy H. Greene; 58 men. Aparri: First Lieut. J. M. Van Hook, supply officer; First Lieut. W. T. Harris; First Lieut. Ernest R. Hazzard; 32 men. Detached service, Isabela, 22 men; fourth district band, 4 men. Total, 2 stations, 6 officers, 116 enlisted men. Authorized enlisted strength, 162.

Expeditions and patrols, 108; miles covered, 5,235; engagements, none; outlaws killed, none; outlaws wounded, none; outlaws captured, none; arms and ammunition captured, 2 shotguns, 1 revolver, 62 rounds assorted ammunition; other property recovered, 6 ponies, 1 carabao, 2 watches (value, \$50), jewelry (value, \$300); constabulary casualties, none; arms lost by constabulary, none.

Conditions in this province with reference to peace and law and order are good. The indications are favorable to more prosperous times. Their straitened circumstances are largely due to the great loss in 1902 of carabaos, cattle, and horses by pest, and by the more recent ravages by locusts in the corn crop during July, August, and September. Concerted effort was made to destroy the pest by all municipalities in the province on September 8 and 9, and great numbers of locusts were driven into pits and killed, since which time they have not been so noticeable, and the pest has apparently run its course, at least for the present. Owing to the great amount of uncultivated land in the Cagayan Valley, it is thought that it will be very difficult for some time to come to exterminate the locusts there. The tobacco crop was a very good one this year, owing to the heavy rains in October and November, which inundated all the lowlands, and thereby ensured a good yield of tobacco.

A large typhoon struck the valley on October 25, and was by far the most destructive storm for many years. Tuguegarao suffered more than any town in the province. All buildings were more or less damaged, and many good structures totally destroyed. All the buildings on the old military reservation which were in use by the constabulary were totally destroyed, and the constabulary were compelled to retire to the town again and get other quarters. A steel warehouse of the Tabacalera Company, which was made in England, was totally destroyed, which shows the strength of the storm. The Tabacalera Company lost over \$100,000. The loss of life and river shipping was severe. Sixteen cascoses, or barangays, were reported lost and 30 persons drowned.

The execution at Amulung, on October 30, of the four condemned men, Daniel Verzon, Nicolas Ancheta, Faustino Pascual, and Anaceto Javier, had a very unfortunate termination. The execution was by garrote, and the executioner was an American—apparently a novice—from Manila. The records show the execution of these men was carried out according to schedule from start to finish, the provincial doctor and the judge of the court of first instance signing certificates that the men were dead. Each man was in the machine about eight minutes. It is very evident that not enough force was applied by the executioner, for, although the bodies had been laid out, several hours afterwards three of the men, Daniel Verzon, Nicolas Ancheta, and Faustino Pascual, were found to be still alive. The provincial doctor was immediately notified by Captain Long, and everything possible was done for the men. They were taken to the homes of relatives, but the doctor pronounced them incurable, as they were almost totally paralyzed, and remain so to this day. The status of these men at present is very peculiar. Having been condemned and executed according to law and pronounced dead by the doctor, and certificates signed by the judge of the court of first instance, these men legally do not exist, yet they are actually still alive, although it is thought they will shortly die.

There has been for a long time in Cagayan a sort of an underground cattle-thieving organization, and not a few people numbered among the "principale" class (even including, in some instances, municipal officials) are suspected of having a hand in this nefarious business. These high-toned ladreses, who all have humble servants to do their bidding under cover of the night, have made away with cattle, carabaos, and horses to an alarming extent during the past. The stock simply disappears from one section only to reappear in another with a new brand, where it is purchased by buyers who are members of the association and resold again. This condition naturally has caused a degree of unrest and discontent among the masses, and has forced them at times into an attitude toward the present system of government which they should not feel, and which merely makes them more susceptible to the wishes of the "principale" class, as they fear the consequences of reporting the matter to the municipal officials, believing that the safer and better course is to let the matter drop and accept their loss, as the municipal officers themselves might be the ones committing the robbery. The present senior inspector is waging a vigorous campaign against these thieves, with considerable success, although it is very difficult to secure witnesses against the perpetrators even after they are caught. The recent sitting of the court of first instance at Tuguegarao has been a great help to conditions, as a large docket has been cleared up which was composed principally of horse and cattle thieves.

It is thought this favorite vocation of some of Cagayan's residents will shortly be completely broken up.

During the Tomines campaign in Isabela Captain Long and Lieutenant Hazzard, with 66 men, were on detached service in that province.

ILOCOS NORTE.

Disposition of constabulary June 30, 1904.—Laoag: Capt. B. L. Smith, senior inspector; First Lieut. J. C. Buttner; Third Lieut. O. C. Humphrey, supply officer, 70 men. Badoc: 6 men. Bangui: Third Lieut. E. DePeralta, 6 men. Dingras: 6 men. Detached service: Isabela, Second Lieut. James J. McLean, 39 men; fourth district band, 2 men. Absence with leave: Capt. H. J. Castles. Total, 4 stations, 6 officers, 129 enlisted men. Authorized enlisted strength, 156.

Expeditions and patrols, 86; miles covered, 8,250; engagements, none; outlaws killed, none; outlaws wounded, none; outlaws captured, 50. Arms and ammunition captured: 1 Krag, 1 Spanish rifle, 3 revolvers, 6 revolver cartridges; other property recovered, none; constabulary casualties, none; arms lost by constabulary, none.

This province is very quiet and peace reigns in all parts, although it is the home of Ricarte. It was reported in January that Ricarte had secretly entered the province and was at his home in Paoay. Investigation, however, proved this to be false.

The most serious disturbance during the year was the attempted organization of the new Katipunan association in and around the town of Paoay by a native of Tarlar, named Valentin Butardo. The existence of the society was disclosed by Gavino Omayang, lieutenant of the barrio of Pia, of the pueblo of Paoay, who, on the 6th of July, informed Corporal Quintos, in charge of the constabulary detachment at Badoc, that such a society was organizing in Paoay. Corporal Quintos left for Paoay at once with 8 men, arriving there about 2 p. m., and he, with his men, together with the municipal police of the town, arrested in all about 60 members of the new association that afternoon. The senior inspector arrived at Paoay the next morning, and from the 6th to the 25th of July 161 members of this society were arrested by the constabulary and police. Butardo, with a few of his most devoted followers, succeeded in escaping to the mountains, where they were pursued by a force of constabulary, while other detachments, with the municipal police, watched the different adjoining towns. Butardo, however, and his 5 companions, tired of living without food and being constantly pursued in the mountains, came in and surrendered at Paoay on the 15th. At that time only 2 other important men remained to be captured, and the capture of these 2 men was effected on the 25th. Among the papers captured were lists of the members of the society, bearing 176 names, signed in blood. All members of the society had a scar on the right arm just below the elbow, being a slight incision made half an inch long, probably with a knife, dagger, or other sharp instrument, from which blood was taken from each man with which to sign his name. In the investigation made by Judge Wislezenus, who was at Laoag at that time, it was clearly shown that most of these men had been forced into the organization through threats of death, most of them being of the lowest workingman or tao class. Of the 161, 107 were released by the judge, and the remaining 54 were held for trial to the court of first instance. These men were tried by a special session of the court, which began August 20, 1903, with the result that 17 were convicted, receiving from one to seven years' sentence each. The organization of this Katipunan Society was not of a menacing nature to the peace of the province, as it was organized among a very poor and ignorant class, and was more a scheme of Butardo and several of his companions to gain a livelihood than any other. Only 1 revolver, with no ammunition, was captured. Bolos were to have been made later by one of the members who was a blacksmith by trade, but no money had been advanced as yet by Butardo's treasurer for the purchase of iron from which to make them, and none was manufactured.

On September 30, 1903, Capt. W. G. Gatchell was relieved as senior inspector of this province by Capt. H. C. Castles, who was relieved on March 15, 1904, by First Lieut. J. C. Buttner, who was relieved on April 3, 1904, by Capt. William Green, who was relieved on April 10, 1904, by Capt. B. L. Smith, who is still in command of that province.

Several conflagrations occurred during the year in the province, but no serious damage was sustained. The prompt action of the constabulary detachment at Laoag probably saved that town from having a serious burning.

About the middle of December the newly arrived Roman Catholic bishop in charge of the diocese of Nueva Sigovia, of which this province is a part, the Reverend Doctor Daugherty, visited this province on an inspection tour. The churches in this province are all held by the Independent Filipino Church, excepting only the one in Laoag. Considerable feeling was shown against the Bishop in the different towns as he passed through, and a few stones were thrown at him in Laoag, one of which hit him, but resulted in no serious bodily injury. No serious disturbance occurred. The stones were thrown from behind a hedge

fence in Laoag while the bishop was out riding in the early evening. In view of the bishop's intended visit the constabulary officers were cautioned to prevent any personal violence against him, if possible, should any be attempted. No constabulary escort was asked for or given him, as has been reported as having been done. Lieutenant McLean, however, although not a Catholic personally, rode with him from Badoc to Laoag.

The people of this province are generally industrious and very peaceably inclined, although they may become fanatical over religion at times.

During the Tomines campaign in Isabela Lieutenants McLean and Helfert, with 55 men from this province, were on detached service in Isabela, where they rendered very excellent service. Although the campaign is over, they have been retained there until that province shall have quieted down to its normal state of tranquillity.

Although depleted in numbers, the constabulary of Ilocos Norte put on a bold front on hearing of the mutiny at Vigan, and are to be commended for the manner in which they did their duty, meriting the confidence shown them by their officers and the American population in general.

ILOCOS SUR.

Disposition of constabulary June 30, 1904.—Vigan: Capt. A. E. Hendryx, senior inspector; Second Lieut. J. McRae, supply officer; Third Lieut. C. H. Allen; Subinspector Dionicio Reyes; Third-class Telegraph Inspector C. M. Sides; 126 men. Detached service: Lepanto-Bontoc, Second Lieut. Harry E. Miller; Isabela, 1 man; fourth district band, 5 men. Total, 1 station, 6 officers, 132 enlisted men. Authorized enlisted strength, 163.

Expeditions and patrols, 68; miles covered, 800; engagements, none; outlaws killed, none; outlaws wounded, none; outlaws captured, 33; arms and ammunition captured, 1 Krag rifle and 966 Mauser shells; other property captured or recovered, none; constabulary casualties, none; arms lost by constabulary, none.

This province is very quiet and peaceful and apparently entirely recovered from the shock of the Vigan mutiny. The maguey and other crops appear to have been very good this year. Considerable new building is going on, especially in Vigan, where buildings upon which work was stopped during the insurrection in 1898-99 up to the present time are being completed and new ones erected. This is taken as a fairly good sign of prosperity and contentment.

A great many Tinguianes live back from the coast in the foothills of the Cordillera Real. They are very law-abiding and desirous of peace, but are very clannish and live in settlements of their own, where their magnificent cattle and other stock show their industry, as it does in other provinces of this district wherever they are found.

The town of Vigan is the representative town of the Ilocano country, but has no suitable port, most of the year boats being compelled to leave stores and supplies destined for the town and back district either at Salomague or San Esteban, both places about 20 miles distant, one north, the other south. Only in the best of weather can boats make a landing or discharge cargo at Pandan, which is the port of Vigan, situated only 2 miles distant. It is believed Pandan could be made a very good port without the outlay of an extraordinary amount of money by the insular government. With this done it would reduce expense of transportation for the people by thousands of dollars, both convenience and time, and would have a tendency to increase traffic and output of products from this province and the back province of Abra and other sections in this district.

A deplorable affair occurred in Cabugao on the 6th of September, resulting in the death of Lieut. C. W. Hutton, third lieutenant, Philippines Constabulary, formerly attached to the constabulary of Abra. Lieutenant Hutton was en route to Manila per Special Orders, No. 55, paragraph 2, headquarters Philippines Constabulary, and on his way through to Salomague to await transportation to Manila he stopped at Cabugao, as he had an old friend there named Wingo, the owner of a canteen. On the evening of the 6th, between 7 and 8 o'clock, a native was beating his mother, and Hutton and Wingo both went to the house to quiet the disturbance. Some police of the town also arrived shortly after, who did not recognize Hutton as an officer, and, mistaking his position and resenting his attempt at authority over them, one of them struck him on the head with a club from behind. Dr. Wm. H. W. Wilson and Dr. A. E. Anderson, from Camp Morrison, were summoned. They performed an operation on the crushed skull and did everything in their power to revive the unconscious officer, but without avail, and he died the next day in the hospital at Camp Morrison. Lieutenant Hutton left a wife at San Fernando, La Union, but no children. His estate was administered by the treasurer of the Philippine Islands, in conformance with Act 290 of the Commission. The policeman who struck the blow was tried and sentenced to three years' imprisonment and a fine of \$1,000.

The typhoon of October 25 destroyed a great many buildings in Vigan, and the military post at Salomague was almost totally destroyed.

The mutiny at Vigan, which occurred on the night of February 7, was a very serious affair while it lasted, but by the prompt action of the constabulary of adjoining provinces,

and the quick response of the acting chief of constabulary, Colonel Scott, who came up in person with reinforcements of scouts and constabulary from Manila, and the quick action of the honorable civil governor and the division commander in calling out additional scout companies and the American troops at San Fernando (which latter were commanded in person by Colonel Thomas, Eleventh Cavalry), the mutiny and whole affair was completely ended in only eleven days, with all the renegades captured except 3 and all arms recaptured except 4 carbines and 3 pistols.

The district chief had just returned from the Cagayan Valley and had only been three-fourths of an hour in Vigan when the affair started. Had there been 7 good serviceable guns available at the start there would have been a different result. As it was, the Americans were all scattered and unarmed. It is safe to say they will not be caught that way again, however. The first thing to do was to get arms. These did not arrive until the renegades had left town. Meantime all that was possible was done by the Americans, who got together as best they could with their pistols and a few old relics of guns. There were quite a number of American women and children in the town, families of officials, etc., which made the situation more grave. The coast-guard cutter *Negros* was at Pandan and she was dispatched to Salomague to seek assistance, Captain Roisser responding to the call with a promptness for which he deserves credit. The disappointment was indeed great when the commanding officer of Salomague, Lieutenant Neisser, of the scouts, sent word down that he would render no aid either with men or arms. Considerable might have been accomplished with even a small force of well-armed men at this time, and Lieutenant Neisser's action in refusing to send either men or arms was regretted. He was probably right technically, according to his orders and instructions, which it is hoped will be immediately changed in such manner as to prevent a recurrence of such a back-action and craven interpretation and for the general peace and welfare of the American Government in the Philippines, and that another American colony may never again be denied support and protection by United States troops. The constabulary officers in Vigan, being, as they were, in their unarmed condition that night, are to be commended for their behavior and the manner in which they preformed their duty in an extremely trying and desperate predicament, and all Americans are fortunate that the result was not more serious.

As all the wires had been cut to the southward by the renegades, the district chief dispatched the cutter *Negros* during the night to pick up the small detachments of constabulary at San Esteban and Candon, numbering 10 men, before the mutineers could reach those places, as it was impossible to give them warning. When this had been done and the detachments safe at Vigan, the following morning he left on the cutter for San Fernando to get in touch with Manila, notify other provinces to block trails, and to head the La Union constabulary to intercept the renegades, while Captain Hendryx was to pursue them from the northward with all the forces he could muster.

The prompt appearance of large bodies of troops of all branches of the service, both United States and insular, and the blocking of all mountain trails, had a very demoralizing effect upon the renegades, and they began to lose heart in their enterprise on finding that the people in the section of the country in which they found themselves were not in sympathy with them and would not help them. The result is well known. They began hiding their arms and presenting themselves by twos and threes in such a manner that would insure their not being shot by the scouts, constabulary, and soldiery. All honor is due Col. W. S. Scott for his efficient and successful management of the campaign.

An extract of Captain Hendryx's report of the affair from its inception is given below:

"In the latter part of December or the beginning of January of this year Artemio Ricarte, 'The Viper,' passed through Arayat, Pampanga, on his way to Nueva Ecija. While crossing the river by the ferry, Ricarte, it is alleged, gave the ferryman, named Calixto, a letter to be delivered to Nicolas Calvo, who was, during the insurrection, one of Ricarte's officers, but then a second-class private in the constabulary of Ilocos Sur, on detached service in Arayat. This letter, while its contents are not absolutely known, it is to be presumed, so far as information can be obtained, appealed to Calvo in a manner best suited to serve the purpose of the 'Viper.' Calvo, it seems, showed this letter to Carlos Ayala, who was a corporal in the same detachment, and had been sent to Pampanga Province in charge. The letter, it seems, appealed to Ayala, with the result that the question of revolting was seriously discussed by them while stationed at Arayat, and with one or two other companions, but the futility of accomplishing anything was recognized, notwithstanding Ayala's desire to revolt then and there. Consequently the matter was deferred until they could return to Ilocos Sur.

"About this time rumors reached the senior inspector of Pampanga, so he says, of things not being quite right among the members of this detachment, but on account of the good work that many of them had done in the past he was loath to believe any change against their loyalty.

"Shortly after their return to Vigan, on January 26, either Calvo or Ayala, or both, proceeded to work among their comrades in whom they had confidence, both with the civilians

and members of the constabulary. As to which took the initiative I have been unable to determine, each accusing the other, and neither admitting that they were willing or really wished to revolt until practically the last moment. However, by plausible explanations, the following members of the constabulary were obtained to further the mutiny: Carlos Ayala, Teodoro Edralin, Macario Agapay, Domingo Rallojay, Nicolas Calvo, Paulo Peralta, Doroteo Ayson and Leon Almariz. It is to be presumed that the above 8 circulated among their civilian friends so that there were practically 8 groups, with the result that two days previous to the revolt it was decided to avail themselves when an opportunity presented, and on February 7 two of the above named conspirators, Leon Almariz and Paulo Peralta, were on guard, one on duty at the cuartel and Peralta acting corporal at the prison.

"Calvo, it appeared, went out late in the afternoon or about supper time, it is to be assumed, to meet certain civilians who were to take part in the revolt. Suffice to say that he returned to the cuartel about 7 o'clock, when Leon Almariz was on guard, with one party of 8 civilians from Bantay, a barrio of Vigan. These civilians Almariz, the sentinel, permitted to enter the cuartel, notwithstanding the fact that they were armed with bolos and puñales, and at a time when there were but few soldiers in the cuartel, with the result that the mutineers had but little difficulty, with the cooperation of the renegade soldiers, in securing possession of the arms, Almariz, the sentry, continuing to remain at his post, but directing his attention to the action of the renegades and civilians in seeing that their purpose was accomplished. All being to his satisfaction, several shots were fired in the air, evidently as a signal, as shortly afterwards many more civilians entered the cuartel under command of Formentes, an ex-sergeant of the constabulary, estimated to be about 20. Possession of the commissary was then taken and the bandits proceeded to equip themselves with the necessary clothing. Simultaneously the work of liberating the prisoners was accomplished by 3 men, Doroteo Ayson, Domingo Rallojay, and the acting corporal of the guard, Paulo Bernalta. Meanwhile they fired a volley up and down the streets leading from the barracks, and a running fire seemed to have been kept up by many of these renegades, who seemed to have been drunk with their success of the evening, and small detachments sent out to different localities gathered up many soldiers, who were attracted by the shooting, and, as a natural consequence, hastened in the direction of the cuartel with a view of reporting for duty. These were either voluntarily or by intimidation taken into the ranks of the revolvers and, for the evening at least, appeared to enter into the spirit of the mutiny. Other detachments hunted up civilian friends or soldiers whom they believed were in sympathy with the movement, with the result that the sentry on guard at fourth district headquarters was gathered in; also the revolvers taken from the 3 native linemen and 2 taken from 2 soldiers of Abra who were then in town and were forced to accompany the renegades toward the cuartel, but fortunately were enabled to make their escape through the fear that suddenly overcame this particular detachment on hearing the voice of an American. One of the arguments that appears to have been advanced was that the situation was entirely in the hands of the revolvers, and that all the officers were killed and the uprising was general. At least that is what many of them testified to in court. Notwithstanding that there was considerable shooting throughout the entire evening, strange to say, only 1 man was hit, and he a member of the constabulary, who was killed by his comrades. The house above the commissary during this revolt was occupied by an American and his wife and the wife and child of the division superintendent of schools, the latter being away on an inspection tour. Fortunately the revolvers did not attempt to molest them. Only one ball went into the house, and that seemingly fired for the purpose of extinguishing the street light which was secured in the corner of the house. It is reported that the house of the telegraph officer, Lieutenant Sides, was fired into by small detachments, but whose operations ceased through the resistance offered them by a liberal use of a Winchester rifle in the hands of Lieutenant Sides. My house was also fired into and means taken to decoy me outside by a detachment of renegades sent there for that purpose, but, as I was at that time in the house of Major Garwood, where I had gone to pay my respects, this being the night he returned from the north, their attempt failed.

"Lieutenant McRae, in going to the cuartel, was the first man fired upon. Recognizing the condition of affairs, he hastened to the house of Major Garwood and reported the revolt among the constabulary to the Major and myself. It was decided that as we were not armed, there being only some old relics in the Major's house, Lieutenant McRae should proceed at once to Pandan, he being mounted, and secure the guns in the possession of the 4 constabulary guards sent there to guard prisoners who were loading the exposition collection for Ilocos Sur and guard supplies, and secure such other guns and assistance as might present itself from the coast-guard boat then at Pandan. There were, I believe, a shotgun and 1 revolver aboard the boat. Lieutenant McRae, securing the guns from the guards, placed the prisoners aboard the boat, turned the guns over to 4 passengers, Lieutenants Knoll and Abra, Messrs. Allyn and Wells, of the quartermaster's department, and Mr. White, civilian operator, who had been relieved from duty at Laong, and Captain Manchester, and ordered the captain of the coast-guard boat, by direction of Major Garwood, to proceed to Salomague and secure such guns and assistance as the company of scouts stationed there could give,

afterwards walking from Pandan to Vigan, and reporting for duty upon arrival to Major Garwood. On account of the various delays experienced by Lieutenant McRae in getting away at Pandan, and making a long trip from the landing in Pandan to the coast-guard boat and return, his party did not reach Vigan until after the renegades had left the town. When the firing had commenced I called the attention of the Major to shots, at first two or three in number, but he discredited it with the explanation that it was the muchacho rolling around some boxes below. Later on, however, the firing was confirmed by the appearance of Lieutenant McRae. Lieutenant Greene stated that he met the provincial fiscal, who, being very much excited, stated that a woman who had just come from the direction of the cuartel had stated that the soldiers and municipal police were fighting. This, with the firing we had heard convinced him that the affair was serious.

"He hastened to his quarters and secured his carbine and, in company with Mr. Darling, a civilian stenographer at fourth district headquarters, went to the office, where he relieved the guard stationed there, except the sentinel, who continued on post until taken up by the detachment revolvers. Lieutenant Greene, taking with him 3 guards, 2 of them armed with carbines, 1 of them unserviceable, proceeded in the direction of the cuartel, where their presence was resisted by a heavy fire on the part of the revolvers, so much so that they sought shelter for the time being in the presidencia, where they met the late Lieutenant Arthur, who was unarmed, except with a pistol. In company with the acting first sergeant of the constabulary of this province, Lieutenant Arthur had been grazed on the arm by a bullet. No shots were fired by Lieutenant Greene, so he says, as at the time he did not know the state of affairs, he thinking that Lieutenant McRae was at the cuartel. Meanwhile the guards who had accompanied Lieutenant Greene remained in the presidencia and refused to give up their arms to strangers. Several attempts were made by officers to enter the cuartel without success. Upon seeing the impossibility of entering the cuartel, Lieutenant Greene, Mr. Darling and Mr. Harn, chief clerk of fourth district headquarters, who was picked up at the presidencia, went to the house of Major Garwood to report the affair and to place themselves under the orders of the Major.

"Meanwhile the Americans were concentrating in the house of Major Garwood and that of the provincial treasurer. About this time Lieutenant McRae and his party reported to the Major from Pandan with the arms, and the latter, with a detachment, went immediately to the barracks, expecting to find the renegades still looting. They had accomplished what they had evidently intended to, however, and had left town. Steps were then taken to have all the Americans go to the house of the Major, lest the revolvers return to the town before morning for more sack and plunder, and an examination, as far as possible, of what had been done was made. They found in the commissary that the safe had been broken open and moneys taken therefrom amounting to P 864.16; commissaries largely in "dulces" to the value of P 205.88, and clothing amounting to P 1,069.72, or a total of P 2,139.76. At the cuartel they found everything in great disorder and nearly everything destroyed, but discovered that the renegades had overlooked or had purposely left about 8 police shotguns, which were mostly unserviceable, and also considerable ammunition. Also, in the corral they found 2 carbines which the guard at that place had evidently tried to conceal, the carbines being found under a structure of bamboo. All of the above was taken to the house of Major Garwood. At about 4 a. m. 'assembly' was sounded throughout the town in order to get together all the soldiers that had stayed behind. Many reported and each patrol brought in some. These the Major ordered armed with the carbines and shotguns that had been left behind. It was then daylight and the major ordered that they proceed to the cuartel, post guard, and carry out the usual routine duties.

"In the morning the coast-guard cutter having returned from Salomague, the captain reported that the commanding officer of scouts, Lieutenant Neisser, refused to assist in any manner without orders from division headquarters; that he would not come himself or send any arms. Major Garwood then directed that the cutter go down and pick up the 5 men stationed at San Esteban, also the 5 men at Candon, and bring them to Vigan. The Major then went aboard and left for San Fernando, La Union, to secure the constabulary of that province to intercept the renegades on their way south. Next day I succeeded in gathering 25 Americans, who were mounted upon available horses of this post, and proceeded at once on the trail of the renegades, leaving here very late in the afternoon and riding nearly all night, arriving at Santa, where we established a telegraph office, Inspector Manchester in charge.

"Meanwhile the renegades, having spent their force around the cuartel and vicinity, used such prisoners as were not armed as cargadores, taking with them ammunition and commissary stores; going south they rested in one of the barrios of Santa. Here a number of the renegades, having cooled off some of the excitement which controlled them around the cuartel, managed to escape and return to Vigan. Early next morning the revolvers went to Narvacan, where they practically made the treasurer give up all the money he had, which was 28 pesos, the same being distributed among the renegades, some of them receiving 50 cents. Here the revolvers rested and breakfasted. After taking a horse from the ex-presidente of the town for Carlos Ayala, they traveled south to Santa Maria, where they went to the presi-

dencia and secured about 200 pesos from the treasurer of the town, giving 4 or 5 pesos each to the different renegades, according to their grade, and made presents of clothing and commissary sweetmeats to the citizens. From there they continued their march south to San Esteban, where the house of Joel Snell, the American school-teacher, was entered and 1 Parker double-barreled shotgun, a target rifle, certain moneys, checks, jewelry, clothes and sharpshooter's medal were stolen by the bandits. From here they went to Santiago, where they stole about 350 pesos from the municipal treasurer, distributing it in amounts of 5, 8, and 10 pesos to the different soldiers, according to rank, and succeeded in getting their pictures taken, a copy of which is herewith inclosed with the names of such members of the band as can be recognized. The presidente provided these bandits with dinner or supper, and here they rested for the night, the jefes in the presidencia and the soldiers and subordinate officers in the convent. On the succeeding morning, after breakfast, the band left, skirting the eastern barrios of Candon, resting at Abaya for dinner, and from there marching on to one of the outlying barrios of Santa Lucia. The bandits now began to be more cautious and to realize that they were being pursued and cut off. In consequence they split up in three divisions, Ayala and Agapay going in the direction of Santa Cruz, and the others, after wandering around, gradually began to separate and discard the uniform for that of the 'paisano' that they might present themselves with the least possible danger. With each succeeding hour the trails of these renegades increased and the question of food became an important factor in bringing them to a realization of their acts, their condition resulting in a speedy settlement of the revolt.

"Four troops of the Eleventh Cavalry, from San Fernando, under command of Colonel Thomas, the First, Twelfth, and Fifteenth Companies of the Philippine Scouts, and a detachment of constabulary from the headquarters troop took the field against the bandits. This demonstration, together with finding all trails cut off leading to the mountains, demoralized the revolters and, I believe, will have a lasting influence on the people of this section.

"Carlos Ayala, Macario Agapay, and 7 civilians with 8 guns were the first to be recovered, they presenting themselves to the presidente of Santa Lucia. From this time on the rest, with the exception of 3 soldiers, were either captured or surrendered. As fast as they came in they were sent to Vigan for confinement and trial.

"The following week after this affair everything settled back into its natural way. At present the province is perfectly quiet."

The following are the sentences awarded by the court of first instance at Vigan in the mutiny cases: Death—Corporal Carlos Ayala, Second-Class Private Macario Agapay, Second-Class Private Nicolas Calvo. Forty years and fine of ₱10,000—Second-Class Private Ancelmo Ygarta, Second-Class Private Pablo Silvestre, Second-Class Private Maximiano Manganaan, Second-Class Private Santiago Asuncion, Second-Class Private Bruno Propio, Second-Class Private Modesto Polido, Second-Class Private Teodoro Edralin, Second-Class Private Cenón Lazo, Second-Class Private Antonio Guerzon, Second-Class Private Benito Paez, Second-Class Private Doroteo Ayson, Second-Class Private Mariano Vallehermosa.

Major Mair, with a detachment from headquarters troop and Pampanga constabulary, was sent up as a safeguard against possible trouble during the trial and sending of the sentenced men to Manila, which, however, was accomplished without incident.

In connection with the trial and conviction of these renegades, special mention is due Mr. Vicente Singson, the efficient fiscal of this province, whose interest and energy in the prosecution of these cases was very marked.

ISABELA.

Disposition of constabulary June 30, 1904.—Ilagan: Capt. Theo. I. Owens, senior inspector, Second Lieut. Edw. Collins, supply officer; Second Lieut. H. R. Talbott, medical officer; Third Lieut. G. A. Helfert, 59 men. Echague: Second Lieut. Joseph Delaney, Second Lieut. James Treadway, Subinspector Domingo Danuey, 67 men. Detached service: Fourth district band, 3 men; from Abra, Subinspector Guillermo Ferrendez; from Cagayan, 22 men; from Ilocos Norte, Second Lieut. Jas. J. McLean, 39 men; from Ilocos Sur, 1 man. Total, 2 stations, 9 officers, 191 enlisted men. Authorized strength, 162.

Expeditions and patrols, 166; miles covered, 9,737; engagements, 3; outlaws killed, 16; outlaws wounded, none; outlaws captured, 3; arms and ammunition captured, 32 rifles, 5 revolvers, 112 rounds rifle ammunition; other property recovered, 15 horses, 4 carabaos, large amount of quartermaster supplies lost by scouts; constabulary casualties, 1; arms lost by constabulary, 1 Springfield rifle.

This province is rapidly assuming its normal state of affairs, after having been through the turmoil of almost a general insurrection brought about by an ex-officer in the insurgent army, named Manuel Tomines.

It had been known for some time that a small band of bandits had crossed over into Isabela from Nueva Vizcaya, and as no headway had been made against them, and reports were meagerly sent in, First Lieut. William Greene was sent up to take charge of Isabela,

which he did on December 19. He immediately reported that there were several large bands of bandits well armed and ammunitioned operating in southern Isabela, where they were apparently aided by all the people and were growing in numbers and power, the chief being the aforementioned Manuel Tomines, who styled himself a colonel, and having as his second in command an American deserter from the Sixteenth Infantry, named Maurice Sibley; that they had between 30 and 40 guns, mostly Krag-Jorgensens and Mausers. This report was followed by a request for some officers and men to be sent to aid him, as he deemed his force too inadequate and inexperienced to cope with this bandit force, which was growing daily.

The district chief immediately took steps to comply with this request, and taking the field in person, arrived in Isabela on January 10 with 7 officers and 173 enlisted men from the provinces of Abra, Ilocos Norte, Ilocos Sur, and Cagayan. Prior to the arrival of these men, however, on the night of January 2 Tomines himself began the campaign by attacking the town of Naguilian. His prime object apparently was to kill the justice of the peace, Señor Vicente Cauila, who had fearlessly prosecuted captured members of his band and had been instrumental in the capture of 2 rifles. Tomines had two brothers and quite a number of other relatives and connections in Naguilian, who were continually secretly aiding him, although one of his brothers, Silvestre Tomines, was in fact the municipal secretary of the town. It is on record that they all aided Tomines's forces in getting into the town on the night of the attack. One barrio, called Tomines, and composed of relatives mostly of the Tomines family, joined the bandit's forces in a body and entered Naguilian. The forces altogether numbered about 200 men. There were between 30 and 40 guns in the band. The rest were armed with bolos.

There was a small detachment of constabulary in the town under command of an acting corporal, and the attack was directed simultaneously against them and the house of the justice of the peace, who was absent. The small constabulary forces taken by surprise, retreated across the river to the west of the town, losing 1 soldier killed in the town. The bandits, not finding the justice of the peace at home, ruthlessly murdered his wife, riddled his house with bullets, beat one of his brothers nearly to death, and carried off two women servants.

The constabulary found the justice of the peace on the other side of the river in the town of Gamu, and on the following morning they returned to Naguilian. Upon arriving, the justice of the peace went direct to his house to ascertain what the bandits had done, and some of the soldiers, about 5, went to the tribunal with the acting corporal to disarm the municipal police, whom they had reason to believe aided in the fight against them the night before. The brothers of Tomines, with some other people, were in the tribunal evidently having a ratification and taking stock when the corporal arrived and stated he had come to disarm the police, etc. Silvestre Tomines became very abusive immediately and threatened the corporal, who started to go up into the tribunal, whereupon Silvestre grabbed a police shotgun from the rack and fired point-blank at the corporal, who avoided the shot, however. Several constabulary with the corporal fired about this time at Silvestre and several others who had grabbed arms and run to his assistance, and a general fusillade began. Silvestre Tomines, together with Alejandro Tomines, a cousin of Manuel, the bandit, Francisco Acosta, brother to wife of Tomines, Benito Acosta, also cousin, and Espiridon Landay, lieutenant of the barrio of Tomines, had come into the town en masse with the bandits the night before. The vice-president, Romualdo Romena, was in the tribunal, but stated that when he saw Silvestre Tomines fire through the door at the corporal and the general shooting began, he jumped out of the window. He was implicated himself, but turned state's evidence and stated that Tomines's brothers and other relatives in the town had aided him in every way possible. Several other eyewitnesses of the affair the night before also testified that they had seen Silvestre Tomines, his cousin, and also Francisco Acosta, in company with the bandits on the night with guns in their hands and stated the kinds of guns they had. One municipal policeman also made the same statement.

It was undoubtedly a good thing for the province of Isabela and the whole Cagayan Valley that these men brought about their own killing as they did, for they were all notoriously bad, were against the government and doing everything in their power to aid the Tomines insurrection both openly and underhanded.

The attempt was made by an unscrupulous American lawyer and his retainers, mostly Ilocanos interested in land questions and other deals with the native Cagayanes and Tabacalera Company, to show that this was simply a tribal war, but nothing could have been farther from it as there were Cagayanes and Ilocanos on both sides, although the justice of the peace is a Cagayan while the Tomines clan are Ilocanos. I might here state the grandfather of Cauila (the justice of the peace of Naguilian) brought the grandfather of the Tomines tribe from Ilocos Norte in peonage with several other Ilocano families and placed them on ground, gave them implements and cattle with which to till their ground, and gave them such consideration that in the course of several years he was independent himself. It must be said that the Ilocanos are hard workers and this family grew and prospered. Some question arose after the death of the old man, however, which created

bad blood between the families of Cauilan and Tomines, which has existed until to-day, and as each family has a strong following, makes the matter to be considered. However, the Cauilans have shown themselves to be with the government and the other element undoubtedly have not been; but as there are Cagayanes and Ilocanos in both factions, the tribal war question must be left entirely out. Neither were politics nor town elections the cause of the trouble as had been asserted.

Prominent Cagayanes and Ilocanos were early found to be badly mixed up in the movement in the south of the province, as well as some Spaniards employed by the Tabacalera Company, and early in January some 45 persons were arrested by Lieutenant Greene. This number included the following "principales" and influential men in the province: Ambrosio Logan, Marcos Baccay, Ignacio Flores, Victorino Cruz, Bernardo Billamil, Santiago San José, and Manuel San José. The 3 Spaniards arrested were Francisco Balbas, Francisco Martinez and Teodoro Galvis, all agents of the Tabacalera Company. The above were all convicted of aiding and abetting the ladrones before the court of first instance except Teodoro Galvis, who was acquitted. The Tabacalera Company was not, as a company, found to be mixed up in the affair.

Inspector of Fiscals James Ross came up from Manila the latter part of January to make investigations and aid in the prosecutions, and was untiring in his efforts. His services were very valuable in putting down the trouble.

The campaign dragged along until March without much result. A great many captures and arrests were made during this time, and it appeared as if the provincial jail would not hold all the prisoners. Meanwhile the Vigan mutiny affair came off, and the district chief, who had gone down to attend to some official business there, became mixed up in it and stayed and aided in winding it up, which, however, took only eleven days. He immediately returned to Isabela, where things had lagged somewhat, and took vigorous hold of affairs there, with the result that by March 30 the "Isabela insurrection," as it had been called, was also completely wound up, terminating virtually with the capture of the bandit chief, Manuel Tomines himself, which was accomplished on the night of March 27.

The bandits had been pressed very hard and Tomines and Sibley had separated, the former taking most of the rifles with him. His band was hit several times very hard and his men had begun to leave him and surrender. Several were captured with their arms while in the barrios endeavoring to get food.

On March 21 Sergeant Botol, with a mixed detachment of Abra and Isabela constabulary, struck Tomines in the barrios of Mallid, jurisdiction of Cagayan, and after a short fight routed the whole band, capturing 2 Krag-Jørgensen rifles, 3 Mauser rifles, and 1 Remington rifle, 3 Krag belts, 1 constabulary belt, and 588 rounds of ammunition, together with 2 boxes of clothing. Sergeant Botol is of the Isabela constabulary, and the above is mentioned because it had been reported to Manila at the time when someone wanted scouts sent up to Ilagan that the Isabela constabulary force worked harder, more cheerfully, and showed more loyalty in Isabela than the constabulary of that province. Too much credence should never be given to the remarks or recommendations of inexperienced persons.

On the night of March 27 Tomines himself was captured, while making a visit to his brother's house in Naguilian to get food and clothes. The capture was effected by Lieutenants McLean and Collins, with Subinspector Ferrandez and 2 enlisted men. Notice was received late at night and the above went immediately to the house and surrounded it. Lieutenant McLean entered the house by the back door and Collins by the front, while Ferrandez and the 2 men stood on guard outside. Tomines was found sitting on the edge of a bed with his revolver in his hand, but was apparently dozing. McLean jumped across the room and wrenched away his revolver before he could fire. The two rolled to the floor together, and McLean probably choked the bandit longer than he should. The first words he used, however, after McLean's pressure had been removed was to mention the name of the Savior in English. This was about all they could get out of him that night and he continued repeating it. He afterwards stated that he had been taught that expression by the deserter Sibley, and also told them the next day where he had hidden 13 rifles when his band had broken up. He does not deserve the credit for this information, however, as one of the men captured with him gave the information before him. The 13 rifles were secured the next day by McLean and Ferrandez. They were 7 Krag-Jørgensens, 3 Mausers, 2 Remingtons, and 1 Springfield, the latter having been captured by them in the fight at Naguilian.

The total arms captured during the campaign were 11 Krag-Jørgensen rifles, 10 Mauser rifles, 6 Remington rifles, 1 Springfield carbine—a total of 28 rifles. Three revolvers were also captured and 1 presented. Tomines's entire band was captured or killed, except 5 men who are now with Sibley. Tomines has been sentenced to death and is now in Bilibid with most of his followers and supporters.

Sibley, with 5 men, is now back in the mountains from Dumabato and has taken with him all the people from the Ilongote rancherias or towns of Dumabato, Mangrad, Tamsi, Panipagan, and Cagadangan. These people are the ones who sheltered and protected him and the guns he has guarded since the insurrection. He is married into their tribe and wields

a strong influence over them. When Tomines was captured he went back to them and the headmen and inhabitants have all gone back into the mountains with him. It is believed unwise to adopt stringent measures against this whole tribe except as a last resort.

Captain Long has taken 6 or 8 ex-commissioners for Igorrotes under the Spanish government, and friends of the people of long standing, back into the mountains in an endeavor to confer with Chiefs Consul and Unmen in order to explain to them the necessity of returning to their homes and surrendering to the authorities this enemy of the government. The fourth district chief has studied Igorrotes considerably, and at times drastic measures of necessity have to be used against them. In case this mission fails by conference and presents to bring about the capture of this man, his influence will grow and extend into the Vizcaya Igorrotes, who are bad enough already.

Tomines made a very complete statement to the district chief after his capture. This statement is believed to be true in most respects and some extracts are given below. The whole statement can not be given in this report. Suffice it to say that he went to Manila in January, 1903, where he met the revolutionary "ring," who primed him up in proper manner for the part he was to play in Isabela.

"He came back to Isabela in May on the *Bunuan*, and in about four weeks or a little more after his return Fidel Lipa and Isidro Justo came up from Manila via Nueva Vizcaya. They met in a house or camarín belonging to Lucio Valensuela, near Maraurai. Ambrosio Logan and Maurizio Sibley were called. These men, when they found Tomines, told him they had come from the persons with whom he had conferred in Manila; that he did not wish to commit himself in any way before they had demonstrated who they were, so he asked, 'Who?' and they answered '———.' Then they showed him a paper authorizing them to organize forces; that this paper was signed 'A Ricarte, general-in-chief.' He saw the letter and signature and studied it well. The papers stated that they should go to Ilocos Norte, Ilocos Sur, Union, and other parts and organize for the new revolution. Operations were to begin in January, 1904. That Lipa, after signing his name, placed below it the symbolic word 'laurel,' and that Justo added the word 'canela' (name of flowers). That at the meeting near Maraurai he, Tomines, was elected to be chief of the Cagayan Valley, with the rank of colonel, and Sibley third, with the rank of major. Ignacio Flores was made commissary, with the rank of lieutenant-colonel. After the meeting the two emissaries left. He does not know whether they went to Aparri or south. That Logan afterwards gave him his star as colonel. That he and Sibley went from Maraurai to Quinalabac and from there to Bacabac, a rancheria of Ilongotes near Naguilian, and kept between these places until the last of October, when they came down the river further to ascertain the attitude of the people better. His guns were arms that had been retained out and hidden by Col. Raymundo Jeciel when he presented himself to Major Allen, of the Sixteenth Infantry, at Echague. These guns were guarded by Sibley, up about Dumabato. Sibley had been an officer with Jeciel. They were mostly Krag and Mausers. Some had been captured in the valley and others had been brought in from other provinces, some from Nueva Vizcaya and others from Ilocos Norte and Ilocos Sur.

"That in conformance with his instructions he began operations on January 3, 1904, by attacking the constabulary garrison at Naguilian. That he thought he would have only the constabulary of Isabela to deal with, but they were brought in from other provinces, and he was chased so that his men began to desert him and others were captured, and after Sibley left southward he was compelled to bury some of his arms. That on the night of March 27 he went to his father's house to get some clothes to wear and something to eat and was captured."

No further trouble will occur in Isabela for some time to come, as the province has been taught a very severe lesson. Governor Dichoso, who is a native Cagayan, was very loyal and tireless in his efforts to aid the district chief, riding with the latter night after night over the province between the different towns, haranguing them and using his utmost endeavor to get them in line. Some of the towns were badly affected, and considerable credit is due Governor Dichoso, who is very loyal and not the weakling that some would paint him. It was lamented that he was relieved so soon after success had been secured, largely through his tireless aid.

The new governor of Isabela, George Curry, has taken hold and will undoubtedly make a good governor. Too much attention can not be paid to the wild tribes and people of Isabela, who number thousands and have been almost totally neglected since American occupation. In this connection attention is respectfully invited to their government.

LA UNION.

Disposition of constabulary June 30, 1904.—San Fernando: Capt. E. R. Higgins, senior inspector; Third Lieut. R. A. Duckworth-Ford, supply officer; 57 men. Bangar: Subinspector Angel Bernal, 12 men. Rabon: Third Lieut. Jeremiah Sullivan, 16 men. Naguilian: 15 men. Total, 4 stations, 4 officers, 100 enlisted men. Authorized strength, 100.

Expeditions and patrols, 1; miles covered, 200; engagements, none; outlaws killed, none; outlaws wounded, none; outlaws captured, none; arms and ammunition captured, none; other property captured or recovered, none; constabulary casualties, none; arms lost by constabulary, none.

The condition of this province is peaceful. No influence from the late trouble in Ilocos Sur has manifested itself here. Smallpox has been prevalent in some sections to a considerable extent. Small fires have been reported in several of the towns of the province, but nothing of an incendiary nature. The municipal police of the province, under the control and supervision of the constabulary, are rendering very excellent service as policemen in the different towns. Municipal ordinances are being enforced and the people in general have more confidence in the protection afforded. Some of the presidentes, however, long accustomed to use the police as servants and private messengers, are slow to being accustomed to the new police system. This was painfully evidenced in a deplorable shooting and killing of the presidente of the town of Santo Tomas, Señor Luis Basco, by a corporal of the municipal police of that town on July 28. On that date Corporal Juan Alisance, of the municipal police, was on duty at the police quarters as corporal of the guard. The police quarters are situated directly under the town tribunal. The presidente sent his muchacho below to the corporal asking for a policeman to go on an errand. The corporal told the muchacho to inform the presidente that if he desired a policeman he must send a note in writing to that effect. Shortly after, the presidente's boy returned with the same request verbally. The corporal this time informed the boy that he was but the corporal of the guard and had no authority to send a policeman without an order from his superior or a written request from the presidente, which he might show his chief as authority for sending the policeman. When the presidente was so informed he came down stairs himself in a rage and demanded the policeman from the corporal immediately. The corporal repeated what he had already told the muchacho, whereupon the presidente began beating the corporal with an umbrella and struck him across the face. The corporal, upon being thus attacked, drew his pistol and shot the presidente, killing him almost instantly. These are the facts attested to by the corporal, the sentry, and two other policemen who were on duty at the quarters at the time.

The corporal undoubtedly acted very hastily. At any rate, he could easily have avoided shooting the presidente, as it was not absolutely necessary in self-defense. The corporal was tried by the court of first instance, and as evidence was produced by the presidente's friends that the corporal had previously threatened his life, he was convicted and sentenced to fifteen years' imprisonment. The case has been appealed, as no confidence whatever was placed by the constabulary authorities of the province in the testimony given by the presidente's witnesses, and it is believed their testimony will prove false. It is further believed that a decision against the action of one of the municipal police at this time, who, in line of duty, perhaps too hastily exposes himself, would undo a great deal of the work we are endeavoring to build up in elevating the character and independence of the poorer class against the corroded influence of the other "principale" class.

The crops in the province of La Union have been excellent during the year. The rice crop recently harvested is the largest the people have known for years. The untiring efforts of the people to exterminate locusts prevented that pest from doing much damage. The storm of October 25 destroyed quite a number of buildings in the province, but did not damage the crops much. The province is badly in need of bridges on the main road along the coast leading north from San Fernando, hardly any of which are passable at present. The new governor, Señor Joaquin Luna, was inaugurated on March 7, and the recent municipal elections are thought to have resulted most admirably for the future of the province. The presidentes are all of the better class of Filipinos, being young and energetic, and a great many speak English. Much activity on their part for the good of the province is looked for.

LEPANTO-BONTOC.

Disposition of constabulary, June 30, 1904.—Cervantes: Capt. C. E. Nathorst, senior inspector; Third Lieut. D. R. Wilcox, supply officer, 31 men. Bontoc: Subinspector Santiago Robles, 32 men. Lubuagan: Second Lieut. Harry E. Miller, 25 men. Alilem: Third Lieut. Arthur J. Irwin, 12 men. San Emilio: 8 men. Concepcion: 8 men. Quinali: 5 men. Detached service: Fourth district band, 5 men; from Ilocos Sur, Second Lieut. Harry E. Miller. Total, 7 stations, 5 officers, 126 enlisted men. Authorized strength, 165.

Expeditions and patrols, 22; miles covered, 1,672; engagements, 3; outlaws killed, 1; outlaws wounded, unknown; outlaws captured, none. Arms and ammunition captured, 1 shotgun, 1 Spanish rifle, 30 rounds Krag. Other property recovered, 5 carabaos, 3 ponies, 1 cow. Constabulary casualties, 1 killed, 1 wounded. Arms lost by constabulary, none.

Conditions in this interior mountain province are very good. The inhabitants are nearly all Igorrotes, with a sprinkling of Ilocanos. The greatest difficulty encountered by the constabulary of this province is in transportation of their supplies to and from the coast.

a strong influence over them. When Tomines was captured he went back to them and the headmen and inhabitants have all gone back into the mountains with him. It is believed unwise to adopt stringent measures against this whole tribe except as a last resort.

Captain Long has taken 6 or 8 ex-commissioners for Igorrotes under the Spanish government, and friends of the people of long standing, back into the mountains in an endeavor to confer with Chiefs Consul and Unmen in order to explain to them the necessity of returning to their homes and surrendering to the authorities this enemy of the government. The fourth district chief has studied Igorrotes considerably, and at times drastic measures of necessity have to be used against them. In case this mission fails by conference and presents to bring about the capture of this man, his influence will grow and extend into the Vizcaya Igorrotes, who are bad enough already.

Tomines made a very complete statement to the district chief after his capture. This statement is believed to be true in most respects and some extracts are given below. The whole statement can not be given in this report. Suffice it to say that he went to Manila in January, 1903, where he met the revolutionary "ring," who primed him up in proper manner for the part he was to play in Isabela.

"He came back to Isabela in May on the *Bunuan*, and in about four weeks or a little more after his return Fidel Lipa and Isidro Justo came up from Manila via Nueva Vizcaya. They met in a house or camarín belonging to Lucio Valensuela, near Marauraiui. Ambrosio Logan and Maurizio Sibley were called. These men, when they found Tomines, told him they had come from the persons with whom he had conferred in Manila; that he did not wish to commit himself in any way before they had demonstrated who they were, so he asked, 'Who?' and they answered '——.' Then they showed him a paper authorizing them to organize forces; that this paper was signed 'A Ricarte, general-in-chief.' He saw the letter and signature and studied it well. The province is badly in need of bridges on the main road along the coast leading north from San Fernando, hardly any of which are passable at present. The new governor, Señor Joaquín Luna, was inaugurated on March 7, and the recent municipal elections are thought to have resulted most admirably for the future of the province. The *presidentes* are all of the better class of Filipinos, being young and energetic, and a great many speak English. Much activity on their part for the good of the province is looked for.

LEPANTO-BONTOC.

Disposition of constabulary, June 30, 1904.—Cervantes: Capt. C. E. Nathorst, senior inspector; Third Lieut. D. R. Wilcox, supply officer, 31 men. Bontoc: Subinspector Santiago Robles, 32 men. Lubuagan: Second Lieut. Harry E. Miller, 25 men. Aillem: Third Lieut. Arthur J. Irwin, 12 men. San Emilio: 8 men. Concepcion: 8 men. Quinali: 5 men. Detached service: Fourth district band, 5 men; from Ilocos Sur, Second Lieut. Harry E. Miller. Total, 7 stations, 5 officers, 126 enlisted men. Authorized strength, 165.

Expeditions and patrols, 22; miles covered, 1,672; engagements, 3; outlaws killed, 1; outlaws wounded, unknown; outlaws captured, none. Arms and ammunition captured, 1 shotgun, 1 Spanish rifle, 30 rounds Krag. Other property recovered, 5 carabaos, 3 ponies, 1 cow. Constabulary casualties, 1 killed, 1 wounded. Arms lost by constabulary, none.

Conditions in this interior mountain province are very good. The inhabitants are nearly all Igorrotes, with a sprinkling of Ilocanos. The greatest difficulty encountered by the constabulary of this province is in transportation of their supplies to and from the coast.

The supplies for this purpose are unloaded at San Esteban, Ilocos Sur, and at present are carried inland by Igorrote carriers. This system, however, is very unsatisfactory and expensive. Requisition has been made for a pack train for this work, and if the number asked for in the requisition is supplied it will do away entirely with the unreliable and expensive Igorrote carrier system.

In the month of November the district chief made an extended, and what proved to be a very interesting, trip through the savage, remote mountain district in the back country of the two provinces of Abra and Lepanto-Bontoc. The start was made from Bangued, Abra, on November 21. The Cordillera Real was crossed on the 26th. The party then went down the Saltan River country as far as Balbalasan, visiting on the way the towns of Bucay, San Jose, Manabo, Lamao, Lingey, and Tu-i. Balbalasan is where a constabulary post had been recommended placed by Captain Nathorst, who was the only official from Lepanto-Bontoc who had ever visited that section. From Balbalasan the party was compelled to take up its travel afoot, as horses could not be taken further. The route lay through the towns of Gadang, Guinaan, Poapo, and Lubuagan. Thanksgiving Day was spent crossing the Cordillera Real, and the Cordillera Central was crossed November 28, the party climbing from daylight until 8 p. m., and reaching an altitude of about 6,500 feet. The people were extremely friendly in all the towns except Lubuagan, where they almost showed open enmity. By treating them in a very friendly way, however, and making them little presents, we gained their friendship and were fairly well treated during our stay, which was only overnight. Our route lay from there through Mabontoc, Bangued, Tinglayan, thence down to Bontoc, the old capital of that province. The party struck the coast again at Candon. The district chief arrived at Vigan on December 16.

The expedition was extremely instructive. An American flag was presented to each wild Igorrote town, and presents were also made of brass wire, red cloth, pipes, gee strings, and other stuff to the people as we passed along. They thought a great deal of the flags in all the towns except the town of Lubuagan mentioned above. At that place the flag was presented with some ceremony to the "baccag," or headman, but it was stolen from him by some of his retainers, and when he endeavored to find it he could not do so. The people of this town are not very friendly with either Mabontoc or Balbalasan, and are at open enmity with Bangued, which is farther down from Mabontoc. At Mabontoc the character of the people changed very noticeably, and we were received in a very friendly manner. This is due to the fact that this place is visited from time to time by Americans from Bontoc. It was intended by the district chief to visit also the Quiangan country of Nueva Vizcaya, but on account of the rains this part of the trip had to be canceled. At present in these black savage Igorrote districts there is no recognized law except their own savage customs which have been prevalent for centuries. The people murder and plunder each other at will. They recognize the Government of the United States, but are never visited, some of them, and have no directing hand in close touch with them. A constabulary garrison of some strength has been placed at Lubuagan, which is in charge of Lieutenant Miller, a clean, efficient, and tactful officer. Attention is invited to recommendations given at the end of this report for the proper government of these people.

On the night of October 25 a terrific rain and wind storm struck the province, lasting all the following night and doing considerable damage. An enormous quantity of water fell, more than ever known before. Nine people were reported killed—5 being buried by a landslide at Mancayan and 4 drowned at Abayag. The constabulary buildings at Cervantes were badly damaged.

On November 14 Captain Nathorst was relieved as senior inspector by First Lieut. E. A. Eckman, the former having been assigned to command the province of La Union. In May of this year Captain Nathorst was recommended to command Lepanto-Bontoc, however, and as he wields considerable influence with the Igorrotes there by virtue of his long residence with them, it is thought the little troubles which have cropped out will soon be regulated.

During the month of January several cases of head-hunting were reported from the northern section of Bontoc, and the lieutenant-governor of the province, Mr. Folkmar, and Lieutenant Bennett attempted to apprehend the perpetrators of the depredations, but without much result. A detailed statement of this will be found in the report of the district chief for the quarter ending March 31, 1904.

In the Asin and Quiangan Valley districts, which lie across the boundary in Nueva Vizcaya Province, the Igorrotes are of the very worst type. That district being so isolated, they are seldom visited by any other Igorrotes or anyone else, and it is well known that any Igorrote driven from a Lepanto or Bontoc town for misconduct or crime usually takes up his residence there, where it is hard to ferret him out, as he is generally protected by the many shady characters who live there. News travels very fast among them, and they are aware as soon as a strange person, Igorrote or other, sets foot in their section. They have quite a number of arms, some of them Krag and Mausers, which they apparently take good care of and use them when any intruders come into their territory.

Considerable trouble from time to time has especially been caused by the Igorrotes of Guines, Nueva Vizcaya Province, coming over the divide into Bontoc, making reprisals and carrying off heads of the Bontoc villagers. These Guines people are Mayayaos, and their special energies seem to be directed against the town of Balangao in Bontoc and not far from Guines, but two or three days' march from Bontoc over an almost impassable trail. The town of Guines lies about 12 miles beyond the eastern boundary of Bontoc into Nueva Vizcaya. The exact location was not known until Lieutenant Miller, who recently made a trip over there, made his report. Miller thinks the *teniente* of "pusijes" (an Igorrote corruption for "fusiles," which in English means guns) mentioned in his report is probably an ex-insurgent renegade who has made his retreat in that district for some time, and has gained some influence by virtue of a few guns, and has gathered some Igorrote warriors around him as a combination for defense and offense. It is understood that there are now constabulary posts at Quiangan and Banauey, in Nueva Vizcaya Province. These detachments are well placed to keep law and order there and in the vicinity of Guines, and it is hoped that these people will now be prevented from making further raids over into Bontoc.

When notice of the depredations in Bontoc by these Nueva Vizcaya savages was first received, the governor of Nueva Vizcaya was notified by wire. No answer, however, was received from him, and the senior inspector of Lepanto-Bontoc considered he was justified in sending some Bontoc constabulary down there. The expedition was a hard one and over very bad trails. Lieutenant Miller, who was in command of the detachment, has made a very interesting report, in which he describes the way in which these savages fight among themselves, and is the first constabulary officer and undoubtedly the first American who has witnessed one of these combats in a manner from which he could make an authentic report. An extract from Lieutenant Miller's report follows:

"The object of the expedition was to arrest five *alzados* of the barrio of Guines for whom I held a warrant. These five men were charged with the crime of killing and taking heads at the barrio of Balangao, Bontoc. It was also the object to get further information concerning the head-hunting affair and the names of all witnesses of the crime. In their complaint the people of Balangao stated that the people of Guines had 10 guns and that 2 of the victims had been killed by bullet. The people of Guines had made two raids into the barrio of Balangao. In the first raid 4 people of Balangao had been killed, and in the second raid a woman had been killed. All the victims had been decapitated and their arms and legs cut off and taken away.

"With the foregoing meager information, and with a knowledge of the general direction of the barrio of Balangao, I started on my way to that barrio at 8.30 a. m., March 12, 1904. My force consisted of a detachment of 20 enlisted men of the station of Bontoc, and we were accompanied by an Igorrote of the barrio of Talubin who had been recommended to me by the lieutenant-governor of this subprovince as a man who desired to aid in the suppression of head-hunting and the preservation of peace among the barrios of this province.

"At 11.30 a. m. we arrived at the barrio of Talubin, a friendly Igorrote rancheria. At Talubin dinner was eaten and enough rice to last the detachment to Barlig was procured, and at 1 o'clock sharp we took up the march.

"At 5.25 p. m. a halt was made for the night at a point near the top of the Polis Range, which was the last place that water could be procured on the trail to Barlig. At 5 a. m., after having eaten breakfast, the detachment was on the climb, and at 6.35 a. m. the top of the range was reached. At 7.40 a. m. we were met by the presidente of Barlig with an escort of about 20 men of his barrio. At 8.30 a. m. the edge of Barlig was reached. This was the first occasion of any troops entering this barrio since the punishment of the barrio several months ago by a large detachment under command of Captain Nathorst, and the inhabitants were found prepared to fight, not knowing the object of the expedition. The people were told through their presidente that we meant them no harm and we would proceed on the trail after dinner. Although the young men and a few of the women were desirous of making us trouble, a clash was avoided, and at 11.30 a. m. we were on the march to Balangao. The presidente of Barlig, being a friend of the barrio of Balangao, was taken with us for guide and interpreter.

"When about 3 or 4 miles from Barlig we were overtaken by about 20 Igorrotes from that town, who stated that they wished to accompany their presidente. These men were all armed to the teeth and apparently feared that we intended to arrest their presidente. Our object was explained to them and they were allowed to accompany us, as it was believed that this action would increase their confidence in us, and it was also desired that they should know that we were not afraid of them. It was rather fortunate for us that we had been joined by them, as their services were much needed as *cargadores* of rations during the remainder of the trip. At about 5 p. m. we encamped under an overhanging rock on a small river in the range between Lais and Balangao.

"At 6 o'clock on the following morning, March 14, we were on the climb, and at about 9.30 a. m. we reached the top of the range. Shortly before reaching Balangao we were met

The supplies for this purpose are unloaded at San Esteban, Ilocos Sur, and at present are carried inland by Igorrote carriers. This system, however, is very unsatisfactory and expensive. Requisition has been made for a pack train for this work, and if the number asked for in the requisition is supplied it will do away entirely with the unreliable and expensive Igorrote carrier system.

At 7.40 a. m. we were met by the presidente of Barlig with an escort of about 20 men of his barrio. At 8.30 a. m. the edge of Barlig was reached. This was the first occasion of any troops entering this barrio since the punishment of the barrio several months ago by a large detachment under command of Captain Nathorst, and the inhabitants were found prepared to fight, not knowing the object of the expedition. The people were told through their presidente that we meant them no harm and we would proceed on the trail after dinner. Although the young men and a few of the women were desirous of making us trouble, a clash was avoided, and at 11.30 a. m. we were on the march to Balangao. The presidente of Barlig, being a friend of the barrio of Balangao, was taken with us for guide and interpreter.

"When about 3 or 4 miles from Barlig we were overtaken by about 20 Igorrotes from that town, who stated that they wished to accompany their presidente. These men were all armed to the teeth and apparently feared that we intended to arrest their presidente. Our object was explained to them and they were allowed to accompany us, as it was believed that this action would increase their confidence in us, and it was also desired that they should know that we were not afraid of them. It was rather fortunate for us that we had been joined by them, as their services were much needed as cargadores of rations during the remainder of the trip. At about 5 p. m. we encamped under an overhanging rock on a small river in the range between Lais and Balangao.

"At 6 o'clock on the following morning, March 14, we were on the climb, and at about 9.30 a. m. we reached the top of the range. Shortly before reaching Balangao we were met

by the presidente and about 10 men of that town. Balangao was reached at about 10.30 a. m., and the day was spent in investigating concerning the heads which had been taken there by the people of Guines. Information obtained in Bontoc was corroborated by the statements of eyewitnesses to the murder and decapitation. During the evening preparations were made for an early start to Guines. Food was prepared and arrangements were made that 10 of the Barlig men were to accompany us as cargadores, while the rest were to remain at Balangao until our return. As it was necessary to take an interpreter with us from the barrio of Balangao, the presidente of that rancheria was asked for one and volunteered himself. Upon being told that he could not take any of his people with him he appeared greatly surprised that a detachment of 20 soldiers should go into Guines, and said that we would certainly all be killed, as Guines had 2,000 warriors. I explained to him that we did not want to fight the Guines people and that I did not think that they would be unfriendly to us. He said that he knew that they would fight us, as they had sent him word that the more soldiers that came the better they would be pleased, for they would take all our heads.

"At 4 a. m., March 15, we took up the march to Guines, accompanied by the guide from Talubin, the presidente of Barlig, with 8 of his men *i. e.* cargadores, the presidente of Balangao, and 1 of his people to cut out obstructions on the trail. Between Balangao and Guines there is a very high range of mountains, and the trail led over the highest peak in the range. [This range divides Nueva Vizcaya from Bontoc]. This mountain is very steep, and in many places we had to pull each other up for several yards and very often had to pull ourselves up the trail by the roots of trees. This trail, though bad enough at the beginning, degenerated into a tangle over the top of the ridge. In several places on this trail we found where the Guines people had camped during their raid. At about 12 o'clock noon we reached the top of the mountain and began the descent. When about half way down the mountain the baying of dogs and the crying of the Guines people were heard below us, where they were hunting deer, and at about 1.30 we were seen by them and they gave the alarm. Soon afterwards we reached a small river which ran through Guines. At that place a Guines "alzado" was seen near us in a waiting position with his spear poised to throw, but who ran when he saw that we had seen him. As our trail led for some distance yet through the thick wood and underbrush, it was decided to put the detachment through at the greatest possible speed, and if possible reach Guines before the alarm could be given there. After proceeding a short distance down the ravine my first sergeant came up to tell me that some of the Balangao people were behind us. I halted the detachment, and going to the rear found that we had been overtaken by about 10 of the Balangao people, whereupon I ordered the presidente of Balangao to take his people and return immediately to their barrio. He told me that they refused to go unless I would guard them back, saying that they were already surrounded in the rear by the Guines people. Finding that it would be impossible to get the Balangao people to return without a guard, and the presidente having promised me that he would not allow his men to menace the Guines people in any way, I decided to enter Guines as quickly as possible in the hopes of finding some of the men whom I wanted to arrest before the alarm could be given. To turn back I would have had to come in contact with the Guines people, apparently about 30 Guines warriors, who were advancing and shaking their spears in a menacing manner. I accordingly advanced on Guines as fast as possible, and after about half an hour emerged into an open grassy country. At about 2.30 p. m. we were in plain view of the barrio and could see the people of Guines taking the alarm. Many of the Guines people could be seen closing in behind us from all directions. Shortly afterwards an old man appeared in front of us and told us to 'come on,' and motioning us to advance, but every time we came near him he would run off ahead of us motioning us to come after him. We followed him and were led to the place where they evidently wanted to get us. The position was perfectly satisfactory for the purpose of defense and no alarm was felt, as we were among the rice terraces, where we could have defended ourselves against thousands. Having halted the detachment, several young men of Guines were seen running towards us with a Katipunan flag, which they stuck in a rice terrace a short distance below us and came on professing friendship. We received them pleasantly and told them that we were their friends and only on a friendly visit. The mayor of the barrio brought a roll of papers, which I examined and found they were all Spanish and insurgent papers. They explained to me that they had a 'teniente,' whom they would call to see me, and whom they said lived in the other end of the barrio. We asked to whom the flag belonged and they said that it belonged to the 'teniente pusijes,' meaning 'lieutenant of rifles.' They repeated that they had sent for him and that he would come soon.

"Seeing that hundreds of warriors were coming up over the rice terraces below, the mayor was directed to tell them to leave their arms, as we were friends. He was answered with jeers, and they all began to sing their war songs. Soon afterwards a long line of men was seen coming down over the trail over which we had come, and who soon proved to be Balangao warriors who had taken advantage of an open trail and followed us at a dis-

tance. Affairs had taken a very serious turn, but this could not have been foreseen, for Balangao was buried in sleep when we left it. The presidente of Balangao was directed to take his men back to Balangao immediately, and was told that if he allowed his men to attack the men of Guines I would fire on the Balangao warriors. He tried to turn his men back, but his attempts were unavailing and his warriors soon began to arrive. One of their leaders explained to me that he thought we would all be killed and had come to our aid. The presidente soon returned to me and said that his men were afraid to return unless we could guard them back. While we were trying to get the Balangao people turned back one of their warriors came up to me shouting that one of the Guines warriors had attacked him, but he had killed him, and showed me a gaping wound in his head. They had encountered the Guines warriors, who had closed in behind us. The Balangao warriors were at last turned back, their presidente being promised that we would prevent the Guines people from advancing from below us, it being our intention to remain at Guines. It was believed that the Balangao warriors could very safely return to their barrio without being attacked, as they were about 600 or 700 strong, while we could prevent the main body of warriors of Guines from attacking them, as they were below us on the rice terraces.

"The mayor of Guines was caused to explain to the Guines people that the Balangao people would return to their barrio, and that if they attacked them we would fire on them. This was answered with jeers, and the soldiers explained to me that the Guines people were saying 'wait until to-night, wait until to-night,' and that some were saying that they would 'soon have our rifles,' and that their 'teniente would soon come.'

"About this time a large body of Guines warriors was seen to break from the high grass upon the retiring Balangao warriors. I attempted to place my detachment between the assailants and the assailed, but it was necessary to cross a number of rice terraces which were blocked in places by the Balangao people. When within a few yards of the scene of the combat, and two terraces above it, we could go no further, as many of the Balangao warriors were trying to retreat over the same terrace. Although I tried to stop the fighting by shouting at them and threatening them, my voice was drowned in the noise, and had they been able to hear me they could not have understood me. While in that position two of the Balangao warriors were killed by their opponents within a few yards of me.

"The fighting was in the form of duels, two and two fighting, while the other warriors would not interfere. The combatants did not throw their spears, but thrust with them and guarded with their shields. After one of the combatants was down the other was allowed to finish killing him. In one case the victor was seen to twist his spear in the body of the unfortunate opponent. In several cases one of the opponents being wounded would make his way back to his friends alive.

"I was unable to stop the fighting, being blocked in my progress. A large number of Guines warriors was seen a short distance away and advancing from below. It was decided to turn them back by firing in front of them. This ruse proved successful, and they retreated after a few shots had been fired close in front of them, whereupon all the Guines warriors who were making the attack on the Balangao people retreated also.

"The Balangao people, fearing to return by the same trail over which they had come, crossed a corner of the barrio to gain another trail. They burned all the houses in their progress. This I was unable to prevent, as we could not make much progress across the terraces, and one of my cargadores from Barlig, having been speared through the leg, had to be carried. A small squad of my detachment, having at the beginning of the assault been ordered to seize the Katipunan flag, had not yet returned. Upon the arrival of the squad the flag was taken by me and we proceeded as fast as possible after the Balangao people to prevent further destruction of houses, but did not come up with them until they had reached the edge of the barrio, where they all stopped, fearing to go farther, as hundreds of the Guines warriors could be seen on the mountain ahead.

"As it was nearly sunset it was decided to camp in Guines for the night, and it was evident that the Balangao people must be guarded home to prevent a catastrophe. An excellent camping place was found near by, on the end of a small spur of the mountain, which was flanked on three sides by the rice terraces. In this camping place the Balangao people were assigned to one side, while my detachment, with the cargadores, occupied the most exposed side. The camping place, being only about 30 yards in width, was quite crowded, though easily guarded.

"Two of the Balangao warriors came up to me to have spears removed from their legs, each one having a spear driven to the haft in one leg. As the spears were barbed, it was necessary to remove the hafts and force the spear on through the leg, but both operations were performed successfully and both men were able to walk the next day. A young Balangao warrior of about 12 years of age, who had had one hand almost severed at the wrist, was brought to me, but nothing could be done for him, as the bones had been cut smooth and he was dying from loss of blood.

"It was found that 3 of the Balangao warriors had been killed, one of whom was the son of the presidente of Balangao. Of these, 2 had been decapitated and left on the field, and

the third, the presidente's son, had been seized by the Balangao people before he could be decapitated and had been brought into camp. Four of the Balangao warriors had been severely wounded and a large number slightly wounded, and one of my cargadores had been seriously wounded. With the exception of 1 warrior, who had been killed earlier in the evening on the trail, none had been killed. One of the Guines warriors was seen to retreat with a spear in one ankle, however. The number of houses burned by the Balangao people is estimated at 30.

"An interesting custom of the Balangao people was observed at dusk, when they established an outpost. A squad of about 10 men were sent a short distance in advance of their camp. After sharpening a number of sticks about 4 feet in length, they placed them a few yards in advance of their position, slanting outward in such a manner that the sharpened points would no doubt kill or seriously wound anyone who should run against them in the dark.

"During the earlier hours of the night nothing occurred of importance, though the Guines warriors were seen within 100 yards of our camp on the hillside, singing their war songs and challenging us to come out, and the Balangao warriors were challenging them to come in. At about 10 o'clock a spear was thrown into the Balangao outpost, whereupon they ran in. Shortly afterwards a spear was thrown among my detachment, wounding a Barlig cargador in the back of the neck. Rocks were thrown into camp, but no one was injured by them, as all the men except my soldiers had shields. At about 12 o'clock a shot was fired into camp from the top of a hill about 50 yards away. No one was hit by the bullet. While our camp was as light as day from the fires which were kept lighted and was packed like sardines, no one was hit, although two more shots were fired from different positions very near the camp. It is believed that there was but one gun being fired, and that it was fired from different positions for effect.

"In order to weaken the prestige of this 'teniente pusijes' among the Guines people, I challenged him to fight a duel with me alone, and offered to go out to meet him. He would not accept my challenge, although it was repeated several times. It is not doubted that I could easily have killed him in a duel, but it was known that he would not accept. At about 3 o'clock in the morning, while standing up near the edge of the camp and watching one of the Guines people who was throwing rocks into camp, a shot was fired at only 6 or 8 yards' distance from me, but the bullet went wild. A shot was instantly fired into the darkness, which quieted the Katipunan rifle until daylight.

"At daylight, March 16, the presidente of Balangao was informed that he must immediately prepare to march, and that we would guard his people home. He was also informed that my detachment would march in front, rear, or center of his people, as he should elect. I was informed that he desired us to march in the rear, as it was the custom of the Guines people to close in on the rear of those whom they attacked on a trail.

"At about 6 a. m. the son of the presidente of Balangao, who had been killed in a duel the evening before, was laid on his shield and slung to two parallel poles. Some of the bravest Balangao warriors were chosen to walk near the litter of the dead to prevent the Guines people from taking the head of the corpse.

"Everything being prepared, at 6.15 the Balangao people started over the trail, the presidente in advance, and all singing their war song. At a point about 1 mile from the camping ground the Katipunan rifle was fired from a thicket about 200 yards from the trail. From that position about 25 shots were fired on the Balangao people as they passed, but upon our arrival at that point no more shots were fired. The Katipunan 'lieutenant of rifles' was again challenged to single combat, but did not answer.

"Shortly before reaching this point a spear was thrown at the detachment commander from the high grass above the trail. This spear was brought in, with the Katipunan flag, and is a very peculiar specimen, having six barbs.

"Shortly afterwards a spearman arose to throw a spear, when a soldier instantly fired at him. He was seen to be carried away by his companions and it is believed was killed.

"Nothing of importance occurred after this event, although the Guines warriors followed us at a short distance for several miles. The Balangao people were not molested on the trail, though the presidente was seriously wounded in the foot by a sharpened stick planted in the trail.

"On the following day we marched to Barlig and encamped there overnight. The Barlig people were very friendly to us. The following day, March 18, my detachment arrived at Bontoc.

"It is believed that there is but one insurgent at Guines, who has perhaps been there ever since Aguinaldo passed through in his flight through this country. There is apparently but one rifle, which is no doubt a muzzle-loader, as it took from two to three minutes to load. If there are more rifles they were not fired.

"The enlisted men of my detachment behaved excellently and did perfect hiking. It was found that the soldiers do most excellent hiking when dressed in khaki hats, blue shirts, and gee-strings, the trousers not being worn."

These savages of the Quiangan district are very hostile, as Lieutenant Miller's report shows, and should be taken in hand by the Nueva Viscaya constabulary.

The constabulary of Lepanto-Bontoc, upon being apprised of the Vigan mutiny, according to instructions immediately blocked all trails leading into the interior. The senior inspector states that his men, who are mostly Igorrotes, were very anxious to meet the renegades and show them what they could do with the guns the Americans had given them. It is the first time in the history of their country that the Igorrotes themselves have been trusted with guns. Some hundreds of them were taken down to Manila during the insurrection and were sent up against the Utah Battery, near Caloocan, armed with their spears, axes, and wooden shields. What happened to them was plenty, so far as they were concerned, and they have never forgotten it and are only too anxious for an opportunity to get even some time with their new guns on the low-country Filipinos who took them down there.

The province is still repairing roads and trails leading from Bontoc to Barlig, and from Bontoc northward, as well as to the Amburayan district.

RECOMMENDATIONS.

CONSTABULARY.

Uniforms.—In the matter of uniforms it is recommended that only the canvas and tan shoe be issued, to be worn with leggings. It is recommended that leggings be issued throughout to the entire constabulary in sufficient quantity to make them available at all times and in all formations as a part of the uniform. The high-top shoe has proved, as a general rule, unsatisfactory for our service in this district, and the legging, whether issued or not, is invariably procured in some manner by most of the men and used, as they desire them very much for use in the field and on marches. For formation and parades the brown canvas legging, worn with brown canvas shoes, makes a very pleasing effect.

It is also recommended that the regular 3-inch-brim felt campaign hat, to be worn with a red cord, be adopted for use in the constabulary, instead of the narrow-rim canvas hat, which affords very little protection from the sun, as the rim is very narrow and the crown very low. The high-crown, 3-inch-brim felt hat is much more desirable for the constabulary, in consideration of the general field duties performed by them.

Rations.—It is recommended that the enlisted men be rationed with a fixed ration in kind, as is done with the scouts. This appears to be the only satisfactory system that will meet the test in all localities and under all conditions. If men were rationed in kind it would insure a better quality of food and a more regular supply. Two-thirds of the army ration is thought to be no more than sufficient. The savings from this ration could then be used for improving messes in general, and accounts of same should be kept, the same as a company fund in the United States Army, and might be used in buying conveniences, etc., upon the recommendation of the senior inspector to the district chief. Men traveling should be given 40 cents Philippine currency per day.

It is thought that the above arrangement would create better satisfaction among the men in general and, although creating necessity for somewhat more transportation, would in the end probably prove more economical and for the general betterment of our service.

Forage.—Recognizing that there was need for an alteration, somewhat, of the present forage allowance, at least for the fourth district, the district chief appointed a board of officers to investigate, report upon, and make recommendations in the premises. The report of this forage board has just been received and will be forwarded under separate cover.

The general opinion is that the allowance of grass, as provided by Executive Order No. 73, is not enough, while the grain component is quite adequate. In the recommendations submitted by some senior inspectors it is stated that the combinations fixed in mentioned order is not practicable in their provinces. The opinion is held that these combinations can be changed, however, using any two components found best adapted to conditions in the different localities.

In reference to the inadequate allowance of grass, it was found that in Abra, and in Vigan, and other places where they pretend to take good care of their horses, they feed about 5 pounds of grain and about 50 pounds of grass per horse per day, and that after soaking the grain in water before feeding, a small quantity of crude molasses ("miel," as it is styled) is mixed with it.

General Orders, No. 48, Headquarters Department of the Pacific and Eighth Army Corps, dated Manila, P. I., September 15, 1899, made the following allowance for native ponies per day: Six pounds paddy, 3 pounds tiqui-tiqui, 1½ pounds miel, 35 pounds grass.

The above allowance, as compared with the present allowance for native ponies, is ridiculously large, or else ours is likewise small. We have no allowance for miel or even salt. The opinion is held that the best staple forage for our horses, considering the nature of their work, is palay and grass, and liberal, not extravagant, allowance of both. Our present allowance of grass, 30 pounds, is not even as large as the allowance for grass in the general orders mentioned, leaving out of consideration the other ingredients in that order. The

allowance of grass for native ponies should be increased to at least 40 pounds per day, and the Chinese or Australian horses to 50 pounds.

In provinces where corn is fed the horses do not do as well, and it is thought corn is too heating. To those provinces it is thought palay should be shipped from Manila.

In purchasing palay care should be taken that the price given is for threshed palay, as in most provinces where palay is purchased it is done up in bundles with half of the stalk attached, and of course sells much cheaper, as it is half straw. A mistaken idea is thus conveyed that palay is extremely cheap in some provinces, when in reality it is dear, and palay might better be shipped. The district chief keeps two native ponies in good condition by buying 50 pounds of grass extra each day. It is hoped that efficient persons may be chosen to regulate this question of forage, and that it may be done at an early date.

MUNICIPAL POLICE.

It is recommended that the municipal police in all provinces be removed from the absolute control of the presidentes of the different towns, and provincial police in general be placed in a separate corps by themselves by legislation of the Commission; that this corps of provincial and municipal police have a higher officer in Manila to be general superintendent of police; that regulations governing the organization and governing of the police be sent out from Manila; that the police of a province be indirectly under the senior inspector of the province, and directly under an officer of constabulary detailed in each province as inspector of police; that the police be called "provincial police," and be supported by the province, if possible, if not, by the insular government, or in part by the province and in part by the insular government. These police should be uniformed alike in all provinces, that they may be recognized as police by a person traveling from one section of the country to the other. At present the police are generally under the power of the presidentes all over the archipelago. They wear a hundred different kinds of uniforms, according to the artistic flourish or fancy of the particular presidente under whom they serve, and their efficiency is likewise gauged according to the good or bad intentions or mood of the presidente under whom they serve.

In some provinces where the police have been placed under the inspection and control of the constabulary there had been signal success. In other provinces the governor and presidentes are opposed to this, for the reason that it does not give them sufficient power in their machinations and coercions of the Tao class of people to follow their absolute desires in every matter, whether for the general public good or for private gain.

A slight study of these conditions will make the matter very clear to anyone interested. In this connection, attention is respectfully invited to the recommendations made by the fourth district chief in his report for the quarter ending September 30, 1903.

GOVERNMENT OF IGORROTES AND HILL TRIBES OF THE INTERIOR.

At present there are vast districts where there is no recognized law except the savage customs of the people which have prevailed for centuries. Many of the people are never visited, some of them, no doubt, never having seen white men, and at present there is no directing hand in close touch with them. A part of them have heard of and recognize the Government of the United States. Others have made pueblos and towns and have a presidente, or headman, who, at some time or other, has been presented with a cane by one or the other of the governors or lieutenant-governors who have held sway at different times in the province of Lepanto-Bontoc.

The repeated changing of lieutenant-governors of the Bontoc district, it is believed, is having a very bad effect on the people, owing to their indiscretion in the handling and their general ignorance of the people, their customs and the country in general. The third lieutenant-governor who held sway in the subprovince of Bontoc gave a native, who had committed murder, his complete liberty, after a farce of an examination in his justice court, which, of course, had no jurisdiction for trial of such cases. This native was rearrested and held for trial afterwards to the court of first instance by the fiscal of the mountain district, and the murderer was given twelve years by Judge Buritt.

The real authority of a lieutenant-governor in one of the subprovinces does not have very great weight with these savage people anyway. The headmen and others generally have come to constabulary officers, whom they recognize as the men in power, as they command the police force, which they recognize above everything else. The lieutenant-governors upon their arrival call the people together and have a powwow, the effect of which is lost upon the people, as they have had numerous powwows of this character within the last year or so.

The influence exerted over these people by having their young men enlist in the military police has been very great. The young men so enlisted have taken given and surnames, have cut their hair (which is a very extraordinary thing), have taken the rings off their ears and off their legs and arms, wash themselves regularly, eat at tables, are learning to read

and write, and in fact are becoming pretty well civilized considering the time the constabulary officers have been with them. Those of the soldiers who are married have in most instances taken their wives and children from the dirty hovels in which they existed before their entrance into the constabulary and placed them in very neatly made pine houses, and require them to wear clothes like the more civilized tribes. The influence is very great and can be seen on all sides.

It is recommended that a system be inaugurated of officers, appointed as our Indian agents are appointed at home, but that they be appointed from clean, efficient and tactful constabulary officers, to be chosen by the chief of constabulary. That the governor of Lepanto-Bontoc be a constabulary officer with the grade of captain or major, and that he also have charge of the Bontoc constabulary. That in the different subdistricts there be placed tactful constabulary officers, who may be deputy governors ex officio and justices of the peace. It is thought that the whole Igorrote country should be covered in this manner and cut out from the different provinces, and an adaptable system of government adopted for it. In case it is not desired to make a district by itself, the different sections of the different provinces might be governed by a constabulary officer or officers in addition to their other duties, as stated above, and so far as administrative matters are concerned he should be subservient to the provincial governor of the province in which he serves. This system, it is certain, would improve conditions and reduce expenses considerably for the insular government.

When these people, or some of them, are fully able to hold office, then is the time to institute advanced civil government among them; but as long as they are in their savage state this should not be done, as they care nothing for it, and take it as an unnecessary molestation for them. For this reason, it is believed that at present a system of officers appointed judiciously from the constabulary, as our Indian agents are appointed at home, will accomplish better results at a less expense, and the present form of government now in vogue in Lepanto-Bontoc and the other districts be administered more efficiently and for a better advancement of the people.

Respectfully submitted.

J. S. GARWOOD,

Major and Assistant Chief, Philippines Constabulary, Commanding Fourth District.

THE ADJUTANT-GENERAL, PHILIPPINES CONSTABULARY,
Manila, P. I.

Aggregate result of operations in the fourth constabulary district.

Number of expeditions.....	462
Number of miles covered.....	26,475
Number of engagements.....	6
Outlaws killed.....	17
Outlaws captured.....	86
Outlaws wounded.....	Unknown.

REPORT OF THE DISTRICT SURGEON.

HEADQUARTERS FOURTH DISTRICT, PHILIPPINES CONSTABULARY,
MEDICAL DIVISION,
Vigan, P. I., June 30, 1904.

SIR: I have the honor to submit the following report of the operations of the medical division in this district for the fiscal year ending June 30, 1904:

This report must necessarily cover but five months of the year, less eight days, this office not having been established until my arrival, February 7, 1904.

During this period the health of the command has been very satisfactory, as will be seen from the following statement tabulated from records believed to be accurate:

Intestinal diseases.....	20	Beriberi.....	3
Pulmonary diseases.....	21	Minor ailments.....	15
Surgical diseases.....	22	Days lost in hospital.....	470
Veneral diseases.....	18	Days lost in quarters.....	450
Malarial fevers.....	54	Died.....	3
Dengue.....	2		

Two of the deaths above referred to were caused by beriberi, both men belonging to the constabulary of Isabela. The third was caused by the killing of Private Bautista by the Vigan mutineers February 7.

It will be noted from this report that the malarial fevers have so far been the greatest cause of inefficiency. The consensus of medical opinion at present favoring the mosquito as the most active, if not the only, medium through which the malarial organism is conveyed and the disease propagated, the command should be provided with and required by order to use mosquito bars. Cots should also be furnished without delay.

Hospitals.—Two well-equipped hospitals are in operation in the district, one located at Ilagan, Isabela, established about a year ago, and the other at Vigan, established March 15, 1904. Both have rendered most excellent service, and, in my opinion, are a credit to the constabulary.

In my report for the quarter ending March 30, 1904, it was recommended that the hospital at Ilagan be transferred to Tuguegarao, the latter station being nearer a majority of the troops serving in that section of the district. Authority for such transfer has since been granted, but on account of the difficulty encountered in securing a suitable building, it has not as yet been effected. It is believed that the government already has at that station sufficient material to build an entirely new house for this purpose, and such action

is especially urged as being highly necessary to the efficiency of the medical division. The reasons why are too apparent for argument.

Supplies.—Authority has been secured to establish a medical supply depot at these headquarters, and requisition for supplies sufficient to cover a period of six months was forwarded some time ago.

It is thought this plan of supplying provinces remote from the hospitals will prove much more satisfactory than the present arrangement of sending small requisitions from each to Manila at different intervals, as much confusion and delay in getting supplies to their destination will be avoided.

The strength of the division at present is as follows: One surgeon, 1 medical inspector, 2 corporals, and 20 first-class privates. The medical inspector at Vigan having been recently ordered to Manila, the hospital at that station is for the present under the immediate supervision of this office. The inspector in charge at Hagan is also under orders transferring him from the district, and is now awaiting transportation.

It is hoped and urgently recommended that these officers be replaced at the earliest practicable moment, as without them a maximum of efficiency or even a fair administration of this division can not be realized.

Enlisted men.—All the provinces embraced by the district, with the single exception of Benguet, have been supplied with qualified enlisted men of the division who have undergone several months of instruction, and are believed to be capable of attending such of the sick as do not require hospital treatment.

For a more detailed and extended statement of the work accomplished by this division, reference should be made to my report for the quarter ending March 31, 1904.

Respectfully submitted,

Very respectfully,

T. C. WALKER,

Captain and Surgeon, Philippines Constabulary, District Surgeon.

The ADJUTANT, FOURTH DISTRICT CONSTABULARY,

Vigan, P. I.

REPORT OF THE DISTRICT TELEGRAPH OFFICER.

HEADQUARTERS FOURTH DISTRICT, PHILIPPINES CONSTABULARY,

TELEGRAPH DIVISION,

Vigan, P. I., June 30, 1904.

SIR: I have the honor to submit the following report of the telegraph division of the fourth district for fiscal year ending June 30, 1904.

The undersigned took charge of the telegraph division, fourth district, July 21, 1903, with Third-class Inspector George Keech at Baguio, Benguet, Third-class Inspector George Rickard at San Fernando, Union, and Third-class Inspector Charles M. Sides at Vigan, Ilocos Sur. The telegraph and telephone lines in the district upon my arrival were in as good condition as possible, considering the force then present to take care of them. Work on the reconstruction of the line from Cabugao, Ilocos Sur, to Laoag, Ilocos Norte, was commenced about the middle of July, but owing to the lack of material only about 7 miles of iron poles had been set up to July 29. Lieutenant Keech was relieved from duty in the province of Benguet August 14 for the purpose of superintending the construction work in this district, and upon his arrival at these headquarters was placed in charge of the reconstruction of the Laoag line. Work now progressed rapidly, and as material had been sent up from Vigan for this work, the same was completed September 30, 1903. Laoag, Currimaos, and Badoc offices were opened for business October 1.

The telegraph line was completed between Cervantes and Bontoc on September 23, but owing to bad condition of trails and rivers it was impossible to send a native operator to Bontoc to open the telegraph office until the rains were over.

The changing of the Laoag line to iron poles makes a total of 187 miles of constructed iron-pole line in this district, from Dagupan to Laoag, Ilocos Norte, all No. 9 galvanized-iron wire. Branch lines on wooden poles, No. 9 galvanized-iron wire, Western Union standard insulators, are as follows: San Fernando, Union, to Baguio, Benguet, via Baoang, 30 miles; Candon, Ilocos Sur, to Bontoc, 55 miles; Vigan to Bangued, Abra, 20 miles; total, 105 miles. Telephone lines in operation are as follows: Bangued, Abra, to San Jose, Abra, 15 miles; Laoag, Ilocos Norte, to Dingras, Ilocos Norte, 15 miles; Laoag, Ilocos Norte, to Bangui, Ilocos Norte, 40 miles; total, 70 miles. The total number of miles of telegraph and telephone lines in the district amount to 362. Between the constabulary post of Bagnotan, Union, and San Fernando there is now in operation a system of Russell cut-in telephones used on the main telegraph line with condensers, thus doing away with the necessity of building an extra line.

On July 21, 1903, the following telegraph offices were in operation in this district: San Fernando, Union, with branch offices at Santo Tomas and Naguilian; Baguio, Benguet; Candon, Ilocos Sur; Vigan, Ilocos Sur. Since that time the following offices have been opened: Laoag, with branch offices at Currimao and Badoc; Bangar, Union (branch of San Fernando); Bangued, Abra; Cabugao, Ilocos Sur; Narvacan, Ilocos Sur (branches of Vigan); San Esteban, Ilocos Sur; Cervantes, Lepanto-Bontoc (branches of Candon). The branch offices are all in the hands of native operators.

In each province linemen are detailed from the enlisted force at a salary of 25 pesos, and are stationed at the most advantageous places for the quick repair of lines. These men make trips over their entire section at least once a week during fair weather, and immediately after each storm. American linemen are stationed at San Fernando de La Union, Vigan, Ilocos Sur, and Laoag, Ilocos Norte, and have supervision over the repairs of lines in their respective provinces.

On the evening of February 7 the constabulary garrison at Vigan mutinied, fired at officers, looted the commissary and cuartel, and left town at once in a body, cutting all telegraph lines at edge of town. The following morning, February 8, these breaks were repaired and the Bangued, Abra, and Laoag lines came O. K., but the Dagupan line still remained open. As no escort could be secured it was impossible to order either American or native linemen out (all native operators and linemen remained loyal), but on the following morning, February 9, Lineman Lee Bartlett took the native lineman from Cabugao and the two from Vigan and started south. The renegades were then reported to have just left Santa Maria (after looting the place) and were moving south. The wire was found cut at the Abra River and was repaired, but found to be still open south. Another cut was discovered just north of Narvacan, and when repaired wire came O. K. to Dagupan.

In passing through Narvacan the renegades disconnected the instruments, but did not break them. The revolver of the lineman was taken, but the operator was not molested.

Operator Bernardo Villanueva left his post at San Esteban when the detachment was picked up by the coast-guard cutter *Negros*, February 8, and when the renegades reached there they disconnected the instruments and broke up the batteries.

When the Candon detachment was picked up by the *Negros* on the same date Corporal Abella stayed at his office and did not come with them.

Bartlett picked up the Narvacan lineman on passing through that place, and his party now consisted of 5, including himself. It was not known at that time where the renegades were, but it was thought they were near Candon, on the main road. He spent the night of February 9 at Santa Maria, where he was found about 4 a. m. by a party of constabulary officers and American volunteer deputy sheriffs under Captain Hendryx.

As I was in this party I opened a temporary station, the morning of February 10, at Santa Maria, and we stayed there during the day, Captain Hendryx's party guarding the trail leading into Lepanto-Bontoc Province, and also keeping the renegades from returning north (troops having arrived at Candon and Bangar).

I closed the temporary office at Santa Maria the morning of February 11 and we moved on to Candon, arriving there at 1 p. m. Later in the afternoon it was reported that renegades were on the main road south of Santa Cruz, moving south. I took detachment of linemen and went to Santa Cruz at once, where I found Lieutenant Harris with company of scouts. Opened temporary office and expected to remain there until arrival of Colonel Scott. I soon learned, however, that Colonel Scott had passed there on the coast-guard steamer that afternoon for Candon. As the office at Santa Cruz was apparently of no further use I returned to Candon the morning of the 12th, taking with me 11 prisoners and 9 guns that Lieutenant Harris turned over to me. During the day I heard that Colonel Scott again wished the office opened at Santa Cruz, so I sent Corporal Abella, from Candon, down, and took charge of the Candon office myself.

February 13 Colonel Scott wired that Operator Malana, at Tagudin, was not doing satisfactory work and that he wished Corporal Abella sent there to assist him. The office at Santa Cruz was therefore closed and Corporal Abella sent to Tagudin. Lineman Bartlett was then sent to Santa Maria to open an office, as there was a movement of the renegades reported near that place and a force had been sent there to intercept them.

Civilian Operator Wilson reported to me at Candon for duty February 14, and on the following day I left for Vigan.

As Colonel Scott wished the office kept open at Santa Maria for a few days, Operator Constancio Navarro was sent there to relieve Bartlett, February 16.

The troops having abandoned Tagudin, Corporal Abella was ordered to report for duty at Vigan, leaving Operator Malana in charge at Tagudin.

I wish to state that the act of Lineman Bartlett in starting out on the morning of February 9 to repair the line with only 2 native linemen as assistants was very commendable. It was not known at the time whether the revolutionary movement was general or not, nor was it known where the renegades were in camp. He had volunteered to start out on the night of the 8th at 11 p. m., but as the native linemen failed to put in an appearance

at the appointed hour, the start was postponed until the following morning. No escort could be furnished him, as only the Americans were left in Vigan to guard the town. The constabulary soldiers who came back the morning after the mutiny were not trusted.

All lines have been working in a satisfactory manner, except the branch line from Candon to Cervantes, Lepanto-Bontoc, which is continually giving more or less trouble on account of the difficulty of getting iron poles, cross arms, insulators, etc., into that country. Iron poles are now at Candon and will be put in service on this line at the earliest possible date. The typhoon on the night of June 25 carried away 1 mile of wire and poles and broke communication in several other places. The entire available force of linemen is at work reconstructing temporarily until such time as the iron poles can be placed.

The telegraph line to Bangui has been completed and a telegraph office installed at Bangui, with native operator in charge. This, with telephonic communication to Cape Bojeador, gives communication from Manila to the northern part of Luzon Island.

The wooden poles on the branch line from San Fernando de La Union to Baguio, Benguet, are being replaced by iron poles. To date, iron poles have been installed as far as Naguilian, Union, this work having been stopped for an interval of two months, during the stay of the civil commission at Baguio, on account of the increase of work over this wire during the commission's stay; continued work of replacing wooden poles would too frequently interrupt communication. The work will be rapidly pushed to completion. With the work of replacing wooden poles for iron completed on the San Fernando-Baguio and Candon-Cervantes lines, this will only leave a portion of the Vigan-Bangued line to be replaced with iron poles, and with this completed all lines in the district will be on iron poles, except the line from Cervantes to Bontoc, which will not be reconstructed, as wooden poles are best suited for that line.

Native operators in this district, with one or two exceptions, are giving satisfaction. All substations that do not check direct are being changed as rapidly as possible to "check-direct stations," the native operator in charge making all monthly reports. To date, Bangued, Abra; Baguio, Benguet; Cervantes, Lepanto-Bontoc, and Bangar, Union, have been changed to check stations, all the above named being in charge of native operators. Smaller stations, such as Narvaca, Ilocos Sur, and Rabon, Union, do not handle enough commercial business to justify the change from sub to check station.

At present there are on duty in this district 4 civil operators and 3 civil linemen, all American; native operators, 2 sergeants, 3 corporals, 7 first-class privates, and 11 second-class privates; constabulary soldiers, detailed as linemen, 3 in Ilocos Norte, 4 in Ilocos Sur, 3 in Union, 1 in Bangued, 1 in Cervantes, and 1 in Benguet; 1 civil native lineman stationed at Vigan; 2 native civil messengers at Vigan and Candon. At other stations where there is a constabulary garrison soldiers are detailed for messenger duty.

The Vigan telegraph school has been closed for the present, but before closing the entire class was examined by Third-Class Inspector C. M. Sides, telegraph division, and 14 of the class successfully passed the examination. Although the school is closed, the 14 students who passed the examination are available and willing to enlist in the telegraph division at any time, the address of each being on file in this office.

Respectfully submitted.

L. B. MANCHESTER,
District Telegraph Officer.

The FOURTH DISTRICT CHIEF, PHILIPPINES CONSTABULARY,
Vigan, P. I.

REPORT OF THE FIFTH DISTRICT, PHILIPPINES CONSTABULARY.

HEADQUARTERS FIFTH DISTRICT, PHILIPPINES CONSTABULARY,
Zamboanga, P. I., June 25, 1904.

SIR: The undersigned has the honor to submit report of conditions in this district and the organization and work of this constabulary from September 28, 1903, the date at which he assumed command of the fifth district pursuant to General Orders, No. 49, headquarters Philippines Constabulary, September 1, 1903, to the present time.

TERRITORY.

The district comprises Mindanao and the Sulu Archipelago, divided into Misamis and Surigao provinces, and the districts of Cottabato, Davao, Lanao, Sulu, and Zamboanga. This area exceeds that of Luzon, the distances to be traveled being far greater and the proportion of constabulary to area and population being much less than in any other constabulary district. Manila is more accessible from these headquarters than some portions of the district from each other. The coast line of the district approximates 2,000 miles. Communication is almost entirely by water: all trails lead inward from the coast instead of

along it, and the only wagon roads are those built by the army from Lake Lanao to the north and south sides of Mindanao. There is no probability of much use of land transportation for many years to come. In its capabilities for the cultivation of hemp, sugar cane, tapioca, coffee, tobacco, indigo, pepper, and similar products; in its unrivaled forest resources, including gutta-percha and rubber, and its fine climate, this district should prove the most attractive region in the whole archipelago for investment and settlement.

The Rio Grande Valley and that of the Agusan have no rival in the islands in extent or fertility, except in the Cagayan of Luzon. The fine hemp region of Davao district along the east coast is unsurpassed, but the northeast monsoon practically shuts off that coast from the world half of each year. No land under a tropical sun will have a better future than this district when good government and a knowledge of its splendid possibilities bring capital and immigrants to it.

PEOPLE, LANGUAGE, ETC.

The coast from Dapitan by the north and east around to Davao is settled by Visayans. The interior of the Davao district and the mountainous part of the Zamboanga district are occupied by pagan tribes. At Zamboanga there is a mixed population descended from deportados, Spaniards and Chinese, whose language is a corrupt Spanish. On Basilan Island there is a powerful tribe known as the Yaccanes. The balance of the population of the fifth district is Moro, whose religion is debased Mohammedanism. The language when written is in Arabic characters. An occasional chief can read and write, but such work is usually done by Arab and Malay hadjis, who have settled among the Moros and wield much influence, seldom for good. In 1899 Sawyer said of Mindanao:

"The present condition of the island is most lamentable. Nothing could be more dreadful; robbery, outrage, and murder are rampant. Every evil passion is let loose and the labor of years has been lost.

* * * * *

"In the words of one who knows the country well, Mindanao has become a seething hell, and is in a condition more dreadful than ever before in historic times."

So much of the foregoing continued to be true that one is warranted in saying that probably few governments have been confronted by more difficult conditions than that of the Moro Province, created by Act 787 of the United States Philippine Commission. The legislative council of the Moro Province has since last September provided for a public school system; established many municipalities; enacted a municipal code for its province; regulated the sale of intoxicants; protected by legislation some of the peculiar products of this region, such as pearl shells; enacted a land-tax system; established a tribal ward system of government by district governors among the non-Christian tribes until such time as local self-government shall be created among them, and has forbidden the slave traffic. The tribal wards have been defined, the headmen are accepting their offices, and these Mohammedan and heathen people seem marching forward with reasonable rapidity toward order and settled conditions. There is slavery among them, but its extent and its evils have been greatly exaggerated. Throughout the Philippines, and perhaps in many parts of the world, the more intelligent native obtains a hold over the laborer which places the latter in a condition of servitude which is moral if not actual slavery. This exists along the east coast of Mindanao, and there and among the Moros has been extended, human beings being bartered and sold instead of being passed from owner to owner on the covert payment of an alleged indebtedness of the slave. The operation of the slavery law has not met with much resistance, except as it has been viewed by some of the Moro chiefs as the beginning of a general invasion of their ancient customs. Slavery of one Moslem by another is forbidden by the Koran, so that its influence can be invoked where the slavery is not of non-Mohammedans. The open traffic has practically stopped. The complete eradication of slavery will take many years. As the peculiar institution of villanage survived the passing of the feudalism of the Middle Ages and traces of it lingered in England until the days of the Stuarts, it is probable that the slavery now existing among the Moros as a part of their rude feudalism will endure for several generations. The slavery law has been generally disseminated, but with full knowledge of it many persons held in bondage prefer to remain there, although assured of protection if they leave their owners. The whole district is quiet now except for Datu Ali and a small band of his followers in the Rio Grande Valley. The death of Panglima Hassan in Jolo ended active opposition to progress there. The murders around Lake Lanao seem more due to savagery than any rebellion against law. The Taraca expedition has brought new and friendly chiefs into prominence in that region and the prospect is more promising than ever before. In the Rio Grande Valley in March, Datu Ali, a scion of the ancient Moro house of Kudarangan, organized at Srenaya the most formidable coalition against the government yet headed by any Moro. Related to the principal Moro nobility of the valley, with a prestige as a fighting man dating back into the early nineties, Ali's influence brought together several thousand warriors in an exceedingly well-chosen position, fortified with considerable engineering skill. This opposition was disintegrated by the Srenaya expedition, and a later one in the Lake Buluan region, and Ali, while still at large, is to-day dis-

credited among his own people, a fugitive with few followers, and his apprehension is only a question of time. As a strong factor against progress he has disappeared.

The so-called Moro problem is to be solved now by time and patience, firmness and square dealing. There has been considerable friction along the east coast of Mindanao, the shrewder Visayan taking commercial advantage of his pagan or Moslem neighbors, and native officials abusing their power. In Misamis bands of fanatics have several times begun organization, but the constabulary have been able in each case to prevent trouble. There have been some abuses by native officials along the west shores of Iligan Bay, in Misamis Province, and trouble between Roman Catholic authorities and the adherents of the Aglipay church has occurred in one or two places. A few cases of slave stealing by Moros from the Lanao district have occurred, but good work by constabulary officers of Misamis has restored the captives and apprehended the raiders in each case reported. In Surigao general quiet has prevailed. Adriano Concepcion was captured by constabulary in April, and the hanging of four of his companions in the raid last year and his own death sentence ends general outlawry in Surigao. Slight friction in Surigao Province has occurred between Roman Catholics and Aglipayanos, but nothing serious. A very disastrous hurricane on April 23 destroyed crops and damaged towns along the east coast of Surigao, necessitating a distribution of rice in return for labor, in order to prevent suffering.

THE CONSTABULARY.

The undersigned on his arrival here reported to the governor of the Moro Province and was informed by the latter that he did not desire a constabulary organized for the present in the Lanao and Cottabato districts nor on the island of Jolo. As under Act 787 of the Philippine Commission the governor may control the use and direct the movements of the constabulary of the Moro Province, this statement was considered sufficient authority for deferring, as far as those districts are concerned, the organization of the constabulary directed to be made by section 21 of the act referred to. Within the last thirty days, however, the governor has asked that constabulary be organized in those districts as soon as possible, and the matter only awaits the assignment of officers by the chief of constabulary to proceed with speed. Enlistments in the districts organized have been principally of Mohammedans and pagans. The illiteracy of these has made it necessary to secure a few Christians in each district, and in Zamboanga the Moslem and Christian have been enlisted in about equal proportions. For a time it was supposed that the well-known dislike of the Moro to eat with the Filipino, a feeling which is reciprocated with interest, was unconquerable, but the experience of eight months shows that Moslem, pagan, and Christian amalgamate with but little friction. Separate messes have been abolished. Tribal lines are disappearing, the loyalty to his new corps and white officers replacing the allegiance paid by the Moro to his hereditary datu for many ages. The objection of the Islam to a hat with a brim was met by the authority of the chief of constabulary for the use in the Moro Province of a red fez with black tassel. The Moro is proud to wear that, and the result is a very smart and attractive uniform. The Filipino acquires military instruction more quickly than the Moro or pagan, having seen more of Spanish and United States soldiers, but in the opinion of the undersigned has not the seriousness, force, or physique of the Moro—an opinion not dissented from by any constabulary officer on duty in the Moro Province.

The Moro soldier is quiet, contented with his fare and surroundings, anxious to learn and please his officers, and will be true to the government that feeds and pays him. Cottabato Moros enlisted last autumn for the constabulary of Zamboanga are now on duty among their own people, self-respecting, proud of their uniform and newly acquired bearing, and it is believed happy in their emancipation from the old ties.

At the date of this report Moros of the constabulary are in the field accompanying expeditions after Datu Ali in the Cottabato district, and against the Sultan of Masibay in the Lanao district, and rendering loyal service against people of their own blood and religion.

Not a few of the Moros who have enlisted were slaves who realized that the ranks of the constabulary offered the best protection against former masters. The absolute illiteracy of the Moro and pagan will be the greatest drawback to their usefulness. Less than half a dozen of those now in service can read and write. Schools to teach them are in progress at every station, and the legislative council of the Moro province has facilitated this by authority of the superintendent of schools to recognize our schools as on a footing with all others in the province in the matter of supplies, etc., a resolution for which the constabulary is indebted to the good offices of Supt. N. M. Saleeby. The influence on these people of the constabulary among them will be one of the most potent aids to their civilization. The Moro, Bagobo, Manobo, Mandaya, Tiruray, etc., who exchanges his breech clout and spear for the khaki and carbine becomes a marked man among his race, is eagerly questioned at every opportunity as to his arms, clothes, food, and treatment, and every soldier thus becomes to his own people a living evidence of the fulfillment of governmental promises; for his government an advance agent and advocate; and to himself an individual who has taken the upward step to better things.

along it, and the only wagon roads are those built by the army from Lake Lanao to the north and south sides of Mindanao. There is no probability of much use of land transportation for many years to come. In its capabilities for the cultivation of hemp, sugar cane, tapioca, coffee, tobacco, indigo, pepper, and similar products; in its unrivaled forest resources, including gutta-percha and rubber, and its fine climate, this district should prove the most attractive region in the whole archipelago for investment and settlement.

The Rio Grande Valley and that of the Agusan have no rival in the islands in extent or fertility, except in the Cagayan of Luzon. The fine hemp region of Davao district along the east coast is unsurpassed, but the northeast monsoon practically shuts off that coast from the world half of each year. No land under a tropical sun will have a better future than this district when good government and a knowledge of its splendid possibilities bring capital and immigrants to it.

PEOPLE, LANGUAGE, ETC.

The coast from Dapitan by the north and east around to Davao is settled by Visayans. The interior of the Davao district and the mountainous part of the Zamboanga district are occupied by pagan tribes. At Zamboanga there is a mixed population descended from deportados, Spaniards and Chinese, whose language is a corrupt Spanish. On Basilan Island there is a powerful tribe known as the Yaccanes. Adriano Concepcion was captured by constabulary in April, and the hanging of four of his companions in the raid last year and his own death sentence ends general outlawry in Surigao. Slight friction in Surigao Province has occurred between Roman Catholics and Aglipayanos, but nothing serious. A very disastrous hurricane on April 23 destroyed crops and damaged towns along the east coast of Surigao, necessitating a distribution of rice in return for labor, in order to prevent suffering.

THE CONSTABULARY.

The undersigned on his arrival here reported to the governor of the Moro Province and was informed by the latter that he did not desire a constabulary organized for the present in the Lanao and Cottabato districts nor on the island of Jolo. As under Act 787 of the Philippine Commission the governor may control the use and direct the movements of the constabulary of the Moro Province, this statement was considered sufficient authority for deferring, as far as those districts are concerned, the organization of the constabulary directed to be made by section 21 of the act referred to. Within the last thirty days, however, the governor has asked that constabulary be organized in those districts as soon as possible, and the matter only awaits the assignment of officers by the chief of constabulary to proceed with speed. Enlistments in the districts organized have been principally of Mohammedans and pagans. The illiteracy of these has made it necessary to secure a few Christians in each district, and in Zamboanga the Moslem and Christian have been enlisted in about equal proportions. For a time it was supposed that the well-known dislike of the Moro to eat with the Filipino, a feeling which is reciprocated with interest, was unconquerable, but the experience of eight months shows that Moslem, pagan, and Christian amalgamate with but little friction. Separate messes have been abolished. Tribal lines are disappearing, the loyalty to his new corps and white officers replacing the allegiance paid by the Moro to his hereditary dato for many ages. The objection of the Islam to a hat with a brim was met by the authority of the chief of constabulary for the use in the Moro Province of a red fez with black tassel. The Moro is proud to wear that, and the result is a very smart and attractive uniform. The Filipino acquires military instruction more quickly than the Moro or pagan, having seen more of Spanish and United States soldiers, but in the opinion of the undersigned has not the seriousness, force, or physique of the Moro—an opinion not dissented from by any constabulary officer on duty in the Moro Province.

The Moro soldier is quiet, contented with his fare and surroundings, anxious to learn and please his officers, and will be true to the government that feeds and pays him. Cottabato Moros enlisted last autumn for the constabulary of Zamboanga are now on duty among their own people, self-respecting, proud of their uniform and newly acquired bearing, and it is believed happy in their emancipation from the old ties.

At the date of this report Moros of the constabulary are in the field accompanying expeditions after Datu Ali in the Cottabato district, and against the Sultan of Masibay in the Lanao district, and rendering loyal service against people of their own blood and religion.

Not a few of the Moros who have enlisted were slaves who realized that the ranks of the constabulary offered the best protection against former masters. The absolute illiteracy of the Moro and pagan will be the greatest drawback to their usefulness. Less than half a dozen of those now in service can read and write. Schools to teach them are in progress at every station, and the legislative council of the Moro province has facilitated this by authority of the superintendent of schools to recognize our schools as on a footing with all others in the province in the matter of supplies, etc., a resolution for which the constabulary is indebted to the good offices of Supt. N. M. Saleeby. The influence on these people of the constabulary among them will be one of the most potent aids to their civilization. The Moro, Bagobo, Manobo, Mandaya, Tiruray, etc., who exchanges his breech clout and spear for the khaki and carbine becomes a marked man among his race, is eagerly questioned at every opportunity as to his arms, clothes, food, and treatment, and every soldier thus becomes to his own people a living evidence of the fulfillment of governmental promises; for his government an advance agent and advocate; and to himself an individual who has taken the upward step to better things.

There have not been lacking evidences from district governors of the Moro province of what Governor Taft described in an indorsement of September 10, 1902, to the chief of constabulary, as "a feeling of irritation concerning the constabulary which is natural in view of the independence of command which the constabulary have under the law." In that province where the governors are all Americans, and the people governed are nearly all savages accustomed to the authority of patriarch or chief, it has been found necessary to subordinate that independence. Naturally in a savage country acquainted with the title governor, and where constabulary have been unknown, complaints, reports of abuses, etc., flow to the district governors, the apparent fountain of authority, and redress afforded through the constabulary or not is credited to the same source. The constabulary here stands ready to bear its share of this burden, but whether or not it shall do so depends principally on the district governors whose plans and policies for the development of their people might readily be ruined by independent or ill-advised action of a constabulary, and who must choose whether they will throw this work to the force created by law to perform it. Since the establishment of this district the military have been withdrawn from Surigao and Misamis provinces, and in the Moro province from the stations of Tukuran, Misamis, Dapitan, Siasi, and Bongao, and the navy from Pollok and Isabela de Basilan, which have all been garrisoned by constabulary, not a small part of whose work here for many years will be as a moral force guaranteeing good order by its mere presence and exploration of the unknown regions which surround these remote stations. There is no ladronism or political agitation in this district after the manner of other parts of the archipelago, and he who should judge of the work being done and to be done here, by a bare comparison of arrests made, for example, with the restless Tagalog provinces, would argue himself ignorant of conditions here and the work required. A tabulation of the ordinary routine accomplished, to include May, is appended and marked "A." The strength of the district by tribes, stations, and provinces is tabulated in appendix marked "B."

In considering the work done in this district it is deemed proper to invite attention to the fact that all the districts of the Moro province are paid and supplied by the district supply officer and his assistant. This means a saving of three supply officers as compared to the administration of other provinces, not to mention storehouses, handling, etc., has worked satisfactorily, and the credit for it is due First Lieut. Frederick Johnson, Philippines Constabulary, district supply officer, whose industry and capacity have made it possible, and who has been without an assistant until May.

On the arrival of the undersigned in this district in September four companies of Philippine Scouts were on duty with the civil government in Mindanao. They were returned to the military early in October, the necessity for their retention with the civil government having passed.

The coast-guard launch *Ranger* was on duty in the district from September 28, 1903, to June 5, and steamed 15,987 miles, for the most part of which she carried the undersigned on visits of inspection. The services of this ship have been very satisfactory; the business of the district could not have been carried on without her. The launch *Troy* has been on duty in the district since April 6, and has steamed 5,214 miles. Two such vessels will be a continuing necessity in the district.

In the opinion of the undersigned, two great steps toward the efficiency of the constabulary have been taken in the last half year; one, the inauguration of a messing system, and the other, the establishment of a uniform system of instruction. The ration checks and other administrative machinery of the new messing system are admirable and testify to the possession of brains and their exercise by the officer who arranged it. Its working in this district has been eminently satisfactory, the cash allowance is ample, and with prompt honor to requisitions for funds on the part of the supply department, and senior inspectors held to their duty by district chiefs, can not fail to be a permanent success. The school order, like the messing system, depends somewhat on supplies for its success. In this district the illiteracy is such that much elementary instruction must be given, reading and writing necessarily preceding much that is prescribed in the school order. Here, too, the use of English in speaking to soldiers will be a great aid. Few of them know any Spanish, and there is no reason for them to learn it. The course of instruction prescribed from constabulary headquarters is excellent, and while progress under it, subject to the interference of many duties and a lack of supplies and teaching capacity on the part of officers will be slow, time is bound to show good results.

NEEDS OF THE DISTRICT.

The proportion of officers and noncommissioned officers necessary in this district is greater than that required where the natives are more civilized and soldiery less illiterate. Command of isolated posts can not be trusted to noncommissioned officers. There are too many tribal and race antipathies which, when properly handled by white officers, may even increase the efficiency of the constabulary, but when given rein in native hands might

bring shame to our corps. The crying need of the district thus far has been officers. Hardly a senior inspector has had an officer at his home station to keep up its administration and instruction while attending to the administration of his other territory, and efficiency has suffered. Noncommissioned officers should be continued in this district, as has been done by the chief of constabulary, in the ratio of a first sergeant, 5 sergeants, and 12 corporals to each 150 men. This allows the grade of first-class private to lapse. This proportion of noncommissioned officers is but half that which obtains in the constabulary of Borneo, which handles an identical people. It is believed that the public interest would be served if the law were amended to permit enlistments to be made outside the province or district in which the soldier is to be used. In trying to handle this population with soldiers selected from among them, we do not follow the lead of nations more experienced in the management of oriental peoples. In Borneo the Sikh, Cingalese, Filipino, Confucian, and Moro mingle in a force whose problem is similar to our own. In our frontier Indian wars men of one tribe were used as scouts against others, but seldom if ever against their own tribesmen. Members of our National Guard have on at least one occasion affiliated with the mob they should have confronted.

Sufficient water transportation is an essential to the administration of this district. Sailboats have been provided for the constabulary of Misamis, Davao, and Sulu. The chief supply officer has been asked to include in his estimate for the appropriation for the new fiscal year the purchase of two light-draft launches for use in Surigao and Cottabato. In each there is a great river, along which the constabulary has a great work to perform, and where a magnificent valley largely awaits the coming of the constabulary to take up the march of development under its protection. In neither the Agusan nor Rio Grande valleys will it be possible to station or maintain constabulary without water transportation. Not later than another year such launches will be needed in Sulu and Zamboanga. It is to be noted in this connection that animal transportation will never be needed in the great part of this district.

GENERAL RECOMMENDATIONS.

The appointment of a traveling dentist for each constabulary district would be a help to the health and efficiency of our officers and to the interest of the government. Within the short time this district has been organized, three officers have had to leave their stations for extended dental treatment, and have been robbed by exorbitant prices charged by army dentists.

The authorization of the employment by each senior inspector of a native clerk at not to exceed ₱35 per month, to attend to the burden of court work that falls on constabulary officers is recommended. For the constabulary administration routine no clerk is needed, but the work in connection with trials and prosecutions would seem to justify the employment of a clerk.

The uniform of the constabulary in appearance leaves little or nothing to be desired. The quality of certain articles is poor. The tan shoes do not stand wear even in stations. The undersigned has seen a pair of them wear out in two days in rough traveling. The hemp-soled sandal is a good thing, but accumulates trash and gravel in its open top. It should have a bellows tongue and lace to the ankle. Woolen khaki-colored puttees worn in this district give excellent satisfaction. They are more durable than canvas leggings, look better and are more comfortable, and the cost is but little greater. Their adoption for the entire constabulary is suggested. An increase of clothing allowance and rearrangement of periods of settlements is recommended. In the opinion of the undersigned the uniform should not be chosen entirely on lines of utility, especially with oriental peoples. No soldiers will respond more quickly to efforts for "smartness" than our constabulary; that is a thing to be encouraged. Much of the soldier's influence among his own people will depend on the appeal to the eye, the dressiness of his garb, which at least in the Moro land means bright colors. The smartness of this constabulary uniformed for the field, with red fez, puttees, khaki trousers, dark-blue shirt, with red-blanket roll, has won praise from the commanding general of the department and other military men. The passing of the red blanket is a matter of regret to the undersigned, for the invisibility of the new issue will never compensate the Moro soldier for the loss of the dressed-up feeling it gave him to carry the red one.

It is believed that a knowledge of the vernacular of his region by every inspector should be a requisite to the retention of his position. It should be necessary to his promotion, and a monetary regard should be paid for proficiency. At the same time in regions where the constabulary soldiers know little Spanish all conversation with them should be held in English. Not knowing Spanish, they should not be made to learn it, as is now the tendency. The observation of the undersigned leads him to believe that examinations for payments of a bonus for learning native dialects to ascertain fitness for appointment on original entry into the constabulary and to determine the promotions of officers should be held by the civil-service board. Examinations conducted by brother officers are not very seriously

considered, either in the United States Army or the constabulary. They should be serious matters; eliminate the unworthy, and indicate our best material for promotion.

There is no question which so vitally touches the present and future of the constabulary as the question of more pay for its officers. Scarcely one among them whose services are worth retention but has been tempted by offers from civil life or from other branches of the insular government. Some remain with us for love of the life, others from a hope of assured permanent position at good pay, but in the end to retain these men and obtain others that will do the work the standard of pay must be raised. Officers now work over clerks that are better paid; supply officers are expected to have the honesty and ability that everywhere else in the world commands a good price, and many of our officers are actually put to shame by their poverty. Brains and integrity are commodities, and they can not be bought of first rate quality at second or third rate prices.

Respectfully submitted.

J. G. HARBORD,

Assistant Chief Philippines Constabulary, Commanding District.

**ANNUAL REPORT OF THE CHIEF OF THE BUREAU OF COAST
GUARD AND TRANSPORTATION FOR THE FISCAL YEAR ENDING
JUNE 30, 1904.**

BUREAU OF COAST GUARD AND TRANSPORTATION,
Manila, P. I., August 22, 1904.

SIR: I have the honor to make the following report concerning this bureau's operations during the fiscal year ended June 30, 1904:

The bureau still consists of three divisions, namely, division of light-house construction, division of light-house maintenance, and division of vessels.

At the beginning of the year the organization was as follows: J. M. Helm, commander, U. S. Navy, chief of bureau; Henry Jervey, captain of Engineer Corps, U. S. Army, superintendent of the division of light-house construction; A. Franklyn, superintendent of the division of light-house maintenance; Wm. Howe, superintendent of the division of vessels; D. D. Wilson, inspector of machinery; 1 chief clerk, class 5; 1 chief property clerk, class 6; 1 disbursing officer, class 6; 1 pay officer, class 6; 1 clerk, class 7; 1 draftsman, class 7; 4 clerks, class 8; 5 clerks, class 9; 1 storekeeper, class 10; 1 storekeeper, class A; 3 clerks, class A; 2 assistant storekeepers, class F; 1 clerk, class J; 3 employees, at \$180 United States currency per annum; 5 employees, at \$150 United States currency per annum.

By authority of Act 1049 an additional class 7 clerk was employed, and a mechanic, class 9.

On August 12, 1903, Capt. Spencer Cosby, Corps of Engineers, U. S. Army, relieved Capt. Henry Jervey as superintendent of light-house construction.

On September 24, 1903, Mr. D. J. Curran succeeded Mr. D. D. Wilson as inspector of machinery.

On March 8, 1904, Mr. Frank P. Helm succeeded Mr. Wm. Howe as superintendent of the division of vessels.

In order to conform to titles for similar offices in the United States, and for the sake of brevity, the titles of the different superintendents of the divisions were, by act of the Commission, recently changed to "light-house engineer," "light-house inspector," and "marine superintendent."

FLEET.

The fleet of the bureau consists of 15 single-screw 148-foot steamers, built at Shanghai, China; 2 twin-screw 140-foot steamers, built at Uruga, Japan; steam launches—*Ranger*, length 110 feet; *Rover*, 99 feet; *Pittsburg*, 93 feet; *Troy*, 86 feet; *Picket*, 102 feet; *Leader*, 78 feet; stern-wheel river steamer *Sentinel*, 90 feet; 6 river and harbor launches in use around Manila, ranging from 20 to 80 feet in length; the 25-ton sailing sloop *Jervey*, used by the light-house construction division in connection with working parties.

considered, either in the United States Army or the constabulary. They should be serious matters; eliminate the unworthy, and indicate our best material for promotion.

There is no question which so vitally touches the present and future of the constabulary as the question of more pay for its officers. Scarcely one among them whose services are worth retention but has been tempted by offers from civil life or from other branches of the insular government. Some remain with us for love of the life, others from a hope of assured permanent position at good pay, but in the end to retain these men and obtain others that will do the work the standard of pay must be raised. Officers now work over clerks that are better paid; supply officers are expected to have the honesty and ability that everywhere else in the world commands a good price, and many of our officers are actually put to shame by their poverty. Brains and integrity are commodities, and they can not be bought of first rate quality at second or third rate prices.

Respectfully submitted.

J. G. HARBORD,

Assistant Chief Philippines Constabulary, Commanding District.

A building 250 feet long is in process of construction and should be completed early in the fall. Two-thirds of it will be used for a machine shop and the other third as a warehouse for the division of vessels. Temporary offices will probably be established on upper floor of this warehouse.

The insular purchasing agent has established a coal pile on this island for the use of coast-guard vessels, and what is known as the inner basin has been dredged out in part to allow the coast-guard vessels under repair to enter and moor in safety during the typhoon seasons.

The mud dredged out of the inner basin and also between the walls where the marine railway is under construction has been used for filling in the low part of the island, and in this way quite a valuable piece of ground has been partly reclaimed. It will be necessary to fill in with sand and gravel over the top of the mud to complete this job, however.

Water pipes have been laid across the canal and along the island, connecting with the city water supply, and water tanks are in process of construction. The water arrangements up to the present time, however, have not been altogether successful. An artesian well, in addition to the present city water supply, is under consideration.

The alteration of old buildings, construction of new buildings, laying of water pipes, etc., are in charge of the bureau of architecture.

A system of tramways and derricks, of sufficient capacity to hoist in and out ordinary sized boilers, is under consideration.

Coal sheds and an office building, etc., will be eventually required, but their construction will be delayed until more pressing work has been completed.

It is hoped that in the course of time the government will provide a new detention camp for Chinese, and that the old camp located on the pier on the south side of the mouth of the Pasig River will be removed and this pier left unobstructed, so that pilots of boats entering or leaving the river will be able to see across the pier, and thus materially reduce the risk of collision at the mouth of the Pasig.

Reports of the light-house engineer, Capt. Spencer Cosby, and Assistant Engineer W. H. Robinson, showing progress made in construction of Marine Railway, are appended.

COAL.

The insular purchasing agent proposes consolidating the coaling stations, and contemplates keeping piles only at Manila, Romblon, Iloilo, Cebu, Tacloban, Zamboanga, and Jolo. It has been recommended, however, that a small supply be kept also at Aparri, San Fernando de Union, or other place on Lingayen Gulf, and Balabac.

At Liguán, Batan Island, a coal deposit, now in process of development by the government, may prove valuable. The coal has already been tested by our steamers with very satisfactory results. "Coal Harbor" (the name given to the harbor where this coal is loaded) is reported to afford good anchorage and shelter in all kinds of weather. If everything is successful, this will prove to be a most valuable coaling station for the vessels operating on the eastern coast of Luzon or vicinity.

Two of the cutters (the *Corregidor* and *Romblon*) and the launch *Picket* have been equipped for and are operated as light-house tenders.

The cost of maintenance and operation of the cutters is about \$28,000 gold per annum each; of the seagoing launches, about \$15,000 gold per annum each, and of the harbor launches, from \$1,500 to \$7,500 gold per annum each, according to size.

Actual figures for running each vessel during the fiscal year 1904 may be seen in attached reports of the marine superintendent and the light-house inspector.

SUMMARY OF BUREAU EXPENDITURES.

The actual expenses of the bureau from July 1, 1903, to June 30, 1904, were:

Salaries and wages and contingent:	
Expenses of offices.....	₱ 81,443.91
Construction and equipment of vessels.....	1,808,244.75
Construction and equipment of marine railway and machine shops....	65,521.70
Light-house construction division:	
Repairs of old light-houses.....	₱ 30,641.77
Construction of new light-houses.....	198,144.53
	228,786.30
Light-house maintenance division: Maintenance of light-houses and maintenance and repair of light-house tenders, buoys, beacons, etc.....	215,240.65
Division of vessels: Maintenance and operation of cutters and launches....	1,217,448.69
Total.....	3,616,686.00

ENGINEER ISLAND.

At the beginning of the fiscal year Engineer Island had been transferred to the bureau of coast guard and transportation to be used as a dock yard, and an expenditure of \$140,000 for the building of a marine railway and the purchase of machinery and tools for machine shop authorized.

Along about January 1, 1904, a few machines and tools, such as could be collected in Manila, were purchased and temporary shops started in some of the old sheds found on the island. With these tools work to the extent of ₱20,678.43 has been done for the division of vessels, and to the value of ₱9,304.04 for other divisions of the bureau and other branches of the government. For the division of vessels this amount is figured at cost price of labor and material, and to the actual cost of labor and material 10 per cent has been added and charged for the work done outside of the division of vessels to cover wear and tear on the plant.

Mr. D. J. Curran, inspector of machinery, has charge of these shops and deserves credit for the economical and practical way in which he has performed work with the few facilities available.

On February 4, 1904, contract was entered into with the Atlantic, Gulf and Pacific Company for the construction of a 1,400-ton marine railway, at a cost of \$104,900 United States currency, to be completed by December 15, 1904, and it looks now as though the contractors would fulfill the agreement satisfactorily.

Alterations to existing buildings to make warehouses for the two divisions of the light-house service are practically completed and the light-house construction division has already moved in. The division of light-house maintenance has partly moved in.

A building 250 feet long is in process of construction and should be completed early in the fall. Two-thirds of it will be used for a machine shop and the other third as a warehouse for the division of vessels. Temporary offices will probably be established on upper floor of this warehouse.

The insular purchasing agent has established a coal pile on this island for the use of coast-guard vessels, and what is known as the inner basin has been dredged out in part to allow the coast-guard vessels under repair to enter and moor in safety during the typhoon seasons.

The mud dredged out of the inner basin and also between the walls where the marine railway is under construction has been used for filling in the low part of the island, and in this way quite a valuable piece of ground has been partly reclaimed. It will be necessary to fill in with sand and gravel over the top of the mud to complete this job, however.

Water pipes have been laid across the canal and along the island, connecting with the city water supply, and water tanks are in process of construction. The water arrangements up to the present time, however, have not been altogether successful. An artesian well, in addition to the present city water supply, is under consideration.

The alteration of old buildings, construction of new buildings, laying of water pipes, etc., are in charge of the bureau of architecture.

A system of tramways and derricks, of sufficient capacity to hoist in and out ordinary sized boilers, is under consideration.

Coal sheds and an office building, etc., will be eventually required, but their construction will be delayed until more pressing work has been completed.

It is hoped that in the course of time the government will provide a new detention camp for Chinese, and that the old camp located on the pier on the south side of the mouth of the Pasig River will be removed and this pier left unobstructed, so that pilots of boats entering or leaving the river will be able to see across the pier, and thus materially reduce the risk of collision at the mouth of the Pasig.

Reports of the light-house engineer, Capt. Spencer Cosby, and Assistant Engineer W. H. Robinson, showing progress made in construction of Marine Railway, are appended.

COAL.

The insular purchasing agent proposes consolidating the coaling stations, and contemplates keeping piles only at Manila, Romblon, Iloilo, Cebu, Tacloban, Zamboanga, and Jolo. It has been recommended, however, that a small supply be kept also at Aparri, San Fernando de Union, or other place on Lingayen Gulf, and Balabac.

At Liguán, Batan Island, a coal deposit, now in process of development by the government, may prove valuable. The coal has already been tested by our steamers with very satisfactory results. "Coal Harbor" (the name given to the harbor where this coal is loaded) is reported to afford good anchorage and shelter in all kinds of weather. If everything is successful, this will prove to be a most valuable coaling station for the vessels operating on the eastern coast of Luzon or vicinity.

VESSEL REPAIRS AT CAVITE NAVY-YARD.

The United States navy-yard at Cavite has continued aiding us in making vessel repairs at cost price, as far as the needs of the naval service would permit. This bureau is especially under obligations on that account to Capt. A. R. Couden, U. S. Navy, commandant, and other officers of the navy-yard for many courtesies shown.

VESSEL REPAIRS AT CAÑACAO.

An agreement has been reached with El Varadero de Manila for the docking of our vessels at Cañacao and the performing of such work as may be found necessary. The following vessels have been docked for the bureau by that company during the year: *Negros*, *Corregidor*, *Polillo*, *Rover*, *Tablas*, *Mindanao*, *Basilan*, *Marinduque*, *Luzon*, *Romblon*, *Leyte*, *Masbate*, *Busuanga*, *Samar*.

SHAFTS OF SHANGHAI CUTTERS.

On December 16, 1903, while off the Zambales coast near Santa Cruz, the *Mindanao's* tail shaft broke and her propeller was lost.

No great alarm was felt about this. It was thought at the time that likely the trouble was due to a flaw and not to poor material and workmanship being used in the manufacture of all the Shanghai cutter shafts.

On April 1, 1904, while off Catanduanes Island, the *Leyte's* propeller dropped off.

On April 17, 1904, off the coast of Negros Oriental, near Dumaguete, the *Busuanga's* propeller dropped off.

On April 30, 1904, when near Calapan, Mindoro Province, the *Masbate's* propeller dropped off.

Fortunately all these shafts broke when the weather was fair and the sea smooth. The damage done was not serious beyond the actual loss of the money value of the propellers and shafts.

All four shafts broke short off near the propellers, and it was found that the metal was poor, containing flaws, and that propellers and shafts were poorly fitted together. It is thought that all other Shanghai cutters should be docked at the first opportunity and have their propellers and shafts closely examined. The *Samar*, *Luzon*, and *Negros* were docked, and an examination showed the necessity of replacing tail shafts, which was done.

The Philippine government still holds a guarantee check of Messrs. Farnham, Boyd & Co., for \$30,000 United States currency, pending settlement of claims against them. There are also unpaid bills rendered by Farnham, Boyd & Co., aggregating about \$4,000, which will not be paid until all controversies between that firm and the Philippine government are satisfactorily adjusted.

DIVISION OF LIGHT-HOUSE CONSTRUCTION.

The division of light-house construction was originally organized by Capt. Henry Jervoy who, when he came to the bureau in the spring of 1902, found absolutely nothing except the wrecks of the Spanish light-houses, which had been neglected for the previous six years, and few facilities to draw from either in the way of material or

personnel. Captain Jervey, after more than a year's arduous and ceaseless labor, had gotten things into as good shape as possible with the means available, when he was relieved by Capt. Spencer Cosby, who has carried on the work of organization and building in a manner to be expected from an officer of the Corps of Engineers, U. S. Army.

Captain Cosby's report is attached hereto.

DIVISION OF LIGHT-HOUSE MAINTENANCE.

This division has carried on the ordinary routine of inspecting and supplying various light-houses already in operation, and equipping and providing for the others as fast as completed by the division of light-house construction. This department has also had charge of the personnel, and labored to perfect the organization of the light-house keepers, and for the education of apprentices to supply waste and to fill new positions as the light-house establishment increases.

The three light-house tenders were in charge of the light-house inspector, and have transported all the construction material and supplies for both divisions of the light-house establishment.

This division also has charge of the placing of buoys, and their care and preservation.

The division still remains in charge of Capt. Alexander Franklyn, who seems to have mastered the duties of a light-house inspector, and has brought his division up to a very satisfactory state of efficiency.

The remarks made about the personnel of officers of the division of vessels apply to the light-house tenders also.

As to the Filipino light keepers, of whom we have more than 100, I would like to say that in many instances they are responsible for a great deal of government property and for the care and preservation of delicate, intricate, and expensive machinery; also that they have considerable office work to perform in the way of accounts and returns; and at first, second, third, and fourth order light stations have the control and administration of quite extensive establishments, many of which are comparatively isolated and can not be visited frequently. The manner in which they have met their responsibilities and performed their duties seems to me creditable.

Attention is invited to the report of Capt. A. Franklyn, light-house inspector, inclosed herewith.

DIVISION OF VESSELS.

This division controlled, on July 1, 1903, 11 cutters, 3 seagoing launches, the stern-wheel river boat *Sentinel* on the Rio Grande de Cagayan, and 5 bay and river launches.

It received later the following vessels: Cutters: *Mindanao*, received from Shanghai August 21, 1903; *Mindoro*, September 18, 1903; *Samar*, September 18, 1903; *Leyte*, October 3, 1903; *Panay*, October 6, 1903. Seagoing launches: *Pittsburg*, from Misamis Province, July 20, 1903; *Troy*, from Cebu Province, January 12, 1904. Harbor launches: *Cuyo* (*Basilan*), from district of Isabela, October 26, 1903; *Leader*, from Sorogon Province, June 12, 1904.

The seagoing launch *Scout* was driven ashore at Pandan, Antique Province, by a typhoon on the night of June 23, 1904, and became a total wreck. She was purchased about two years ago for the sum of \$31,500 Mexican currency. Her measurements were: Length, 100 feet; breadth, 17 feet; and draft, 9 feet.

PERSONNEL OF THE FLEET.

The personnel of the fleet still consists of American officers (or European officers who have taken the oath of allegiance) and Filipino petty officers and crews. It must be understood that when the Philippine government collected so many vessels in a short time a sufficient number of desirable men could not be secured immediately, and owing to that fact it was necessary to take almost such as applied, but during the year there has been a gradual weeding out, and it is thought that a marked improvement has been made in both classes. It is hoped to still further increase the efficiency of the officers by slight increases of the pay of first officers, second officers, and assistant engineers.

Many and frequent changes in crews occurred during the earlier stages of organization, but there has been steady improvement in this respect, and the crews now seem to be very well satisfied as a rule, and disposed to remain more or less permanently. To accomplish this it was necessary to get the voluntary assent of the Filipino, as no rules of enlistment or contracts can hold a Filipino sailor when he gets ready to leave. At present, changes among the crews are comparatively few.

It is thought that under these circumstances officers and crews have done very well, and that they should be credited with a record of having very few accidents, and that the service is as good as could be expected. To their credit it must also be said that coast-guard vessels are required to go into many unfrequented places, often where there have been no surveys.

VESSELS ON ROUTES.

The routes over which vessels run regularly have been modified as found necessary, and additional routes added. At the end of the fiscal year the routes are 11 in number, as follows:

[No. 1.—Headquarters at Manila.]

Boat to leave on the 1st and 15th of each month for San Fernando, Candon, San Esteban, Vigan, Salomague, Laoag, and Aparri; returning via same route. Will also visit Capones Island and Cape Engaño light-houses when necessary, while on regular trips.

[No. 2.—Headquarters at Manila.]

Boat to leave on the 1st and 15th of each month for Batangas, Lucena, Boac, Pasacao, Sorsogon, Calbayog, Cathalogan, Tacloban, and Surigao; returning via same route. Will stop at Cananay light-house when necessary.

Will stop at San Pascual each trip on the way back to Manila, and will stop there on the way south when necessary.

[No. 3.—Headquarters at Manila.]

Boat to make alternate long and short trips, with from 15 to 20 days between sailings.

Long trip to Coron, Culion (Halsey Harbor), Cuyo, San Jose de Buenavista, Iloilo, San Jose de Buenavista, Cuyo, Puerto Princesa, Balabac, Cape Melville, Puerto Princesa, Cuyo, Culion, Coron, and Manila.

Short trip to Abra Island light, Coron, Culion, Cuyo, San Jose de Buenavista, Iloilo, San Jose de Buenavista, Cuyo, Puerto Princesa, Cuyo, Culion, Coron, and Manila.

When necessary will visit Luzaran light, Tinotian, Araceli, Agutaya, and Cagayancillo.

[No. 4.—Headquarters at Manila.]

Leave Manila about the 5th of each month for Lucena, Masbate, Sorsogon, Legaspi, Virac, Tabaco, Bicol River (for Nueva Caceres), Pandan, Daet, Atimonan, Mauban, Binangonan, Polillo, Kasiguran, Baler, Polillo, Binangonan, Mauban, Atimonan, Daet, Pandan, Bicol River, Tabaco, Virac, Legaspi, Sorsogon, Masbate, Lucena, and Manila.

[No. 5.—Headquarters at Iloilo.]

Sail on 1st day of each month for Bacolod, Escalante, Concepcion, Capiz, Romblon, Capiz, Calivo, Pandan, Bugasan, San Jose, San Joaquin, and Iloilo.

Sail on the 15th day of each month for Bacolod, San Joaquin, San Jose, Bugasan, Pandan, Calivo, Capiz, Romblon, Capiz, Concepcion, Escalante, Bacolod, and Iloilo.

When necessary stop at Gigantes Island light, Manigonigo light, San Fernando, Laoag, Manapla, Estancia, Ibajay, Buruanga, Sibaste, Colasi, Tibao, Patnogan, Sipalay, Isio, Ilog, Binalbagan, and Himamaylan.

It is intended that this boat shall meet route 6 vessel at Escalante each trip.

[No. 6.—Headquarters at Cebu.]

Sail on 1st of each month to Poro, Bogo, Escalante, Tiburan, Balamban, Valle Hermoso, Barili, Dumanjug, Tayasan, Bais, Dumaguete, Siquijor, Dumaguete, Oslob, Tagbilaran, Dalaguete, Argao, and Cebu.

Sail on 15th of each month to Argao, Dalaguete, Tagbilaran, Oslob, Dumaguete, Siquijor, Dumaguete, Bais, Tayasan, Dumanjug, Barili, Valle Hermoso, Balamban, Tiburan, Escalante, Bogo, Poro, and Cebu.

When necessary stop at Capitancillo light-house, Danao, Sogod, Bantayan, San Carlos, Guijulugan, Ginatilan, Zamboangita, and Siaton.

It is intended that the boat on this route shall meet the cutter on route No. 5 at Escalante each trip.

[No. 7.—Headquarters at Tacloban.]

Sail on or about the 6th of each month for Carigara, Caibiran, Naval (Biliran Island), Leyte, San Isidro, Villaba, Palompon, Ormoc, Cebu, Baybay, Hindang, Hilongas, Maasin, Malitbog, Liloan, Cabalian, Hinunangan, Abuyog, and Tacloban.

Sail on or about the 20th of each month for Catbalogan, Calbayog, La Granja, Catarman, Laguan, Oras, Borongan, Guinan, and Tacloban. Touch at Tubig during this trip whenever necessary.

[No. 8.—Headquarters at Zamboanga.]

Sail on the 1st day of each month for Malabang, Cottabato, Davao, Baganga, Mati, Davao, Cottabato, Malabang, and Zamboanga; thence to San Ramon government farm, Jolo, and Sasi, and back to Zamboanga. Stop at Mati five hours.

Sail on the 15th day of each month for Malabang, Cottabato, Davao, Mati, Baganga, Davao, Cottabato, Malabang, and Zamboanga; thence to San Ramon government farm, Jolo, and Siasi, and back to Zamboanga.

On the eastward trip touch at Caraga when necessary.

On the southward trip touch at Bongao when necessary.

[No. 9.—Headquarters at Cebu.]

Sail on or about the 1st and 15th of each month for Dumaguete, Dapitan, Oroquieta, Misamis, Iligan, Camp Overton, Cagayan, Mambajao, and Surigao; returning via same route.

On trip commencing 1st of month from Cebu, on the way south stop at Tagbilaran, and on the return portion of trip, commencing at Cebu on 15th of each month, stop at Tagbilaran.

Stop at barrio near mouth of Butuan River (for Butuan) on first trip of month when outward bound and on last trip of month when homeward bound.

Stop at Talisayan when necessary.

[No. 10.—Headquarters at Manila.]

Sail on or about the 9th and 24th of each month for Calapan, Romblon, Masbate, Cebu, Zamboanga, Jolo, Cebu, Masbate, Romblon, Calapan, and Manila, stopping en route at Capitancillo light-house when necessary.

[No. 11.—Headquarters at Aparri.]

Sail on or about the 8th, 15th, 22d, and 29th of each month for Alcala, Tuguegarao, Ilagan, and any intermediate points where stops are required.

VESSELS PERFORMING SPECIAL SERVICE.

In addition to operating on the foregoing routes, and affording the government means of communication and enabling it to carry on its duties between the islands, and transporting constabulary and

United States troops from place to place to suppress insurrection and local outbreaks, etc., these vessels have performed a considerable amount of special work, mentioned in detail in report of the marine superintendent.

Attention is invited to the report of Capt. James Miller, relating to the special duty of the cutter *Tablas* in the Sulu Archipelago.

Respectfully,

J. M. HELM,

Commander, U. S. Navy, Chief of Bureau.

The SECRETARY OF COMMERCE AND POLICE,

Manila, P. I.

REPORT OF THE LIGHT-HOUSE ENGINEER.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF LIGHT-HOUSE CONSTRUCTION,

Manila, P. I., July 26, 1904.

CHIEF OF BUREAU OF COAST GUARD AND TRANSPORTATION,

Manila, P. I.

SIR: I have the honor to transmit herewith the report of Mr. W. H. Robinson, assistant engineer, showing in detail the progress of the work of constructing the marine railway on Engineer Island, at the mouth of the Pasig River.

Before any work was done on the railway proper, a survey was made of the site selected, borings were driven to a depth of 100 feet to ascertain the nature of the underlying soil, and its bearing power was determined by driving and loading test piles. The results being satisfactory a bulkhead was built across the upper end of the slip chosen as a site; this served the double purpose of providing a convenient basin for the deposit of the material that had to be dredged to prepare the foundations, and of allowing a depression in the island covered with water to be reclaimed and used in connection with the railway.

After due advertisement, the contract for building the railway was let to the Atlantic, Gulf and Pacific Company, who submitted two bids, one for a cradle with a timber substructure and the other for one with a substructure of steel. The latter bid, though the higher, was by authority of the civil governor accepted as being the more advantageous to the government.

The contractors commenced work promptly and have so far pushed it vigorously and satisfactorily. All their operations are carefully watched and supervised, and every detail of the work closely inspected by this office. It is hoped that the railway will be ready for operation before the end of the calendar year.

Very respectfully,

SPENCER COSBY,

Captain Corps of Engineers, U. S. Army, Light-house Engineer.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF LIGHT-HOUSE CONSTRUCTION,

Manila, P. I., July 26, 1904.

Capt. SPENCER COSBY, Corps of Engineers, U. S. Army,

Light-house Engineer, Manila, P. I.

SIR: I have the honor to submit the following report, showing in detail the progress, during the fiscal year 1904, of the work of constructing the marine railway on Engineer Island:

1. On June 1, 1903, the Philippine Commission passed an Act No. 788, authorizing the construction of a 1,400-ton marine railway and machine shops on Engineer Island, Manila, P. I., to provide an adequate place for docking and repairing coast guard and other government vessels. The expenditure of \$140,000 United States currency was authorized for the purpose, but the act did not carry an appropriation with it. On August 11, 1903, Act 831 was passed carrying among other items an appropriation of \$35,000 United States currency for the purposes of the marine railway and machine shops, and on April 11, 1904, an additional appropriation of \$20,000 United States currency was made available by Act 1114.

2. By Act 788 the chief of the bureau of coast guard and transportation was authorized to construct the work, and by his direction the light-house engineer proceeded with the work

of obtaining data and doing the necessary preliminary work for the construction of the marine railway.

3. A survey party was organized in July, 1903, for the purpose of making a plat of Engineer Island and the adjacent slip or waterway wherein was to be located the marine railway. Soundings and borings to the depth of 100 feet were made and all possible information was secured as to the practicability of the scheme. Test piles were driven and loaded up to 20 tons per pile, and it was decided that it was feasible to build a marine railway on a pile foundation on the site selected.

4. To properly prepare Engineer Island for the purpose intended, by increasing the area of available land, and to make a site for a power house and other buildings, it became necessary to construct a temporary bulkhead across the slip. This bulkhead was intended to close the north end of the slip and thus form a basin into which material dredged from the marine railway site could be deposited, and thereby at one operation dredge the slip and build up the island.

5. Plans and specifications were made for the temporary bulkhead, and the work was advertised to contractors on August 1 and bids opened August 31, 1903. The bids received were so high that it was deemed more economical and advantageous to the Government to build the bulkhead by day labor, and the completion of the work at about the estimate of cost made by this office justified the rejection of all bids. In this connection the following figures, United States currency, are given for comparison:

Lowest bid received (not including superintendence).....	\$5, 770. 00
Estimate of this office (including superintendence).....	3, 500. 00
Actual cost of completed work of temporary bulkhead, including labor, material, and superintendence.....	3, 547. 35

6. The completion of the temporary bulkhead in December, 1903, and the building of a dike around the portion of the island to be filled practically completed the preliminary work, the cost of which was as follows, stated in United States currency:

Wages, including labor, drafting, and superintendence.....	\$3, 070. 43
Material.....	1, 919. 27
Contingent expenses, including rent of bancas, cascos, and launches and driving of 4 test piles by contract.....	1, 350. 60
Total.....	6, 380. 30

7. Specifications were drawn up and on November 30, 1903, advertisements were published asking for bids for the construction of a 1,400-ton marine railway complete, the contractor to furnish plans of the machinery, cradle, and other parts which he proposed to install. But one bid was received, that of the Atlantic, Gulf and Pacific Company, who proposed to use the marine railway and machinery made by Crandall & Son, of Boston, Mass. They made two offers, one including a wooden cradle for \$95,000 United States currency and the other including a cradle constructed of steel for \$104,900. The plans offered were satisfactory and the costs considered reasonable. Owing to the great activity of the teredo and other marine borers in the waters of the Philippines, and considering the cost of maintenance of the wooden cradle, it was thought advisable to accept the steel construction. On February 4, 1904, a contract was signed whereby the Atlantic, Gulf and Pacific Company agreed to construct the marine railway according to specifications and have the same completed and ready for use by December 15, 1904.

8. Actual work commenced on March 1, when the contractors began removing the concrete blocks and riprap in the slip, placed therein by the Spanish Government in its scheme for the improvement of the port. Dredging was commenced during March, the dredged material being deposited back of the temporary bulkhead. Dredging was continued intermittently until June when all the material necessary to be taken out had been removed, and the basin or low portion of Engineer Island had been filled as much as practicable with soft material. A covering of sand and gravel or other hard material will be necessary before the reclaimed portion of the island will be ready for occupancy.

9. Pile driving for the foundation of the railway was commenced on June 13, 1904, and is being pushed to completion. The foundation piles will all be driven by August 15, and should no unforeseen cause occur the entire work should be finished within the contract time.

10. The actual cost of the work of constructing a marine railway as authorized by Act 788, from the passage of said act to the end of the fiscal year 1904, including all preliminary work, has been as follows, stated in Philippine currency:

Wages:	
July, 1903.....	P 241. 79
August, 1903.....	649. 21
September, 1903.....	1, 019. 37

Wages—Continued.

October, 1903.....	₱1,253.34	
November, 1903.....	1,128.65	
December, 1903.....	1,234.20	
January, 1904.....	481.35	
February, 1904.....	132.96	
March, 1904.....	13.14	
April, 1904.....	154.23	
May, 1904.....	527.12	
June, 1904.....	571.74	
		₱7,407.10

Materials:

July, 1903.....	253.08	
August, 1903.....	263.05	
September, 1903.....	686.40	
October, 1903.....	2,636.01	
		3,838.54

Contingent expenses:

July, 1903.....	73.92	
August, 1903.....	130.43	
September, 1903.....	96.86	
October, 1903.....	1,000.00	
November, 1903.....	562.66	
December, 1903.....	917.33	
		2,781.20

Due contractors (not including the 10 per cent to be retained as per contract):

March, 1904.....	11,860.00	
May, 1904.....	1,918.38	
June, 1904.....	16,799.80	
		30,578.18

Due contractors for extra work (repairing break in bulkhead), March, 1904..

318.72

Total cost to June 30, 1904..... 44,923.74

The above amount may be segregated as follows:

Total preliminary work..... 12,760.61

Due contractors:

Permanent work.....	₱30,578.18	
Extra work.....	318.72	
		30,896.90

Engineering and inspection of permanent work..... 1,266.23

44,923.74

Respectfully submitted.

WM. H. ROBINSON,
Assistant Engineer.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF LIGHT-HOUSE CONSTRUCTION,
Manila, P. I., September 9, 1904.

CHIEF OF BUREAU OF COAST GUARD AND TRANSPORTATION,
Manila, P. I.

SIR: As directed in your letter of September 3, I have the honor to submit the following report of operations of this division for the months of July and August, 1904. This report is supplemental to the annual report for the fiscal year 1904:

The work of the division has progressed as outlined in the annual report. The stations at Bagacay, Capitancillo, and Tanguingui are nearing completion, and the parties who were at San Bernardino, Luzaran, and Bagatao have completed work and been brought to Manila, leaving these stations in good condition. The construction of new station on Apo Reef has been begun and the preliminary work has progressed favorably.

The following is a detailed account in brief of the work done at each station. The financial statements are approximate, owing to the difficulty of obtaining accurate information as to pay rolls, etc., so soon after the end of the month.

CAPITANCILLO.

About one-third of the coping blocks have been set on the retaining wall. The masonry walls of keeper's dwelling have been finished and the foundation of the annex laid. The upright girders of the tower have been erected and about one-half of the cylinder riveted in place. The wages of local laborers at this station were reduced from ₱0.80 to ₱0.50 during July. A number of the men left the work, but others were imported from Tanguingui and some of those formerly employed have returned, so that the pay roll has been reduced without apparent hindrance to the work.

Financial statement.

Balance, June 30.....	₱14,282.00
Appropriated since June 30.....	10,000.00
Total available July 1.....	24,282.00
Expenditures since June 30:	
Wages.....	₱1,493.53
Subsistence.....	945.50
Material.....	1,632.62
	<u>4,071.65</u>
Balance.....	20,210.35
Liabilities:	
Wages, August (estimated).....	1,700.00
Materials.....	396.84
Subsistence.....	1,000.00
	<u>3,096.84</u>
Balance available.....	17,113.51

TANGUINGUI.

The tower has been erected as far as the watchroom floor, but the riveting has not been finished. Bids will be opened on September 12 for furnishing the missing parts of the tower. Keeper's dwelling has been finished except some of the minor details. The foundation and walls of the annex have been completed and concrete walks laid. The drainage system from buildings to cistern is finished and the latter about half covered.

Financial statement.

Total amount (estimated).....	₱59,417.26
Expenditures to June 30.....	36,662.03
Balance.....	22,755.23
Expenditures since June 30:	
Wages.....	₱2,646.26
Subsistence.....	1,381.55
Materials.....	1,208.95
	<u>5,236.76</u>
Balance.....	17,518.47
Liabilities:	
Wages, August (estimated).....	2,700.00
Materials.....	3,206.65
Subsistence.....	1,700.00
	<u>7,606.65</u>
Balance available.....	9,911.82

BAGACAY.

The masonry tower has been completed and is ready for the metal work and lantern. Bids will be opened on September 12 for furnishing the metal work.

The oil and storeroom (concrete) are about half completed. The excavation has been made for the kitchen foundations, road built from dwelling site to well, and posts of dwelling erected and tied together.

Wages—Continued.

October, 1903.....	P1,253.34
November, 1903.....	1,128.65
December, 1903.....	1,234.20
January, 1904.....	481.35
February, 1904.....	132.96
March, 1904.....	13.14
April, 1904.....	154.23
May, 1904.....	527.12
June, 1904.....	571.77

Materials:

July, 1903.....	253
August, 1903.....	268
September, 1903.....	68

ENGINEER ISLAND.

Appropriations were made for the general improvement of Engineer Island, the boring of an artesian well, and the completion of the light-house warehouse and wharf. Work has been begun on each of these items. Filling has been commenced, the wharf has been completed, a concrete floor to the warehouse begun, and the well driven about 110 feet.

APPROPRIATIONS.

The following appropriations were made for current expenses and permanent improvements:

For maintenance of warehouse.....	₱12,000
For repairs to light stations.....	30,000
For improvement of existing lights.....	8,000
For completion of new storehouse.....	2,500
For completion, Tanguingui.....	25,000
For completion, Bagatao.....	5,000
For completion, Subig Bay.....	18,000
For construction, San Fernando.....	21,000
For 12 port lights.....	10,000
For completion, San Bernardino.....	5,000
For San Nicolas Shoal.....	1,000
For surveys.....	7,000
For completion, Capitanillo.....	10,000
For completion, Bajo Apo.....	23,000
For completion, Bagacay.....	15,000
For completion, Maniguin.....	20,000
For new light, Bolinao.....	60,000
For new light, Manila Breakwater.....	20,000
For improvement, Engineer Island.....	15,000
For artesian well.....	7,000
For marine railway.....	185,000

The report on marine railway is inclosed herewith.

Very respectfully,

SPENCER COSBY,
Captain, Corps of Engineers, U. S. Army, Light-House Engineer.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF LIGHT-HOUSE CONSTRUCTION,
Manila, P. I., September 9, 1904.

Capt. SPENCER COSBY, Corps of Engineers, U. S. Army,
Light-House Engineer, Manila, P. I.

SIR: I have the honor to submit the following report, supplemental to the report for the fiscal year 1904, of the work accomplished on the marine railway on Engineer Island for the months of July and August, 1904:

1. Pile driving was continued and practically finished excepting the cutting off of piles to grade at the lower end.
2. At the upper end of the railway all piles were cut off below the low-water line, and foundation is to be built up with concrete. This concrete work was commenced and more than half finished.
3. The power-house foundation piles were driven and the concrete bases for the engine, winding machine, and boiler built.
4. The engine and winding machine were set in position and a temporary shed built over them for protection.
5. The track timbers were framed and put together, rails laid on the stringers, and stringers protected with iron strips and large-headed nails for protection against teredos, and the entire structure will be launched in September and sunk to its position on the piles as soon as may be.
6. The percentages of finished work on August 31, 1904, were as follows:

	Per cent.
Dredging.....	100
Filling to grade.....	3
Piling, cut off.....	98
Lumber in place.....	5
Hauling out machinery.....	40
Power house.....	45
Concrete work.....	60

7. The total money value of the work finished was estimated at \$53,032.20 United States currency, or about 50 per cent of the contract price; 10 per cent of this amount is retained according to the provisions of the contract.

8. The cost of the work to August 31, 1904, has been as follows, stated in Philippine currency:

Total cost to June 30, 1904.....	₱ 44,923.74	
Wages:		
July, 1904.....	₱ 464.40	
August.....	624.23	
		1,088.63
Due contractors (not including the 10 per cent to be retained as per contract):		
July, 1904 (paid).....	36,741.82	
August (unpaid).....	28,137.96	
		64,879.78
Total cost to August 31, 1904.....		110,892.15

Very respectfully,

WM. H. ROBINSON,
Assistant Engineer.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF LIGHT-HOUSE CONSTRUCTION,
Manila, P. I., August 20, 1904.

CHIEF BUREAU OF COAST GUARD AND TRANSPORTATION,
Manila, P. I.

SIR: I have the honor to submit the following report of operations of the division of light-house construction for the fiscal year ending June 30, 1904:

Capt. Henry Jervey, Corps of Engineers, U. S. Army, was in charge of this division until August 12, 1903, when I relieved him and continued on duty as light-house engineer for the remainder of the fiscal year.

CONDITIONS AT BEGINNING OF YEAR.

The organization of this office was but partially completed. The clerical force was inadequate; the system of property accountability left much to be desired; there was no engineering force and no regular system of inspecting work in progress.

Detached parties were at work at four outlying points, viz, Bugui, Jintotolo, Capul, and San Bernardino, where they were engaged in completing third-order light stations begun under the Spanish régime. Apparatus for these stations, for two sixth-order lights and for two port lights had been ordered from Paris.

Sixty-one lights were in operation, including 15 flashing lights, 5 fixed lights, and 41 minor lights (lens lanterns, post lanterns, and electric arc lights).

WORK ACCOMPLISHED DURING THE YEAR.

The organization of the office has been completed, so that it now has a force competent properly to design and carry on the amount of new work for which funds and transportation facilities have been provided, and to keep in fairly good order the lights now in operation. An officer of the Corps of Engineers of the Army has been detailed as assistant to the light-house engineer, an experienced civil engineer has been placed in direct charge of the more important works of construction, frequent inspections are made of all work in progress, the clerical force has been increased and, under an able chief clerk, is doing excellent work; a skilled machinist has been brought from the United States to install and care for the delicate light-house apparatus, and the system of records, reports, and property accountability has been improved and extended, greatly adding to the efficiency of the work.

It has been found impossible in many cases to secure overseers and mechanics of the kind desired to make up our working parties. This difficulty is being remedied whenever possible by a gradual process of elimination and selection.

A survey party is greatly needed to complete our working force, and will be organized as soon as funds are provided.

The work at Bugui, Jintotolo, and Capul has been completed, and these stations are in full running order. As it is impossible to make a landing on the island of San Bernardino during the prevalence of the winter monsoon, it was necessary to take away the working party on September 10, 1903, before they had completed all the necessary repairs. This important light has, however, been kept in continuous operation, and a new working party, landed at the island on June 19, 1904, is expected to complete the station in a few weeks.

Extensive repairs, requiring in each case several months to complete, have been made at Calabazas and Gigantes light stations, and minor repairs at a number of other stations.

In addition to the repair party now at work at San Bernardino there is also a working party at Luzaran (at the southern extremity of Guimaras Island) engaged in building a heavy concrete retaining wall around the brow of the hill on which the light-house tower and dwelling are situated. This wall is designed to prevent the threatened sliding of the structures into the sea.

Besides the two repair parties, field parties of from 30 to 100 men each are at present at work building new stations for flashing lights at Bagacay and Capitancillo, on the east coast of Cebu, at Tanguingui Island south of Masbate, and at Bagatao Island at the entrance to Sorsogon Bay. An additional party has been organized and will be sent early in July to begin the construction of a third-order light station on Apo Island off the west coast of Mindoro.

The fixed light at Siete Pecados has been replaced by an incandescent flashing light, the first to be established in these islands in which the new and powerful system of incandescent burners with petroleum vapor is used instead of the ordinary wick lamp. The experiment is being watched carefully to determine whether it is practicable to extend this system to other lights.

Three-lens lantern lights and three beacons marking shoals have been erected in the harbor of Romblon. A number of the minor lights have been replaced by others more powerful and visible at a greater distance. New lights have been installed where they were most urgently needed, including seven along the coasts of Mindanao, where formerly there were only two.

Detailed reports, with statement of cost, of the operations referred to above are given later under the heads of "New work" and "Repair work."

NEW LIGHT-HOUSES.

The total number of lights in operation was increased from 61 at the beginning of the fiscal year to 76 at its close, including 19 flashing lights, 3 fixed lights, and 54 minor lights. One minor light was discontinued.

The following new lights were put in operation during the fiscal year:

Capul Island, San Bernardino Straits, third order, flashing white light. November 1, 1903.

Jintotolo Island, south of Masbate, third order, flashing white and red light. December 18, 1903.

Tanguingui Island, lens lantern, fixed white light. December 31, 1903.

Los Baños, Laguna de Bay, 3 lanterns on tripod, white and red fixed lights. December 29, 1903.

Cottabato, Mindanao, lens lantern, fixed red light. March, 1904.

Tagolo Point, Mindanao, lens lantern, fixed white light. March, 1904.

Surigao, Mindanao, lens lantern, fixed red light. March, 1904.

Sabang Point, Romblon, lens lantern, fixed white light. April 9, 1904.

Romblon Harbor Range, lens lantern, fixed red light at front and rear points. April 9, 1904.

Camp Overton, Mindanao, lens lantern, fixed red light. March 21, 1904.

Ormoc, Leyte, lens lantern, fixed red light. April 2, 1904.

Bagatao Island, entrance to Sorsogon Bay, sixth order, flashing white light. May 15, 1904.

Port Bongao, Tawi-Tawi, lens lantern, fixed white light. About March 10, 1904.

Tai-Tay, lens lantern, fixed white light. April, 1904.

Davao, Santa Cruz and Malalog, on Gulf of Davao, lens lanterns, fixed red lights, has presumably been established at each of these points.

CHANGES IN LIGHTS.

The following are the more important changes in existing lights made during the fiscal year:

Bugui.—The time of revolution of the flashing light was reduced from 30 to 10 seconds in October, 1903.

Manila breakwater.—The red light was discontinued on November 1, 1903. Its place is taken by temporary lights maintained by the contractors who are building the breakwater.

San Fernando Range.—A single red lens lantern of improved pattern was put in place of the two lights at each range point in February, 1904.

Siete Pecados.—The fixed light was replaced by a flashing white light on April 10, 1904.

Legaspi.—A fixed red light was placed below the white light on April 5, 1904.

Pitogo.—The globe lantern on a bamboo pole was replaced by a red lens lantern on cupola of church on April 20, 1904.

Calapan.—A red lens lantern replaced the red and white lights on April 21, 1904.

NEW WORK.

The following is a description of the work accomplished under the various appropriations made for the construction of new light stations and the completion of those already under way:

The Spanish Government plans included, among many others, the erection of towers for flashing lights at the following localities: Capitancillo Island, east of the north end of Cebu Island; Tanguingui Island, south of Masbate Island; Apo Reef, off the west coast of Mindoro; Point Bagacay, on the east coast of Cebu Island; Maniguin Island, west of Panay Island; Cape Bolinao, on the west coast of Luzon.

It was proposed to erect steel towers at the first three mentioned stations, and in 1896 the towers were purchased complete in France by the Spanish authorities and delivered in Manila. The tower for Tanguingui was taken by them to that island and left exposed to the elements and unguarded during the insurrections, resulting in the loss and destruction of many of the smaller parts. The other two towers were left in Manila and were found in excellent condition when taken possession of by the Americans.

At the beginning of the fiscal year 1904 no work had been attempted at any of the above stations by this office. The Spanish Government had commenced work at Capitancillo and Tanguingui islands, but had accomplished little and abandoned them when the insurrection broke out.

During the past year work in connection with the various stations has been as follows:

CAPITANCILLO.

A party consisting of 4 Americans and 48 natives was organized in September, 1903, and sent to this station, leaving Manila September 27.

The Spanish Government had commenced the construction of a retaining wall around the site for the tower and buildings, had made some excavations, and had transported a quantity of building rock and sand from the mainland.

Work was commenced in October by this division, the construction of the retaining wall being first taken up. The Spanish plans have been generally followed, with modifications. Owing to the small size of the island and the scarcity of building materials, it was necessary to transport all the required sand and rock as well as fresh water, from the mainland of Cebu. Quarries were opened near the town of Tabogan, about 7 miles from Capitancillo.

Bad weather and poor transportation facilities have delayed the work. A scow with a carrying capacity of about 10 tons was built at the station for transporting rock and was used successfully during calm weather, but could not be used much of the time.

In March, 1904, the light-house tender *Picket* was sent to the station for duty, and most of the necessary material was transported by her in a short time.

The party has been gradually increased until in June, 1904, it consisted of 3 Americans and over 80 natives, a number of the latter being obtained locally.

During the fiscal year the work accomplished, in addition to the building of temporary quarters, storehouses, etc., has been as follows:

1. The retaining wall was finished on three sides, excepting the coping blocks, an opening being left in the north wall to allow of the easy handling of heavy material.
2. Excavations were made for the foundations of the tower, keepers' dwelling, annex, and cistern.
3. Foundation of keepers' dwelling was finished and the masonry walls carried up about two-thirds of the required height.
4. Foundation of the tower was finished and one section of the steel work erected.

The work at this station is now well under way and is being pushed as rapidly as possible. The station will probably be complete about the end of October, 1904.

Money statement.

Appropriations:

Act 831.....	₱ 50,000. 00
Act 1114.....	20,000. 00
	<hr/>
	70,000. 00

TANGUNGUI.

A party consisting of 2 Americans and 55 natives was organized in December, 1903, and sent to this station, leaving Manila on December 10.

The Spanish Government had delivered the steel tower on the island, constructed a cistern of about 15,000 gallons capacity, and made some of the excavations for tower and building foundations.

An examination disclosed the fact that the steel parts of the tower were badly rust eaten, some parts being so far gone as to be useless. A number of other parts, principally small ones, were missing. After the building of temporary quarters, the entire working force were employed in cleaning, sorting, and painting the various parts of the tower. A list of the missing and worthless parts was obtained and they will be replaced in the immediate future.

The Spanish plans, somewhat modified, have been followed at this station.

Some difficulty was experienced in obtaining a supply of fresh water. Water was delivered at the island by the light-house tenders and the station was equipped with a sailing prao of about 7 tons carrying capacity to act as a water boat; it has served the purpose very successfully, bringing water in sufficient quantity from a point about 10 miles distant.

A temporary wharf was built to facilitate the landing of cargo, but during the heavy weather of the past two months was carried away. Fortunately, however, all the heavy material needed has been delivered.

The party has been increased by 1 American and 28 natives, the latter employed locally making the total strength of the party in June, 1904, 3 Americans and 83 natives.

During the fiscal year the work accomplished, in addition to the building of temporary quarters, storehouses, wharf, etc., has been as follows:

1. Cleaning and painting the parts of the steel tower.
2. Excavating for foundations of tower, keepers' dwelling, and annex.
3. Foundations for tower and keepers' dwelling completed.
4. Concrete walls of keepers' dwelling carried to about one-half the required height.
5. Two sections of steel tower erected.
6. Grounds around station graded.

A temporary lens lantern displaying a fixed white light was established December 31, 1903.

The work at this station is progressing rapidly and will be finished about the end of October, 1904.

Money statement.

[Built from appropriation for the completion of minor stations and construction of new.]

POINT BAGACAY.

A party consisting of 1 American and 26 natives was organized in September, 1903, and sent to this station, leaving Manila October 4.

The location selected at this place for the erection of the tower for the flashing light, which is to replace the present lantern, was some distance from the landing place and it required considerable preliminary work before any actual permanent work could be commenced.

The landing is bad and it became necessary to build a long rock pier to obtain water enough to float a ship's boat. Temporary quarters and storehouses were built, the pier constructed, a light railroad track, requiring much grading, was laid from the landing to the tower site, a well sunk and temporary cistern built. Work on the permanent structures was not commenced until February, 1904, when excavation for the tower foundation and transportation of building material to the site was begun.

Owing to trouble in securing local labor the work did not advance as rapidly as was hoped for but at the present time conditions are improving and the work is progressing fairly well.

The plans of the Spanish Government for this point have been radically changed. The tower is practically the same, being of masonry construction, but instead of the masonry buildings, frame structures on masonry foundations have been substituted. This has been done with a view of comparing the original cost, and cost of maintenance of the two classes of buildings. Complete plans of the various structures have been made.

The party has been increased, until in June the working force consisted of 1 American and 64 natives.

The permanent work that has been finished during the fiscal year has been as follows:

1. The masonry tower completed for about one-half its height.
2. The masonry piers for the foundation of the keepers' dwelling completed.

It is thought that this station should be in operation about January 1, 1905.

BAGATAO ISLAND.

A working party, in charge of an American overseer, was sent to construct a light station here, in January, 1901, and will complete the work by the middle of August.

The party has consisted of 2 Americans, from 6 to 10 Chino carpenters, and about 30 Filipino workmen hired in Manila on account of the difficulty of securing local laborers.

The preliminary work consisted of the construction of temporary quarters and storehouses, the building of a landing pier of cribwork and masonry, the clearing and grading of a service road from the pier to the tower site, the clearing and grading of the site for the permanent structures, and the digging of wells in an attempt to obtain fresh water on the island.

The permanent work has consisted of the erection of an iron tower, a frame dwelling for the keepers, a frame kitchen, a concrete storehouse and oil room, a cistern of concrete reinforced with steel, a frame latrine, a tripod for a port light, and the cutting of considerable hardwood lumber for use here and at other stations.

The tower, an iron cylinder 29 feet high, is anchored to its concrete base on the summit rock by anchor bolts 1 meter long; this tower was bought during Spanish times but several minor pieces had been lost requiring new ones to be made.

The frame dwelling (38 feet 2 inches by 37 feet 6 inches), is supported on Molave posts set in concrete pillars.

The sixth-order flashing white light, first lighted on May 15, is equipped both with an incandescent and with an ordinary burner.

A red fixed port light is displayed on a tripod to the east of the flashing light.

The timber cut on the reservation has cost much less than the same quality of wood costs in Manila.

Money statement.

ROMBLON HARBOR.

Arrangements were made with the governor of Romblon to have the province supply the necessary boats and lighters and pay the laborers needed for the erection of lights and construction of beacons in Romblon harbor. With this understanding an American overseer and assistant were sent to that place in February to take charge of the work, and the necessary materials were also supplied by this division. The province provided about 20 laborers per day until May 1, after which it was necessary for this division to hire laborers until the completion of the work about May 15. The amount of work was greater than was at first contemplated and the provincial authorities did not deem themselves justified in spending more money after May 1.

The following work was accomplished:

Sabang Point.—A port light was established on this point on a concrete tower erected during the Spanish occupation. This light marks the entrance to the harbor.

A nipa dwelling of four rooms for the keeper was built. Small hardwood trees were cut on Bagatao Island for the posts of this dwelling and were set in concrete in the ground, to prevent their being attacked by either rot or white ants. A small storehouse for oil and paints was erected near the tower.

The ground surrounding the station was cleared and fenced.

Sabang Reef.—On the extremity of this reef was erected a structure of heavy iron pipes 24 feet high. The reef is rough and rocky and covered by about 5 feet of water at low tide. The iron structure was fitted together on a lighter and then towed to the reef and sunk in place. Concrete in sacks was used to level the structure and to anchor the legs. Loose stone was piled around the beacon up to low-water level. Two wooden targets visible several miles were fastened to the upper part of the beacon. The structure was treated with hot coal tar to preserve it from the action of salt water.

Agbatan Reef.—A beacon similar to the one described above was erected on this reef under practically the same conditions.

Binagon Reef.—A concrete beacon supporting an upper part of wood was erected on this reef.

The depth of the water at the site is only 3 or 4 feet and little difficulty was experienced in depositing the concrete, using a box as a cofferdam.

Range lights.—The front range structure is similar to the beacon constructed on Binagon Reef. The rear range is a post erected on shore. On each of these is displayed a red lens lantern.

Money statement.

The location selected at this place for the erection of the tower for the flashing light, which is to replace the present lantern, was some distance from the landing place and it required considerable preliminary work before any actual permanent work could be commenced.

The landing is bad and it became necessary to build a long rock pier to obtain water enough to float a ship's boat. Temporary quarters and storehouses were built, the pier constructed, a light railroad track, requiring much grading, was laid from the landing to the tower site, a well sunk and temporary cistern built. Work on the permanent structures was not commenced until February, 1904, when excavation for the tower foundation and transportation of building material to the site was begun.

Owing to trouble in securing local labor the work did not advance as rapidly as was hoped for but at the present time conditions are improving and the work is progressing fairly well.

The plans of the Spanish Government for this point have been radically changed. The tower is practically the same, being of masonry construction, but instead of the masonry buildings, frame structures on masonry foundations have been substituted. This has been done with a view of comparing the original cost, and cost of maintenance of the two classes of buildings. Complete plans of the various structures have been made.

The party has been increased, until in June the working force consisted of 1 American and 64 natives.

The permanent work that has been finished during the fiscal year has been as follows:

1. The masonry tower completed for about one-half its height.
 2. The masonry piers for the foundation of the keepers' dwelling completed.
- It is thought that this station should be in operation about January 1, 1905.

BAGATAO ISLAND.

A working party, in charge of an American overseer, was sent to construct a light station here, in January, 1901, and will complete the work by the middle of August.

The party has consisted of 2 Americans, from 6 to 10 Chino carpenters, and about 30 Filipino workmen hired in Manila on account of the difficulty of securing local laborers.

The preliminary work consisted of the construction of temporary quarters and storehouses, the building of a landing pier of cribwork and masonry, the clearing and grading of a service road from the pier to the tower site, the clearing and grading of the site for the permanent structures, and the digging of wells in an attempt to obtain fresh water on the island.

The permanent work has consisted of the erection of an iron tower, a frame dwelling for the keepers, a frame kitchen, a concrete storehouse and oil room, a cistern of concrete reinforced with steel, a frame latrine, a tripod for a port light, and the cutting of considerable hardwood lumber for use here and at other stations.

The tower, an iron cylinder 29 feet high, is anchored to its concrete base on the summit rock by anchor bolts 1 meter long; this tower was bought during Spanish times but several minor pieces had been lost requiring new ones to be made.

The frame dwelling (38 feet 2 inches by 37 feet 6 inches), is supported on Molave posts set in concrete pillars.

The sixth-order flashing white light, first lighted on May 15, is equipped both with an incandescent and with an ordinary burner.

A red fixed port light is displayed on a tripod to the east of the flashing light.

The timber cut on the reservation has cost much less than the same quality of wood costs in Manila.

BUGUI POINT.

At the beginning of the fiscal year a party of about 60 men were at work completing this station, which had been left in an unfinished condition by the Spaniards. A third-order flashing light had been installed but had been partly destroyed by insurrectos and the other parts were so badly rusted that it was necessary to get a new apparatus.

This work was completed last September. The following is a partial list of the work done during the year by the party:

Made and fitted doors and windows, laid walks, built gutters, finished ceiling, roof, and veranda and completed generally all needed work on the tower, kitchens, storeroom and dwelling.

Last January a small party was sent to this station to regrade the court because water stood on it, to paint the roofs, to erect a flagstaff, put a lightning rod on the tower, and make ventilators for the lantern, as it had been discovered that the light did not burn steadily without this regulation.

This work was completed in February.

CAPUL ISLAND.

At the beginning of the fiscal year a party was at work at Capul light station, which had been left in an unfinished state by the Spaniards. Work was continued with a force of from 60 to 90 men until last November, when the work was completed.

A third-order flashing light had been installed here by the Spaniards, but had been destroyed by the insurrectos, and a new one had to be bought.

Since the beginning of the year the walls of the house have been completed, the roof put on, the house finished, a latrine built, the tower completed, the apparatus installed, the grounds graded, walks laid, etc. The station is now in excellent condition and in full working order.

JINTOTOLO.

This station, like several others, had been in course of construction when the Spanish-American war broke out. A party of about 40 men were completing the work under this office at the beginning of the fiscal year.

The work done since the 1st of July by this party was the finishing of the floors, ceilings, veranda, kitchens, cistern, plastering, fence, walks, doors, and windows, grading, the installation of a third-order flashing light, etc., which was completed last December.

Money statement.

SAN BERNARDINO.

At the beginning of the fiscal year a party was at work completing this station, which had been left in an unfinished state by the Spaniards.

The party remained there until September, when they were taken off the island, as it was not considered safe to leave them longer on account of the impossibility of landing there during the winter months.

A party was again sent to this station to complete the work in May, 1904, and are there at present.

The work done during the year has included the making of doors and windows, completion of storehouse and kitchen, painting, plastering, tinning, ironwork on veranda, etc.

BAJO APO.

A survey party was organized in November, 1903, and sent to this station for the purpose of making a topographical survey of the island.

Several plans were considered and compared with the original Spanish plans. It was finally decided that for all structures, excepting the tower, a different construction would be used, and instead of the heavy masonry buildings proposed by the Spanish Government, modern steel concrete structures will be erected. This construction will be lighter, require less material, and therefore be more economical and still be fully as strong and permanent as the heavier construction.

Complete plans were made, and in June, 1904, a party of 1 American and 45 natives was organized and will be sent to the island early in July. Work will be pushed as rapidly as possible, and, weather permitting, the station will be in operation in about ten months.

GRANDE ISLAND (SUBIG BAY).

In January a new port light was displayed on the incomplete tower on this island in place of the old lens lantern.

A preliminary examination was made to ascertain the amount of work done by the Spaniards, what materials were left at the station and in what state of preservation, and to make plans for the necessary work to complete the station.

Plans have been begun for this work and it is expected to send a construction party to the station in August, 1904, to complete the station and install a new flashing light.

	<hr/>
Estimated total cost.....	21,669.46

CAPE BOLINAO.

A surveying party was sent to this place in February to make a survey and to get the elevation of several points, with a view to choosing a site for a new flashing light. The party worked under great difficulties. It was compelled to land several miles from the site on account of the rocky and dangerous coast. Two days were required to reach the site, a road having to be cut through the brush and woods over a part of the way.

The country is rough and densely wooded, making surveying work slow and difficult.

SAN FERNANDO POINT.

The same surveying party also made a survey for a reservation on San Fernando Point, and chose a site for a new flashing light.

SAN FERNANDO RANGE.

The red lens lanterns on the range beacons at San Fernando were unsatisfactory on account of not being visible at a sufficient distance. A red port light was substituted for each pair of these lanterns, the beacons were painted a different color to increase their visibility, and each reservation was inclosed by a fence.

DAGUPAN.

The reservation at Dagupan was surveyed and the boundaries marked.

SILAQUI.

A survey was made of this island to ascertain its desirability as the site for a light station.

RAPU-RAPU.

A preliminary examination was made of this point to choose a site for a light station. An available site was found, its elevation obtained, and also information concerning the place for anchorage, landing, water supply, etc.

Notices to mariners have been issued during the year and widely distributed, giving necessary warnings of changes, irregularities, etc., in lights.

Correspondence has been had with the governments of Japan, China, and the Dutch East Indies relative to their experiences with different kinds of apparatus and structures, and with particular reference to the atmospheric and seismic conditions of this part of the world.

REPAIR WORK.

The following work was accomplished during the fiscal year under the appropriation for "Repairs to light stations now in operation," Acts 807 and 1049:

CALABAZAS.

A party consisting of 2 Americans, 3 chino carpenters, and 6 native laborers began extensive repairs here on August 10, 1903. This force was increased to a total of over 40 on September 18, and remained at about that strength until completion of repairs last February.

A landslide had threatened the safety of the tower, making it necessary to build a retaining wall to protect it.

Excavations were made under the floors and new ones put in; new roofs and ceilings were made and several roof timbers replaced which had been destroyed by white ants; the service road was improved, drains constructed, a new latrine built, etc.

Money statement.

Expenditures:

Wages.....	P9, 587. 95
Material.....	2, 658. 63
Subsistence.....	3, 016. 70
Total.....	15, 263. 28

GIGANTES.

A working party consisting of 2 Americans, 4 Chino carpenters, and 17 Filipino laborers began extensive repairs here on August 9, 1903, and continued work with small additions to the force until the completion of the repairs in January, 1904.

The station was in a very dilapidated condition, having been neglected for several years, making it necessary to renew or repair the roofs, gutters, cornice, ceilings, floors, doors, windows, cisterns, roof timbers, etc.

Excavations were made under the floor to a depth of 2 feet 6 inches, new sills were put in, and new foundations under the partition walls, with the expectation that the floors will now be more durable and not likely to be attacked by white ants.

Money statement.

Expenditures:

Wages.....	P7, 355. 16
Material.....	2, 938. 09
Subsistence.....	1, 272. 20
Total.....	11, 565. 45

LUZARAN.

The station at Luzaran had become endangered by the giving way of the retaining wall in front of the tower. A large section of this wall had overturned and fallen into the sea, taking with it part of the earth backing, leaving both the tower and house in imminent danger of being undermined. It was decided to replace the old wall by a new concrete wall of greater thickness and constructed nearer to the tower.

A party of 16 men under charge of an American overseer was sent to this station in January, 1904; some local laborers were hired, making in all a party of 25 men. They will complete work about July 25.

This station was built partly on a fill, making it necessary to go down to a depth of 18 feet in front of the tower in order to get a firm foundation for the new retaining wall. This

wall is 2 feet thick at the top, and has a batter of 1 foot horizontally to each 3 feet vertically. The surface of the ground between the house and retaining wall has been covered by a cement mortar walk to prevent water getting in behind the wall, and drain pipes have been led through it near the base to allow any water inside to escape.

The system of drainage has been so arranged as to discharge all surface water at the rear of the station so as to prevent the soil in front of the station from being washed away.

Besides the retaining wall certain minor repairs have been made.

The old Spanish latrine near the house was changed into an oil room.

A new concrete latrine with a flushing system was constructed at a short distance from the house.

Repairs were made to the concrete stairway leading from the beach to the station.

Repairs were also made to the kitchen stove and to the roof.

Money statement.

CAPONES.

This important first-order light has given constant trouble. The lens is of the old pattern and revolves on steel rollers, which, with the track on which they run, have become worn and uneven, so that the light runs irregularly and sometimes stops.

New rollers were made and substituted for the old ones, with the result that the regularity of the light has been much improved.

Money statement.

Expenditures:

Rollers, etc.....	P 660. 42
-------------------	-----------

SIETE PECADOS.

On the 21st of March a party of 6 men in charge of an American carpenter were sent to this station to make minor repairs. These were completed in May.

A new frame latrine was built at some distance from the dwelling, and the old Spanish one adjoining the kitchen was converted into a storeroom.

The kitchen stove and sink were changed and improved, and the doors and windows of the station repaired and refitted where necessary.

The fixed light was replaced by a new flashing light, which is fitted with both an incandescent and an ordinary burner, the installation being made by an American machinist with the assistance of the working party.

REPAIR SHOP AND STOREHOUSE.

In June, 1904, the repair shop and storehouse, formerly located on the south bank of the Pasig River near the machine shop of the works of the port, were moved to the building on Engineer Island, which had been reconstructed for the purpose by the bureau of architecture. The building is not yet completed; a good deal remains to be done to place it in satisfactory condition for use. A wharf was built by this office along the river side of the new storehouse, and tools and machinery have been ordered for the repair of light-house apparatus.

From the storehouse were shipped to the various stations practically all the materials, tools, and supplies used in construction and repair work. Minor repairs and changes in apparatus and various small parts needed were made in the repair shop.

PROPOSED WORK DURING COMING YEAR.

The repair work now under way at Luzaran and San Bernardino and the construction of the new station at Bagatao should be completed during the present month and the working parties withdrawn. If sufficient funds are provided, an attempt may be made to build a small wharf at San Bernardino to enable a landing to be made there during the winter months in case of emergency. It is doubtful whether a wharf can be built for a moderate sum that will stand the heavy seas that constantly beat around this island.

The party organized to construct the new station on Apo Island will commence work early in July. It is expected that a party will be ready in August to begin the reconstruction of the light-house marking the entrance to Subig Bay.

The apparatus for the flashing light on San Nicolas Shoal, Manila Bay, has been delivered and will be installed in the course of a few weeks, weather permitting.

The work on the new stations at Tanguingui and Capitancillo should be completed by the end of October, and that at Bagacay two or three months later. It is probable that the parties from these stations will be reorganized and two of them sent to build the proposed light-houses at San Fernando Point and on Maniguin Island, off the west coast of Panay. All the necessary apparatus and appurtenances for these two lights, and for those at Apo, Subig Bay, Tanguingui, Capitancillo, and Bagacay, are either on hand or have been ordered and will be paid for from appropriations already made.

Twelve port lights, two of which are to be occulting, have also been ordered from funds on hand and should be received within the next few weeks. Some of them will be used to replace inferior lights and others will be established at new points.

A number of stations now in operation are in need of repairs. In a few cases the need is urgent, but it is believed that in no case will the repairs have to be of a very extensive character. The amount of work in sight is, however, ample to keep a repair party continuously at work during the year.

A survey party under a competent civil engineer should be organized as soon as possible. It is needed to make careful topographical surveys of proposed sites for new stations, to lay out new light-house reservations, and to mark those already set aside.

Funds have been asked for to increase the distinctive character of some of our minor fixed lights by converting them into occulting lights. It is also desired to improve some of the flashing lights by installing in them incandescent burners and by eliminating the objectionable false flashes, due mainly to the use of flat instead of curved panes of glass in the lantern.

Estimates have been submitted for the construction of 7 new light stations, of which 4 are to be third and fourth order flashing lights, and 3 are to be occulting lights. If the amounts asked for are appropriated, it is hoped to begin construction work at most of these new stations during the coming year.

Very respectfully,

SPENCER COSBY,
Captain, Corps of Engineers, U. S. Army,
Light-house-Engineer.

REPORT OF THE DIVISION OF LIGHT-HOUSE MAINTENANCE.

BUREAU OF COAST GUARD AND TRANSPORTATION,
OFFICE OF THE LIGHT-HOUSE INSPECTOR,

Manila, P. I., July 28, 1904.

CHIEF OF BUREAU OF COAST GUARD AND TRANSPORTATION,

Manila, P. I.

SIR: The division of light-house maintenance has the honor to submit the following report for the fiscal year ending June 30, 1904:

1. There were maintained by this division at the beginning of the year 15 flashing lights, 5 fixed lights, and 41 smaller lights.

During the year there have been 2 fixed lights changed to flashing lights, and 2 flashing and 14 lesser lights established; also 1 small light discontinued, making the total number of lights in existence June 30, 1904, as follows: Flashing lights, 19; fixed lights, 3; smaller lights, 54; total, 76.

2. At the beginning of the year there were employed for the care and maintenance of the lights 80 keepers in charge and assistants, 8 apprentices, and 36 boatmen.

During the year the following changes have been made: Keepers discharged, 22; apprentices discharged, 13; boatmen discharged, 21; keepers employed, 27; apprentices employed, 33; boatmen employed, 24; apprentices promoted to keepers, 9.

The following were in the employ of this division on June 30, 1904: Keepers in charge and assistants, 93; apprentices, 19; boatmen, 40.

3. At the beginning of the year there were 44 buoys in position. There have been 20 new ones placed during the year, as follows: Channel to Pasig River, Manila Bay, 5; over wreck near breakwater, Manila Bay, 1; over wreck of the steamship *Castilla*, Canacao Bay, near Cavite, 1; Port Matalvi, Luzon Island, 1; Port Bolinao, Luzon Island, 2; San Fernando de Union Harbor, Luzon Island, 2; Cuyo Harbor, Cuyo Island, 2; Catbalogan Harbor, Samar Island, 1; Misamis Harbor, Mindanao Island, 3; Camp Overton Harbor, Mindanao Island, 2.

There has been one buoy discontinued (Salomague Harbor, Luzon Island), leaving 63 buoys in position June 30, 1904. Of these one is a temporary buoy placed off San Bernardino Island, for the use of the light-house tenders. Forty-six of these buoys have been overhauled and painted by light-house tenders and 17 by contract.

4. There were 9 beacons in existence at the beginning of the year. During the year there have been 10 more established, as follows: Port Matalvi, Luzon Island, 1; Romblon Harbor, Romblon Island, 5; near Cottabato, at mouth of the Rio Grande de Mindanao, 2; Basilan Island, 2; 19 beacons in existence June 30, 1904.

Act No. 807, enacted in July, 1903, appropriated for "buoyage for the half year ending December 31, 1903".....	P 16,000.00	
Act No. 1049, enacted in February, 1904, appropriated for "buoyage for the half year ending June 30, 1904".....	11,000.00	P 27,000.00
Expended to June 30, 1904.....	14,743.74	
Outstanding liabilities.....	11,764.30	
		26,508.04
Balance.....		491.96

Having had no vessel that was properly fitted for laying and handling buoys, we have been somewhat retarded in this line during the past year, but as the *Corregidor* has lately been fitted with a powerful lifting gear she is now prepared to handle any weight that may be required of her. It is proposed to place some thirty buoys during the coming year, as well as changing some of the second-class buoys at Iloilo and Cebu, replacing them with first-class buoys of United States regulation pattern. It is also proposed to build a buoy shed on Engineers Island, where all buoys will be overhauled and painted each year.

5. The light-house tender *Corregidor* (single screw, 250 tons, built in Shanghai, 1902) was hauled up on the slipway at Canacao early in December, 1903. Her rudder post was repaired, 226 sheets of metal on her bottom were renewed, and other necessary docking repairs were executed, at a total cost of P2,092.02. In June, 1904, she was fitted with heavier lifting gear for the better and safer handling of buoys and their appendages, heavy construction material, etc., at a cost of P1,050. She has a complete set of new awnings, costing P486.

During the past year she has placed 13 buoys and overhauled, painted, and replaced 31. She has made 313 visits to light stations, carrying a considerable amount of construction material, supplies, construction parties, etc., steaming 17,523 miles, on a consumption of 1,180 tons of Australian coal.

The light-house tender *Picket* (twin screw, 109 tons, formerly the *Woo Foo* of Shanghai) has been hauled out of the water three times during the past year (at Cavite navy-yard in August, 1903, and May, 1904; at Canacao in June, 1904). Both of her old propellers were replaced with new ones, her shafts were lined up, various repairs were made to her engines, boilers, hull, etc., and the vessel was calked all over and resheathed throughout with Muntz metal, at a total cost (three dockings) of P5,470.23. She is at present having the deck over her engine and firerooms renewed, which will cost P1,450.

She has been fitted with a complete set of new awnings, costing P272.75.

During the past year she has made 212 visits to light stations, carrying supplies, etc., steaming 13,314 miles, on a consumption of 478½ tons of Australian coal. She has placed 7 new buoys and overhauled, painted, and replaced 12.

The coast-guard cutter *Romblon* (twin screw, 250 tons, built in Japan, 1903) has been detailed on light-house duty since February, 1904. Her work has been principally with the construction division of this bureau.^a

6. Tabulated lists of the expenses of light stations and of the light-house tenders are attached hereto.

Very respectfully,

ALEX. FRANKLYN,
Light-House Inspector.

^aThe *Romblon* was formally invoiced to this division on July 1, 1904, by the division of vessels.

BUREAU OF COAST GUARD AND TRANSPORTATION,
OFFICE OF THE LIGHT-HOUSE INSPECTOR,
Manila, P. I., September 16, 1904.

CHIEF OF BUREAU OF COAST GUARD AND TRANSPORTATION,
Manila, P. I.

SIR: The division of light-house maintenance has the honor to submit the following report for the months of July and August of 1904, supplemental to the annual report for fiscal year ending June 30, 1904:

1. There has been one flashing light established on San Nicolas Shoal, Manila Bay, sixth order, making the total number of lights under control of this division August 31, 1904, as follows: Flashing lights, 20; fixed lights, 3; smaller lights, 54; total, 77.

2. The following were in the employ of this division for the care and maintenance of the above lights July 1, 1904: Keepers in charge and assistants, 93; apprentices, 19; boatmen, 40.

The following changes have been made during the two months mentioned: Keepers discharged, 3; apprentices discharged, 4; boatmen discharged, 3; keepers employed, 3; apprentices employed, 8; boatmen employed, 7; apprentices promoted to keepers, 2.

There were in the employ of this division August 31, 1904, 95 keepers in charge and assistants, 21 apprentices, and 44 boatmen.

3. There has been 1 buoy placed over the wreck of the schooner *Marina* in Manila Bay. The temporary buoy at San Bernardino went adrift in July, and there still remains 63 buoys in position.

4. No new beacons have been established during the two months mentioned, and as the beacon on San Nicolas Shoal has been lighted, and is now included in the list of flashing lights, there are 18 beacons at present.

5. The light-house tender *Corregidor* was hauled up on the slipway at Canacao in August. Her tail shaft was hauled in and propeller removed for examination. A slight corrosion was found under the after end of the sleeve, and it was decided that although the shaft was not bad enough to condemn, and could be used as a spare shaft, it was nevertheless considered advisable to put in a new shaft, which was done. The vessel's bottom was recaulked to deep load line and resheathed throughout with 1,240 sheets of Muntz metal. The rudder post was renewed and shoe refitted. The rolling chocks were repaired and 83 linear feet of planking renewed, as well as 87 linear feet of false keel. The latter repairs were found necessary, owing to injuries sustained in stranding at Burias in February and Cuyo in April, 1904. One-eighth of an inch was planed off the journals. A separate discharge valve and pipe from evaporator was fitted, the piping from fresh-water tanks was renewed, the steam and exhaust pipes were covered with asbestos, the ceiling in bunkers was removed, the frames in that space were cleaned and painted, and the ceiling replaced and calked. In addition to the usual docking repairs, such as grinding in sea valves, etc., several minor repairs in deck and engine departments were executed. The total cost of docking and repairing was 12,031.70 pesos, Philippine currency.^a During the past two months she has made 34 visits to light stations, carrying construction material, light-house supplies, etc., steaming 2,192 miles on a consumption of 187 tons of coal.

The light-house tender *Picket* had no extraordinary repairs done on her, with the exception of renewing the iron deck over engine and fire rooms, at a cost of 1,450 pesos, Philippine currency.^b She has placed 1 new buoy, overhauled, painted, and replaced 2, and has

^a This bill was not paid during August.

^b This amount was carried in the outstanding liabilities in the annual report for fiscal year ending June 30, 1904.

made 17 visits to light stations, carrying construction material, light-house supplies, etc., steaming 1,000 miles on a consumption of 45 tons of coal.

The light-house tender *Romblon* was formally invoiced to this division July 1, 1904, by the division of vessels. She has overhauled, painted, and replaced 1 buoy, made 37 visits to light stations, and steamed 2,654 miles on a consumption of 160 tons of coal.

6. Act 1225, enacted August 31, 1901, has authorized the increase of the salaries of first officers and first assistant engineers of cutters from \$900 to \$1,020 per annum, second officers of cutters from \$720 to \$840 per annum, and mates of seagoing launches from \$600 to \$840 per annum. The crews of each of the cutters (*Corregidor* and *Romblon*) have been increased by 2 sailors, and the crew of the *Picket* (seagoing launch) has been increased by 1 sailor.

The expenses (by actual disbursements of money and issue of supplies) for the two months mentioned are as follows:

Light-house tender *Corregidor*:

Salary and subsistence.....	P 2,561.96	
Coal (cost).....	2,591.82	
Supplies.....	733.73	
Incidental expenses.....	15.00	
		P 5,902.51

Light-house tender *Romblon*:

Salary and subsistence.....	2,421.26	
Coal (cost).....	2,217.60	
Repairs.....	75.00	
Supplies.....	1,600.12	
		6,313.98

Light-house tender *Picket*:

Salary and subsistence.....	1,227.01	
Coal (cost).....	623.70	
Repairs.....	16.50	
Supplies.....	520.47	
Incidental expenses.....	7.95	
		2,395.63

Total.....		14,612.12
Salaries of light stations.....	1,724.49	
Supplies of light stations.....	3,921.91	
		5,646.40
Buoyage.....		3,368.41
		23,626.93

Grand total.....

Very respectfully,

ALEX. FRANKLYN,
Light-House Inspector.

REPORT OF THE DIVISION OF VESSELS.

BUREAU OF COAST GUARD AND TRANSPORTATION, DIVISION OF VESSELS.

Commander J. M. HELM, U. S. NAVY,

Chief of Bureau of Coast Guard and Transportation, Manila, P. I.

SIR: I have the honor to submit the following report of the division of vessels, bureau of coast guard and transportation, from July 1, 1903, to June 30, 1904:

OFFICE.

The division at the beginning of the fiscal year was under the supervision of Mr. William Howe, who resigned on March 6, 1904, and was succeeded by the present incumbent.

The work of the division has steadily grown and has been subdivided as follows: Executive subdivision, pay subdivision, property subdivision.

PERSONNEL OF THE COAST-GUARD FLEET.

The cutters and sea-going launches continue to be manned by American and European officers, and their services, generally, have been satisfactory. They are rated as follows: Cutters, captain, first officer, second officer, chief engineer, assistant engineer, and postal clerk; sea-going launches, master, mate, and chief engineer.

The cutters carry a crew of 31 enlisted men, all of them being Filipinos, except the mess servants, who are, in some cases, Chinese.

On account of having twin screws, the cutters *Romblon* and *Marinduque* carry an additional machinist.

The sea-going launches carry a crew of 16 enlisted men.

POSTAL CLERKS.

Each cutter when placed on a regular route has a postal clerk assigned to her, who combines the duties of postal and freight clerk and purser.

ARMAMENT OF THE COAST-GUARD FLEET.

The division has 28 1-pounder Hotchkiss rapid-fire guns and 10 .30 caliber Gatling guns. The armament of each cutter consists of 2 Hotchkiss 1-pounder rapid-firing guns and 1 Gatling gun. The division still needs 2 Hotchkiss 1-pounder rapid-fire guns and 5 Gatling guns to complete the armament.

Recently the bureau bought 250 Springfield carbines, caliber .45, with accessories, and 129 Colt's revolvers, caliber .45, with belts and holsters, from the Philippines Constabulary.

The following list shows the guns and small arms on board each vessel:

Name.	Hotchkiss, 1-pounder.	Gatling gun.	Carbines, caliber .45.	Revolvers, caliber .45.

NEGROS.

(Capt. C. H. Reissar.)

She arrived in Manila Bay on September 13, 1902, from the builders, Farnham, Boyd & Co., and was immediately put in commission and placed under the command of Capt. John G. Fels.

During the same month she was assigned to duty on route No. 2, which covers a run from Manila to Surigao, stopping when necessary at Canauay light-house.

On August 22, 1903, she sighted the customs launch *Sea Gull* stranded on a reef in San Juanico Straits and assisted in getting her off.

On September 23, 1903, Captain Fels was transferred with his officers and crew to the coast-guard cutter *Samar*, and Capt. H. C. Reissar was placed in command.

On September 28, 1903, she was ordered to proceed to the east coast of Samar to gather up the presidentes of the different towns to take them to Tacloban for the annual election of provincial governor.

On October 18, 1903, after she had returned all presidentes to their respective towns, she reported for duty to the provincial governor of Negros Occidental, for the purpose of distributing rice to the provinces.

She returned to Manila to undergo repairs on October 31, 1903.

On November 12, 1903, she went on the slip at Cañacao and finished recoppering bottom and other repairs on November 20, 1903, then made ready to go to sea on route No. 1, running between Manila and Aparri, stopping when necessary at Cape Bojeador and Cape Engaño light-houses.

On December 20, 1903, she proceeded with a party of light-house constructors to Apo Island and on January 8, 1904, was ordered to proceed to Sorsogon to bring to Manila Judge Carson and 150 prisoners for Bilibid Prison.

made 17 visits to light stations, carrying construction material, light-house supplies, etc., steaming 1,000 miles on a consumption of 45 tons of coal.

The light-house tender *Romblon* was formally invoiced to this division July 1, 1904, by the division of vessels. She has overhauled, painted, and replaced 1 buoy, made 37 visits to light stations, and steamed 2,654 miles on a consumption of 160 tons of coal.

6. Act 1225, enacted August 31, 1904, has authorized the increase of the salaries of first officers and first assistant engineers of cutters from \$900 to \$1,020 per annum, second officers of cutters from \$720 to \$840 per annum, and mates of seagoing launches from \$600 to \$840 per annum. The crews of each of the cutters (*Corregidor* and *Romblon*) have been increased by 2 sailors, and the crew of the *Picket* (seagoing launch) has been increased by 1 sailor.

The expenses (by actual disbursements of money and issue of supplies) for the two months mentioned are as follows:

Light-house tender *Corregidor*:

Salary and subsistence.....	P 2,561.96	
Coal (cost).....	2,591.82	
Supplies.....	733.73	
Incidental expenses.....	15.00

ALEX. FRANKLYN,
Light-House Inspector.

REPORT OF THE DIVISION OF VESSELS.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF VESSELS.

Commander J. M. HELM, U. S. Navy,
Chief of Bureau of Coast Guard and Transportation, Manila, P. I.

SIR: I have the honor to submit the following report of the division of vessels, bureau of coast guard and transportation, from July 1, 1903, to June 30, 1904:

OFFICE.

The division at the beginning of the fiscal year was under the supervision of Mr. William Howe, who resigned on March 6, 1904, and was succeeded by the present incumbent.

The work of the division has steadily grown and has been subdivided as follows: Executive subdivision, pay subdivision, property subdivision.

PERSONNEL OF THE COAST-GUARD FLEET.

The cutters and sea-going launches continue to be manned by American and European officers, and their services, generally, have been satisfactory. They are rated as follows: Cutters, captain, first officer, second officer, chief engineer, assistant engineer, and postal clerk; sea-going launches, master, mate, and chief engineer.

The cutters carry a crew of 31 enlisted men, all of them being Filipinos, except the mess servants, who are, in some cases, Chinese.

On account of having twin screws, the cutters *Romblon* and *Marinduque* carry an additional machinist.

The sea-going launches carry a crew of 16 enlisted men.

POSTAL CLERKS.

Each cutter when placed on a regular route has a postal clerk assigned to her, who combines the duties of postal and freight clerk and purser.

ARMAMENT OF THE COAST-GUARD FLEET.

The division has 28 1-pounder Hotchkiss rapid-fire guns and 10 .30 caliber Gatling guns. The armament of each cutter consists of 2 Hotchkiss 1-pounder rapid-firing guns and 1 Gatling gun. The division still needs 2 Hotchkiss 1-pounder rapid-fire guns and 5 Gatling guns to complete the armament.

Recently the bureau bought 250 Springfield carbines, caliber .45, with accessories, and 129 Colt's revolvers, caliber .45, with belts and holsters, from the Philippines Constabulary.

The following list shows the guns and small arms on board each vessel:

Name.	Hotchkiss, 1-pounder.	Gatling gun.	Carbines, caliber .45.	Revolvers, caliber .45.

NEGROS.

(Capt. C. H. Reissar.)

She arrived in Manila Bay on September 13, 1902, from the builders, Farnham, Boyd & Co., and was immediately put in commission and placed under the command of Capt. John G. Fels.

During the same month she was assigned to duty on route No. 2, which covers a run from Manila to Surigao, stopping when necessary at Canauay light-house.

On August 22, 1903, she sighted the customs launch *Sea Gull* stranded on a reef in San Juanico Straits and assisted in getting her off.

On September 23, 1903, Captain Fels was transferred with his officers and crew to the coast-guard cutter *Samar*, and Capt. H. C. Reissar was placed in command.

On September 28, 1903, she was ordered to proceed to the east coast of Samar to gather up the presidentes of the different towns to take them to Tacloban for the annual election of provincial governor.

On October 18, 1903, after she had returned all presidentes to their respective towns, she reported for duty to the provincial governor of Negros Occidental, for the purpose of distributing rice to the provinces.

She returned to Manila to undergo repairs on October 31, 1903.

On November 12, 1903, she went on the slip at Cañacao and finished recoppering bottom and other repairs on November 20, 1903, then made ready to go to sea on route No. 1, running between Manila and Aparri, stopping when necessary at Cape Bojador and Cape Engaño light-houses.

On December 20, 1903, she proceeded with a party of light-house constructors to Apo Island and on January 8, 1904, was ordered to proceed to Sorsogon to bring to Manila Judge Carson and 150 prisoners for Bilibid Prison.

made 17 visits to light stations, carrying construction material, light-house supplies, etc., steaming 1,000 miles on a consumption of 45 tons of coal.

The light-house tender *Romblon* was formally invoiced to this division July 1, 1904, by the division of vessels. She has overhauled, painted, and replaced 1 buoy, made 37 visits to light stations, and steamed 2,654 miles on a consumption of 160 tons of coal.

6. Act 1225, enacted August 31, 1904, has authorized the increase of the salaries of first officers and first assistant engineers of cutters from \$900 to \$1,020 per annum, second officers of cutters from \$720 to \$840 per annum, and mates of seagoing launches from \$600 to \$840 per annum. The crews of each of the cutters (*Corregidor* and *Romblon*) have been increased by 2 sailors, and the crew of the *Picket* (seagoing launch) has been increased by 1 sailor.

The expenses (by actual disbursements of money and issue of supplies) for the two months mentioned are as follows:

Light-house tender <i>Corregidor</i> :		
Salary and subsistence.....	P 2,561.96	
Coal (cost).....	2,591.82	
Supplies.....	733.73	
Incidental expenses.....	15.00	
		P 5,902.51
Light-house tender <i>Romblon</i> :		
Salary and subsistence.....	2,421.26	
Coal (cost).....	2,217.60	
Repairs.....	75.00	
Supplies.....	1,600.12	
		6,313.98
Light-house tender <i>Picket</i> :		
Salary and subsistence.....	1,227.01	
Coal (cost).....	623.70	
Repairs.....	16.50	
Supplies.....	520.47	
Incidental expenses.....	7.95	
		2,395.63
Total.....		14,612.12
Salaries of light stations.....	1,724.49	
Supplies of light stations.....	3,921.91	
		5,646.40
Buoyage.....		3,368.41
Grand total.....		23,626.93

Very respectfully,

ALEX. FRANKLYN,
Light-House Inspector.

REPORT OF THE DIVISION OF VESSELS.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF VESSELS.

Commander J. M. HELM, U. S. Navy,
Chief of Bureau of Coast Guard and Transportation, Manila, P. I.

BUREAU OF COAST GUARD AND TRANSPORTATION,
OFFICE OF THE LIGHT-HOUSE INSPECTOR,
Manila, P. I., September 16, 1904.

CHIEF OF BUREAU OF COAST GUARD AND TRANSPORTATION,
Manila, P. I.

SIR: The division of light-house maintenance has the honor to submit the following report for the months of July and August of 1904, supplemental to the annual report for fiscal year ending June 30, 1904:

1. There has been one flashing light established on San Nicolas Shoal, Manila Bay, sixth order, making the total number of lights under control of this division August 31, 1904, as follows: Flashing lights, 20; fixed lights, 3; smaller lights, 54; total, 77.

2. The following were in the employ of this division for the care and maintenance of the above lights July 1, 1904: Keepers in charge and assistants, 93; apprentices, 19; boatmen, 40.

The following changes have been made during the two months mentioned: Keepers discharged, 3; apprentices discharged, 4; boatmen discharged, 3; keepers employed, 3; apprentices employed, 8; boatmen employed, 7; apprentices promoted to keepers, 2.

There were in the employ of this division August 31, 1904, 95 keepers in charge and assistants, 21 apprentices, and 44 boatmen.

3. There has been 1 buoy placed over the wreck of the schooner *Marina* in Manila Bay. The temporary buoy at San Bernardino went adrift in July, and there still remains 63 buoys in position.

4. No new beacons have been established during the two months mentioned, and as the beacon on San Nicolas Shoal has been lighted, and is now included in the list of flashing lights, there are 18 beacons at present.

5. The light-house tender *Corregidor* was hauled up on the slipway at Canacao in August. Her tail shaft was hauled in and propeller removed for examination. A slight corrosion was found under the after end of the sleeve, and it was decided that although the shaft was not bad enough to condemn, and could be used as a spare shaft, it was nevertheless considered advisable to put in a new shaft, which was done. The vessel's bottom was recalked to deep load line and resheathed throughout with 1,240 sheets of Muntz metal. The rudder post was renewed and shoe refitted. The rolling chocks were repaired and 83 linear feet of planking renewed, as well as 87 linear feet of false keel. The latter repairs were found necessary, owing to injuries sustained in stranding at Burias in February and Cuyo in April, 1904. One-eighth of an inch was planed off the journals. A separate discharge valve and pipe from evaporator was fitted, the piping from fresh-water tanks was renewed, the steam and exhaust pipes were covered with asbestos, the ceiling in bunkers was removed, the frames in that space were cleaned and painted, and the ceiling replaced and calked. In addition to the usual docking repairs, such as grinding in sea valves, etc., several minor repairs in deck and engine departments were executed. The total cost of docking and repairing was 12,031.70 pesos, Philippine currency.^a During the past two months she has made 34 visits to light stations, carrying construction material, light-house supplies, etc., steaming 2,192 miles on a consumption of 187 tons of coal.

The light-house tender *Picket* had no extraordinary repairs done on her, with the exception of renewing the iron deck over engine and fire rooms, at a cost of 1,450 pesos, Philippine currency.^b She has placed 1 new buoy, overhauled, painted, and replaced 2, and has

^a This bill was not paid during August.

^b This amount was carried in the outstanding liabilities in the annual report for fiscal year ending June 30, 1904.

made 17 visits to light stations, carrying construction material, light-house supplies, etc., steaming 1,000 miles on a consumption of 45 tons of coal.

The light-house tender *Romblon* was formally invoiced to this division July 1, 1904, by the division of vessels. She has overhauled, painted, and replaced 1 buoy, made 37 visits to light stations, and steamed 2,654 miles on a consumption of 160 tons of coal.

6. Act 1225, enacted August 31, 1904, has authorized the increase of the salaries of first officers and first assistant engineers of cutters from \$900 to \$1,020 per annum, second officers of cutters from \$720 to \$840 per annum, and mates of seagoing launches from \$600 to \$840 per annum. The crews of each of the cutters (*Corregidor* and *Romblon*) have been increased by 2 sailors, and the crew of the *Picket* (seagoing launch) has been increased by 1 sailor.

The expenses (by actual disbursements of money and issue of supplies) for the two months mentioned are as follows:

Light-house tender <i>Corregidor</i> :	
Salary and subsistence.....	P 2,561. 96
Coal (cost).....	2,591. 82
Supplies.....	733. 73
Incidental expenses.....	15. 00
	<hr/> P 5,902. 51
Light-house tender <i>Romblon</i> :	
Salary and subsistence.....	2,421. 26
Coal (cost).....	2,217. 60

Very respectfully,

ALEX. FRANKLYN,
Light-House Inspector.

REPORT OF THE DIVISION OF VESSELS.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF VESSELS.

Commander J. M. HELM, U. S. Navy,
Chief of Bureau of Coast Guard and Transportation, Manila, P. I.

SIR: I have the honor to submit the following report of the division of vessels, bureau of coast guard and transportation, from July 1, 1903, to June 30, 1904:

OFFICE.

The division at the beginning of the fiscal year was under the supervision of Mr. William Howe, who resigned on March 6, 1904, and was succeeded by the present incumbent.

The work of the division has steadily grown and has been subdivided as follows: Executive subdivision, pay subdivision, property subdivision.

PERSONNEL OF THE COAST-GUARD FLEET.

The cutters and sea-going launches continue to be manned by American and European officers, and their services, generally, have been satisfactory. They are rated as follows: Cutters, captain, first officer, second officer, chief engineer, assistant engineer, and postal clerk; sea-going launches, master, mate, and chief engineer.

The cutters carry a crew of 31 enlisted men, all of them being Filipinos, except the mess servants, who are, in some cases, Chinese.

On account of having twin screws, the cutters *Romblon* and *Marinduque* carry an additional machinist.

The sea-going launches carry a crew of 16 enlisted men.

POSTAL CLERKS.

Each cutter when placed on a regular route has a postal clerk assigned to her, who combines the duties of postal and freight clerk and purser.

ARMAMENT OF THE COAST-GUARD FLEET.

The division has 28 1-pounder Hotchkiss rapid-fire guns and 10 .30 caliber Gatling guns. The armament of each cutter consists of 2 Hotchkiss 1-pounder rapid-firing guns and 1 Gatling gun. The division still needs 2 Hotchkiss 1-pounder rapid-fire guns and 5 Gatling guns to complete the armament.

Recently the bureau bought 250 Springfield carbines, caliber .45, with accessories, and 129 Colt's revolvers, caliber .45, with belts and holsters, from the Philippines Constabulary.

The following list shows the guns and small arms on board each vessel:

Name.	Hotchkiss, 1-pounder.	Gatling gun.	Carbines, caliber .45.	Revolvers, caliber .45.

NEGROS.

(Capt. C. H. Reissar.)

She arrived in Manila Bay on September 13, 1902, from the builders, Farnham, Boyd & Co., and was immediately put in commission and placed under the command of Capt. John G. Fels.

During the same month she was assigned to duty on route No. 2, which covers a run from Manila to Surigao, stopping when necessary at Canauay light-house.

On August 22, 1903, she sighted the customs launch *Sea Gull* stranded on a reef in San Juanico Straits and assisted in getting her off.

On September 23, 1903, Captain Fels was transferred with his officers and crew to the coast-guard cutter *Samar*, and Capt. H. C. Reissar was placed in command.

On September 28, 1903, she was ordered to proceed to the east coast of Samar to gather up the presidentes of the different towns to take them to Tacloban for the annual election of provincial governor.

On October 18, 1903, after she had returned all presidentes to their respective towns, she reported for duty to the provincial governor of Negros Occidental, for the purpose of distributing rice to the provinces.

She returned to Manila to undergo repairs on October 31, 1903.

On November 12, 1903, she went on the slip at Cañacao and finished recoppering bottom and other repairs on November 20, 1903, then made ready to go to sea on route No. 1, running between Manila and Aparri, stopping when necessary at Cape Bojeador and Cape Engaño light-houses.

On December 20, 1903, she proceeded with a party of light-house constructors to Apo Island and on January 8, 1904, was ordered to proceed to Sorsogon to bring to Manila Judge Carson and 150 prisoners for Bilibid Prison.

On January 12, 1904, she returned to duty on route No. 1.

On January 22, 1904, she picked up at sea a capsized native viray and rescued some 10 people thereon, and towed the wreck to San Esteban.

While anchored at Vigan, Ilocos Sur, about 8 p. m. of February 8, 1904, some constabulary soldiers revolted, looted the commissary, killed a native guard, cut the telegraph wires, liberated the prisoners incarcerated in the provincial jail, attacked the American inhabitants and terrorized the community. On this account the next few days were occupied by this cutter in running between Vigan, Salomague, in transposing constabulary to the scene of the outbreak.

The *Polillo* and *Basilan* also were sent to the neighborhood of Vigan at that time, and for several days assisted the military authorities in running down the renegade constabularios and the native civilians who were persuaded to join their ranks.

Negros remained on route No. 1 until June 23, 1904, when she was ordered to proceed to Cañacao Bay to be docked and repaired.

LUZON.

(Capt. John Foster.)

From July 1 to 6, 1903, she was on duty with the constabulary. On July 7, 1903, she was ordered to take up route No. 9, with headquarters at Cebu, and remained on this station until December 5, 1903, when she was relieved by the coast-guard cutter *Samar*, and returned to Manila over route No. 2.

After her arrival at Manila she was ordered to proceed to Cañacao, and from December 16 to 23, inclusive, she was on the slip. Her bottom was repaired and the vessel found to be in fairly good condition after long service among the southern islands. On December 31 her repairs were finished and she made ready to go to sea.

On January 26, 1904, she sailed with the penitentiary-site committee to Burias Island, Port Concepcion (Maestro de Campo), Port Busin (Burias Island), Port Santo Niño (Linbacanayan Island), Libulan Bay (Daco Island), Catbalogan, Camud Bay (Samar), Cebu, Zamboanga, Port Isabela, Pilas Island, Jolo, Siassi, Sandakan, Cagayan (Jolo), Lapun Island, Puerta Princesa, Cuyo, Iloilo, and Caluya Island. The party consisted of Colonel Baker, Philippines Constabulary; Mr. H. Wolf, warden of Bilibid Prison, and Mr. Bourne, chief of the bureau of architecture. She returned to Manila February 25, 1904.

On March 1 she made a trip over route No. 2, and on her return was anchored behind the breakwater and was given a general overhauling.

During April, 1904, she made three special trips to San Fernando de Union, on account of the civil commission being in session at Baguio, Benguet.

On May 17 she proceeded to Laguimanoc Bay, Batangas Province, with road supplies for the insular purchasing agent (including blasting powder, etc.), and on her return to Manila she made another trip to San Fernando de Union to return the clerks of the executive bureau to Manila.

On May 31, 1904, she went on the slip at Cañacao Bay, and it was found that her shaft was in bad shape owing to galvanic action caused by bad connection between propeller and tail shaft, and it had to be replaced. She remained there until the end of June, 1904, receiving a new tail shaft and propeller.

POLILLO.

(Capt. P. Leblond.)

From July 1, 1903, to August 1, 1903, this cutter was on duty with the constabulary under Colonel Bandholtz at Legaspi. On August 1 she was assigned to regular work on route No. 4, with headquarters at Legaspi.

In October, 1903, she was examined by divers at Cavite Navy-Yard and some of her copper was replaced.

On November 18, 1903, she received orders to go to the southern islands on a tour of inspection of the public schools with Doctor Barrows, general superintendent of schools, and Doctor Freer, superintendent of government laboratories, returning to Manila on December 17, 1903.

On December 18, 1903, she was ordered to go in search of the coast-guard cutter *Mindanao*, who had lost her propeller off Santa Cruz. She returned to Manila the same day, the *Mindanao* having been taken in tow by the coast-guard cutter *Masbate*.

On February 9, 1904, she took Colonel Scott, Philippines Constabulary, and a detachment of constabulary soldiers to Vigan, in connection with the constabulary mutiny at that place, and returned to Manila the latter part of the month.

From March 1 to 8 she was on the marine railway at Cañacao, and after finishing her repairs she sailed on the 15th over route No. 2. On arrival at Surigao she relieved the coast-guard cutter *Samar* on route No. 9.

She remained on this run until the end of June, 1904, with the exception of making a special trip from Cebu to Manila with Roman Catholic Bishop Hendricks on board, by order of the civil governor.

MASBATE.

(Capt. F. F. Stewart.)

From July 1, 1903, to August 20, 1903, she was on special duty at Manila. On August 20, 1903, she relieved the coast-guard cutter *Balabac* on route No. 3.

On September 11, 1903, she sailed for Sorsogon and brought to Manila a company of scouts.

On September 13, 1903, she sailed for Iba and Santa Cruz with 2,000 sacks of rice for the insular purchasing agent. After the rice was unloaded prisoners were taken on board at these places and landed at Dagupan.

On September 21, 1903, she was assigned to duty on route No. 1, on account of the government traffic along the northern and western coast of Luzon growing to such an extent that it was considered necessary to have two cutters to handle it.

She was relieved from this run on January 1, 1904, and proceeded with Captain Davies, local purchasing agent, and Mr. Washburn, manager of the government stock farm, to Busainga, Burias Island. After she returned from this detail she was again placed on her usual run until relieved on February 6 to go on the slip at Cañacao Bay.

From February 15 to 20, 1904, she was on marine railway having her bottom repaired.

On February 24, 1904, she returned to duty on route No. 1, where she remained until April 8, when she was ordered to take Major Shields, insular purchasing agent, and Major Townsend on a tour of inspection of the insular government coaling stations in the southern islands, visiting the following ports: Romblon, Sorsogon, Magallanes, Legaspi, Calbayog, Tacloban, Ormoc, Cebu, Iligan, Zamboanga, Jolo, Sandakan, Borneo, Balabac, Iloilo, and Calapan.

While returning with the above party, three weeks later, on May 1, 1904, she lost her propeller off the northern coast of Mindoro, and on the following day arrived at Manila in tow of the coast-guard cutter *Luzon*.

From June 12 to 16, 1904, she was on the slip at Cañacao, where a new propeller and tail shaft were fitted, and on the 23d she went on her trial trip and made ready to go on route No. 1 on July 1, 1904.

BUSUANGA.

(Capt. F. M. White.)

After doing special duty for the government, she was detailed on route No. 1 until October 24, 1903, when she was ordered to take up route No. 10. While on this route, on October 27, 1903, between Masbate and Cebu, she picked up five men from a capsized banca and turned them over to the collector of customs at Cebu.

During the month of November, 1903, her bottom was repaired and recoppered. She was on the slip at Cañacao from the 24th to the 30th. After being repaired she was put into service and returned to take up route No. 10.

On March 14, 1904, while at Zamboanga, she relieved the coast-guard cutter *Palawan* on route No. 8. She remained on this station until April 15, 1904, when she was relieved by the coast-guard cutter *Mindanao* and returned to Manila over route No. 10.

On April 17, 1904, she lost her propeller off the coast of Negros; at the same time her main steam pipe burst. On the same day she was picked up by the coast-guard cutter *Basilan* and towed to Manila.

On May 23, 1904, Captain Mason resigned and Capt. F. M. White was placed in command.

During the month of June, 1904, she was anchored off Cañacao Bay, waiting to go on the slip. On June 17, 1904, she was docked, and a new shaft and propeller were fitted.

On June 30, 1904, she went on a trial trip, and was placed at once in active service on route No. 10, relieving the coast-guard cutter *Basilan*.

BALABAC.

(Capt. P. J. C. Schoon.)

On July 1, 1903, this cutter was detailed to duty on route No. 2. On August 14 she went to Cavite Navy-Yard, had her bottom examined, and minor repairs made to her hull.

On August 28, 1903, she went on the slip at Cañacao, and on September 19 returned to duty on route No. 2.

On October 1, 1903, she was detailed on special duty with the collector of customs, cruising in foreign waters under secret orders. She made investigation of Pratas Reef; then on account of a typhoon approaching she ran to Hongkong for shelter and coal. She

returned to Manila on the 13th, and on the following day proceeded to Lanao River for the forestry bureau.

On November 9, 1903, she sailed for the southern islands with Commissioner Luzuriaga and Doctor Freer, returning on the 25th.

On November 28, 1903, she sailed for Subig Bay with 1,000 sacks of rice, and after unloading this freight she went to Sual to bring 57 prisoners, sentenced to terms in Bilibid prison, to Manila.

On December 15, 1903, she proceeded over route No. 2 to Tacloban, where she exchanged routes with coast-guard cutter *Basilan* on route No. 7.

While on this run, on February 18, 1904, she sailed with Captain Hunt, Philippines Constabulary, and reinforcements for the constabulary, from Catbalogan, for duty on the east coast of Samar, on account of the uprising of the Pulijanes. On the 24th, when the town of Borongan was surprised by a band of ladrones, a party of coast-guard sailors was landed in command of the first officer to help out the constabulary at that point.

On June 6, 1904, she was relieved by coast-guard cutter *Leyte* at Tacloban, returning to Manila over route No. 2 to have her propeller and tail shaft examined. The end of June finds her in Cañacao Bay, waiting her turn to go on the slip.

PALAWAN.

(Capt. William Wetherell.)

During July, 1903, she was doing special duty for the government among the different islands.

On July 15 Vice-Governor Wright left for Legaspi and Tabaco, returning to Manila on the 20th.

On July 23, 1903, she was placed on the slip at Cañacao to have her bottom repaired.

During August she left for a tour of inspection of light-houses, having Captain Franklyn, superintendent of light-house service, and Mr. H. B. Hatfield, pay officer of the fleet, on board.

On August 26 she left Manila, carrying 11 tons of the new currency for the treasury department for distribution among the southern islands.

On September 10 she was assigned to duty on route No. 10 and relieved the coast-guard cutter *Tablas* on route No. 8, with headquarters at Zamboanga.

On November 9, 1903, while on this station, she assisted the distressed launch *Carandugue* and towed her to Cottabato.

On the following day, at the request of General Wood, military governor of the Moro provinces, she took on board four companies of the Fourth Infantry, and, in company with the coast-guard launch *Ranger*, U. S. army transports and U. S. navy gunboats, proceeded to Catayuma and landed the troops at the place.

Fighting with the Moros commenced as soon as the troops were landed. She then returned to Zamboanga.

On December 27, 1903, while running on this route, she sighted the U. S. S. *Quiros* ashore on Pearl Bank, and at once hove to and gave her all the assistance possible, taking off guns, ammunition, etc., and was requested by the commanding officer of the *Quiros* to proceed to Sandakan to wire for help and to get divers.

In January, 1904, she towed the *Quiros* to Sandakan and returned to her regular run.

On March 11, 1904, she was relieved by coast-guard cutter *Busuanga* and returned to Manila.

On March 22 Captain McLeod resigned and Capt. William Wetherell was placed in command.

On April 4 she proceeded to Tabaco, thence to Carao Bay, to tow to Manila the disabled cutter *Leyte*, which had lost her propeller off the east coast of Luzon.

On March 20, 1904, she was assigned to duty on route No. 4, and while on this run picked up 40 scouts at Virac and transferred them to Palawan Bay.

On her return trip to Manila she called at Laguan Bay, Bataan Island, and took on board 28 tons of coal from the newly-opened mines for trial. This coal has given good results, with the exception that the consumption is greater than with the Japanese or Australian coals.

On June 30, 1904, she was in Manila Bay getting ready to return to duty on route No. 4.

BASILAN.

(Capt. Thomas A. Hillgrove.)

On June 6, 1903, Captain Dorris resigned and Capt. Thomas A. Hillgrove was placed in command.

On July 10, 1903, she was sent to duty on route No. 7, with headquarters at Tacloban, where she remained until December 17, when she exchanged routes with the coast-guard cutter *Balabac*, returning to Manila over route No. 2.

At the beginning of January, 1904, she was anchored off Cavite Navy-Yard and had her bottom repaired and cleaned and a few sheets of copper replaced.

On January 25 she sailed over route No. 10. On her return from this run she was ordered to report to Colonel Scott, Philippines Constabulary, at Vigan, in connection with the constabulary mutiny at that place, and returned from that detail on March 5, 1904.

From March 10 to March 12 she was on the slip at Cañacao Bay and was given a general overhauling.

On March 21 she sailed, with two lighters in tow, to Cebu and relieved the coast-guard cutter *Marinduque* on route No. 6.

While on this route, on April 17 she picked up the disabled cutter *Busuanga* off the coast of Negros and towed her to Manila.

During the months of May and June, 1904, she was assigned to duty on route No. 10, with headquarters at Manila.

TABLAS.

(Capt. James Miller.)

On July 1, 1903, she was assigned to duty on route No. 8, with headquarters at Zamboanga. Her work on this run proved to be very valuable.

She was relieved by the coast-guard cutter *Palawan* on September 23, 1903, and returned to Manila over route No. 10.

During October, 1903, she was undergoing repairs, and on the 9th instant made ready to go to sea under sealed orders.

On October 11 she proceeded to San Fernando and returned to Manila with Judge Odlin and party. On the 19th divers at Cavite examined her bottom and it was decided that she could not be repaired without docking her.

From November 12 to 23 she was on the slip at Cañacao and had her bottom recoppered, her false keel renewed, and was given a general overhauling. On the 23d she made ready to go on route No. 10.

On December 17 she received orders to proceed north in company with coast-guard cutter *Masbate* in search of the disabled cutter *Mindanao*, and after she had found that vessel off the coast of Zambales Province she took off the passengers and proceeded up north as far as Aparri, returning to Manila over route No. 1.

On December 30, 1903, according to orders from the civil governor, she proceeded to Albay with 43 Japanese laborers, and returned to Manila with Judge Blount and prisoners.

In the annual report of a year ago no mention was made of the work of the cutter *Tablas*, which, in April, 1903, hunted up the derelict *Prince George* on the east side of Basilan Island. This barkentine, of Christiania, Norway, left London eleven months previous with a cargo of pitch in bulk. Hot weather melted the pitch and caused the vessel to become unmanageable, and she was abandoned on March 8, 1903, after an attempt was made to scuttle her.

The crew was sick with beriberi and upon landing at Zamboanga on April 11, 1903, received medical attention from the military authorities, and later came on to Manila. On April 14, 1903, the *Prince George* was brought to Zamboanga by the *Tablas*. The captain of the *Tablas* reported:

"The vessel was found with all sail set, adrift, and abandoned, 2 miles southeast of Dipolod Island, Samales Group. On boarding the vessel there was found to be 11 feet of water in her, rising 2 feet above cargo in lower hold. Before leaving the ship the crew had cut a hole through her side. This hole was soon found, cold chisels and hammers near by indicating its location. The hole was plugged and ship cleared of water in four hours by her own pumps. Both anchors had been let go, with 25 fathoms of chain on each, but had not touched bottom. She is an iron vessel of 472 tons net, with a cargo of 850 tons of pitch in bulk, etc."

On January 1, 1904, she left Manila for the southern islands, being detailed for special customs service, with headquarters at Jolo. At the end of the fiscal year she was still assigned to this duty and was rendering excellent service to the bureau of customs.

Since January, 1904, the *Tablas*, with a special customs officer aboard, has cruised around the Sulu Archipelago endeavoring to break up the smuggling trade from Borneo, etc. She has seized a great many sapits and much contraband cargo.

ROMBLON.

(Capt. John Hennings.)

On the arrival of the cutter *Romblon* she was immediately placed in commission under the command of Captain Cahling and assigned to duty with the constabulary.

During the month of July, 1903, she was anchored at Cavite Navy-Yard undergoing repairs.

On August 1 she was assigned to route No. 5 with headquarters at Iloilo.

On October 12 she was relieved from this run and ordered to report to Colonel Taylor, Philippines Constabulary, in connection with the hunting down of the two constabulary officers, Herman and Johnson.

After this detail she was assigned to the governor of Negros Occidental to bring to Bacolod the presidents of the different towns for the election of provincial governor.

On January 1, 1904, she was in Manila undergoing general repairs.

On February 1 Captain Cahling was relieved and Captain Eaton was placed in command; the latter entered the civil hospital and First Officer Hennings was placed in command. On the 2d she proceeded with light-house construction material to Calabazas, Luzaran, and Maniguin islands.

On February 27, 1904, Captain Eaton resigned and First Officer John Hennings was placed permanently in command.

During the months of April, May, and June she was doing special duty with the light-house construction division, and on July 1, 1904, by authority of the civil governor, this vessel, together with all equipments, was invoiced to the light-house inspector, and the officers and crew transferred.

MARINDUQUE.

(Capt. H. Leube.)

This cutter was on special duty with the forestry bureau until July 10, 1903, when she was detailed on route No. 6, with headquarters at Cebu.

On March 27, 1904, she was relieved by the coast-guard cutter *Basilan*, and returned to Manila to be repaired.

On April 1 Captain Wetherell was relieved and Captain H. Leube was placed in command. On May 1 she returned to her station on route No. 6, and on the 6th First Officer Hennschien was placed in command, Captain Leube having received injuries which necessitated his entering the civil hospital in Manila.

For the remainder of the fiscal year she did duty on route No. 6.

MINDANAO.

(Capt. A. R. Cahling.)

She was received on August 21, 1903, and placed under the command of Capt. J. Eaton.

During the month of September, 1903, she made trips to Dagupan with prisoners, guards, and money for the construction of Benguet road.

On September 14 she sailed for the Lanao River for the forestry bureau, and from there to Lucena with the disbursing officer of the census bureau; thence to San Juan de Booboc with Commissioner Legarda and his secretary.

On the 20th she sailed with a large amount of constabulary commissaries and supplies for Calapan, Nasugbu and Lucena, and on the 29th sailed for Iba and Salamatague with 1,000 sacks of rice for the insular purchasing agent.

On October 12 she was ordered on route No. 1 to relieve cutter *Busuanga*, and while at Aparri was caught in the typhoon that was blowing at that time. She proved herself to be a good sea boat and no damage was done to her.

On December 16 while on this detail, off the coast of Zambales, she lost her propeller, but on the following day she was picked up by the coast-guard cutter *Masbate* and towed to Manila. Her passengers were transferred to the coast-guard cutter *Tablas*.

At the beginning of January, 1904, she was at Cañacao Bay waiting to go on the slip. She was hauled out on the 13th, and placed in the water again on the 16th. A propeller having been put on, she was made ready for active service.

On January 22 Captain Eaton was relieved and Captain Cahling was placed in command.

On February 3 she sailed for Laguimanoc, Batangas, with men and materials for the insular purchasing agent, and towed two lighters to Romblon.

On March 24 she was detailed for duty on route No. 10, and on April 15 she relieved the coast-guard cutter *Busuanga* on route No. 8 with headquarters at Zamboanga, where she is still.

SAMAR.

(Capt. Peter Olsen.)

She arrived in Manila Bay on September 18, 1903, and was placed temporarily under the command of Capt. H. C. Reissar, until the 23d, when Capt. John C. Fels of coast-guard cutter *Negros* took charge.

On October 1 she was on duty on route No. 2 until December 5, when at Surigao, she was relieved by coast-guard cutter *Luzon*, taking up route No. 9 with headquarters at Cebu.

While on this run, on January 4, 1904, she sighted a large banca flying distress signals. She towed her to Mambajo, leaving her in charge of the customs authorities.

On the 9th of the same month, while passing Cagayan, she sighted the U. S. army transport *Kingsley* on a reef in Murcielagos Bay. She at once hove to, and the captain was requested to take off the passengers and crew, as the *Kingsley* was rapidly breaking up. All passengers were safely landed at Cagayan, and the *Samar* returned to the wreck to save, if possible, freight and property, but she could do nothing, as the seas were running high. The *Kingsley* was left on the reef and pronounced a total loss.

On the 19th the *Samar* overhauled the schooner *Albertaite* and investigated her papers, which were found regular, and she was allowed to proceed on her way.

On the 20th she was relieved by the coast-guard cutter *Polillo* and returned to Manila over route No. 2, and on the 26th Captain Fels was detailed on shore duty, and Capt. P. Olsen was placed in command.

At the close of the year she is still running on route No. 2.

MINDORO.

(Capt. H. C. Anderson.)

She arrived from Shanghai on September 18, 1903, and was placed under the command of Capt. F. C. Ryer.

On the 24th of September she proceeded to San Fernando de Union for the purpose of bringing to Manila the officials and prisoners connected with the Tompkins trial.

On the 30th she was assigned to duty on route No. 3, relieving the coast-guard cutter *Balabac*.

During the month of October, 1903, she was doing duty on route No. 3, and on the 13th she overtook a native boat at Dalawan Bay acting suspiciously; her papers were examined and found to be regular and she was released at once.

She remained on route No. 3 until February 1, 1904, when she sailed for Iloilo to bring to Manila 100 natives for the Visayan village concession at the St. Louis Fair. After this detail she made one short trip over route No. 3.

On June 21 Captain Ryer resigned and Capt. H. C. Anderson was placed in command.

On the 27th she sailed over route No. 3.

LEYTE.

(Capt. William N. Fisher.)

She arrived in Manila Bay on October 3, 1903, and was placed in command of Capt. William N. Fisher. She was completely fitted out with stores and supplies and assigned to route No. 10.

On her return trip she was detailed on route No. 4, with headquarters at Legaspi, relieving the coast-guard cutter *Polillo*.

On February 24, 1904, she returned to Manila to repair her windlass.

On April 1, while cruising off the east coast of Luzon, she lost her propeller and sailed for Carao Bay for anchorage, sending the first officer in the ship's boat to Tobacco, where he telegraphed for assistance, and the coast-guard cutter *Palawan* was at once dispatched to her relief, returning with her in tow on April 12, 1904.

During May she was anchored in Cañacao Bay waiting to go on the slip, and on the 16th she was hauled out and her propeller and shaft replaced.

On May 25 she went on a trial trip and made ready to go on route No. 2.

On June 1 she sailed for Tacloban and relieved the coast-guard cutter *Balabac* on route No. 7. The end of June finds her still on this run.

PANAY.

(Capt. William N. Murphy.)

This is the last of the five cutters that were built under the second contract by Farnham, Boyd & Co., and arrived at Manila on October 6, 1903, when she was placed under the command of Capt. William N. Murphy.

She was at once fitted out with stores and supplies and detailed on route No. 5, with headquarters at Iloilo. She remained on this route until June 23, 1904, when she arrived in Manila with the crew of the coast-guard launch *Scout*, which was wrecked off Pandan, Antique.

On June 25 she returned to her station at Iloilo and resumed her regular run.

SEAGOING LAUNCHES.

RANGER.

(Capt. Charles W. B. Maddox.)

At the beginning of the fiscal year she was assigned to the constabulary at Cebu. On the 25th of September, 1903, while running between Dumaguete and Tagbilaran, she noticed the American schooner *Esperanza* flying signals of distress. She stopped and found that the schooner was short of drinking water, which was given to her. On the 28th she was ordered to proceed to Zamboanga to report to Colonel Harbord, Philippines Constabulary, for duty.

On October 1, 1903, she was detailed to pursue the launch *Victoria* with the two renegade Philippines Constabulary officers Hermann and Johnson on board. During this detail she touched the following ports: Sandakan, Zamboanga, Isabela, Cagayan, and Sipalay.

At the last-named port she joined the coast-guard cutter *Romblon* under the orders of Colonel Taylor, Philippines Constabulary. Here one of the Philippines Constabulary officers was found dead. From there she returned to Misamis, where the launch *Victoria* was found.

After being relieved from the above detail she returned to her station at Zamboanga.

On January 5, 1904, she was beached at Pollok and had her bottom repaired, and on the 1st of February returned to her old run.

On March 6, 1904, she towed the quartermaster launch *Detroit* up the Cottabato River, her steering gear being out of order.

She remained under the orders of the constabulary at Zamboanga until June 8, when she came to Manila and was given a general overhauling.

ROVER.

(Capt. Charles W. Lauritzen.)

On the 1st of July, 1903, she was at Manila being repaired, and on the 11th was ordered to proceed to Lucena and report to Colonel Bandholtz, Philippine Constabulary, with headquarters at Lucena.

On January 15, 1904, she came to Manila and was given a general overhauling.

On the 30th she returned to her station at Lucena, where she remained until the end of the fiscal year.

SCOUT.

(Wrecked.)

She was one of the oldest launches operated by this division and was assigned to the constabulary with headquarters at Cebu.

On August 12, 1903, she was ordered to report to Colonel Taylor, Philippine Constabulary, at Iloilo.

She remained there until October 4, when she arrived at Manila to be repaired, and on the 12th was placed on the slip and had her bottom repaired, being ready to go to sea again on the 24th.

On the 27th of the same month she returned to her station at Iloilo. On May 20, 1904, she was ordered by Colonel Taylor, Philippine Constabulary, to report to the governor of Samar for a tour of inspection around the island, calling at such ports as the governor directed.

While lying at anchor off Pandan, Antique Province, Panay, and while under the command of Capt. C. R. Croucher, she was wrecked during a typhoon on June 23, 1904, and is a total loss. The boiler, engines, and a great deal of her fittings were saved later by a wrecking party, which was left on the ground. No lives were lost. The officers and crew were brought to Manila on the coast-guard cutter *Panay*.

PITTSBURG

(Out of commission.)

The *Pittsburg* was received by this bureau from the United States Quartermaster Department on March 1, 1903, and after being repaired and supplied with stores was invoiced to the governor of Misamis Province for duty. On account of the expense of maintaining a launch, the province of Misamis was unable to care for her, and consequently, by authority of the civil governor, she was returned to this bureau on July 21, 1903.

She was again fitted out and assigned to duty on route No. 12 with the constabulary, with headquarters at Lucena.

She was returned to Manila on May 1, 1904, for repairs, but on account of the bad condition

of her hull and engines, she was condemned by a board of survey, her crew discharged, and the officers transferred to other coast-guard vessels.

She is now lying behind the breakwater in the basin at Engineer Island.

TROY.

(Master Charles Yarneberg.)

The *Troy* was originally a quartermaster launch and was invoiced to the governor of Cebu. After about six months service she was released and turned over to this bureau, being received by the division of vessels on January 1, 1904.

She was docked on the slip at Cavite Navy-Yard on January 26, and after a general overhauling made ready to go to sea and assigned to duty with the constabulary at Zamboanga, leaving Manila on April 5, 1904.

On arriving at Zamboanga she was assigned to Colonel Harbord, Philippines Constabulary, and has been doing duty with the constabulary on the south coast of Mindanao ever since.

SENTINEL.

(Master J. G. Mussen.)

The *Sentinel* is a stern-wheel river boat, bought from Farnham, Boyd & Co., and detailed to duty on the Cagayan River, with headquarters at Aparri. She makes from three to five trips a month up and down the river, carrying mails, passengers, and freight, connecting with the cutter on route No. 1 at Aparri twice a month.

BAY AND RIVER LAUNCHES.

CUYO.

(Bernabe Viñas, patron.)

The *Cuyo* was formerly the *Basilan* and was turned over by the district commander of Isabela de Basilan on October 1, 1903. This launch was in fairly good condition when received by this bureau. It is used for harbor and river work.

GEORGE TILLEY.

(A. Maringsa, patron.)

This is the only large launch used by the division that can go under the Bridge of Spain, and is largely used for river and harbor work, carrying mail, passengers, and freight from the landing of the captain of the port to the cutters in the harbor.

SUERTE.

(P. Febre, patron.)

This launch has been assigned to the constabulary and is largely used in transporting troops and supplies on the Pasig River, Laguna de Bay, and in Manila Bay.

PASIG.

(Segundo Aslatico, patron.)

The *Pasig* was formerly the *Julia* and was received from the United States Quartermaster Department. She is assigned to duty at the coast-guard machine shops at Engineer Island. She is engaged in carrying the inspector of machinery, workmen, material, etc., from the island to the ships.

PEPE.

(L. Ayala, patron.)

TENDER.

(E. Alberto, patron.)

These are two small launches used in going from the office of bureau of coast guard and transportation to Engineer Island, and back and forth between the cutters and shore.

SEAGOING LAUNCHES.

RANGER.

(Capt. Charles W. B. Maddox.)

At the beginning of the fiscal year she was assigned to the constabulary at Cebu. On the 25th of September, 1903, while running between Dumaguete and Tagbilaran, she noticed the American schooner *Esperanza* flying signals of distress. She stopped and found that the schooner was short of drinking water, which was given to her. On the 28th she was ordered to proceed to Zamboanga to report to Colonel Harbord, Philippines Constabulary, for duty.

On October 1, 1903, she was detailed to pursue the launch *Victoria* with the two renegade Philippines Constabulary officers Hermann and Johnson on board. During this detail she touched the following ports: Sandakan, Zamboanga, Isabela, Cagayan, and Sipalay.

At the last-named port she joined the coast-guard cutter *Romblon* under the orders of Colonel Taylor, Philippines Constabulary. Here one of the Philippines Constabulary officers was found dead. From there she returned to Misamis, where the launch *Victoria* was found.

After being relieved from the above detail she returned to her station at Zamboanga.

On January 5, 1904, she was beached at Pollok and had her bottom repaired, and on the 1st of February returned to her old run.

On March 6, 1904, she towed the quartermaster launch *Detroit* up the Cottabato River, her steering gear being out of order.

She remained under the orders of the constabulary at Zamboanga until June 8, when she came to Manila and was given a general overhauling.

ROVER.

(Capt. Charles W. Lauritzen.)

On the 1st of July, 1903, she was at Manila being repaired, and on the 11th was ordered to proceed to Lucena and report to Colonel Bandholtz, Philippine Constabulary, with headquarters at Lucena.

On January 15, 1904, she came to Manila and was given a general overhauling.

On the 30th she returned to her station at Lucena, where she remained until the end of the fiscal year.

SCOUT.

(Wrecked.)

She was one of the oldest launches operated by this division and was assigned to the constabulary with headquarters at Cebu.

On August 12, 1903, she was ordered to report to Colonel Taylor, Philippine Constabulary, at Iloilo.

She remained there until October 4, when she arrived at Manila to be repaired, and on the 12th was placed on the slip and had her bottom repaired, being ready to go to sea again on the 24th.

On the 27th of the same month she returned to her station at Iloilo. On May 20, 1904, she was ordered by Colonel Taylor, Philippine Constabulary, to report to the governor of Samar for a tour of inspection around the island, calling at such ports as the governor directed.

While lying at anchor off Pandan, Antique Province, Panay, and while under the command of Capt. C. R. Croucher, she was wrecked during a typhoon on June 23, 1904, and is a total loss. The boiler, engines, and a great deal of her fittings were saved later by a wrecking party, which was left on the ground. No lives were lost. The officers and crew were brought to Manila on the coast-guard cutter *Panay*.

PITTSBURG

(Out of commission.)

The *Pittsburg* was received by this bureau from the United States Quartermaster Department on March 1, 1903, and after being repaired and supplied with stores was invoiced to the governor of Misamis Province for duty. On account of the expense of maintaining a launch, the province of Misamis was unable to care for her, and consequently, by authority of the civil governor, she was returned to this bureau on July 21, 1903.

She was again fitted out and assigned to duty on route No. 12 with the constabulary, with headquarters at Lucena.

She was returned to Manila on May 1, 1904, for repairs, but on account of the bad condition

of her hull and engines, she was condemned by a board of survey, her crew discharged, and the officers transferred to other coast-guard vessels.

She is now lying behind the breakwater in the basin at Engineer Island.

TROY.

(Master Charles Yarneberg.)

The *Troy* was originally a quartermaster launch and was invoiced to the governor of Cebu. After about six months service she was released and turned over to this bureau, being received by the division of vessels on January 1, 1904.

She was docked on the slip at Cavite Navy-Yard on January 26, and after a general overhauling made ready to go to sea and assigned to duty with the constabulary at Zamboanga, leaving Manila on April 5, 1904.

On arriving at Zamboanga she was assigned to Colonel Harbord, Philippines Constabulary, and has been doing duty with the constabulary on the south coast of Mindanao ever since.

SENTINEL.

(Master J. G. Mussen.)

The *Sentinel* is a stern-wheel river boat, bought from Farnham, Boyd & Co., and detailed to duty on the Cagayan River, with headquarters at Aparri. She makes from three to five trips a month up and down the river, carrying mails, passengers, and freight, connecting with the cutter on route No. 1 at Aparri twice a month.

BAY AND RIVER LAUNCHES.

CUYO.

(Bernabe Viñas, patron.)

The *Cuyo* was formerly the *Basilan* and was turned over by the district commander of Isabela de Basilan on October 1, 1903. This launch was in fairly good condition when received by this bureau. It is used for harbor and river work.

GEORGE TILLEY.

(A. Maringsa, patron.)

This is the only large launch used by the division that can go under the Bridge of Spain, and is largely used for river and harbor work, carrying mail, passengers, and freight from the landing of the captain of the port to the cutters in the harbor.

SUERTE.

(P. Febre, patron.)

This launch has been assigned to the constabulary and is largely used in transporting troops and supplies on the Pasig River, Laguna de Bay, and in Manila Bay.

PASIG.

(Segundo Asiatico, patron.)

The *Pasig* was formerly the *Julia* and was received from the United States Quartermaster Department. She is assigned to duty at the coast-guard machine shops at Engineer Island. She is engaged in carrying the inspector of machinery, workmen, material, etc., from the island to the ships.

PEPE.

(L. Ayala, patron.)

TENDER.

(E. Alberto, patron.)

These are two small launches used in going from the office of bureau of coast guard and transportation to Engineer Island, and back and forth between the cutters and shore.

Respectfully submitted.

FRANK P. HELM,
Marine Superintendent.

BUREAU OF COAST GUARD AND TRANSPORTATION,
DIVISION OF VESSELS,
Manila, P. I., September 20, 1904.

Commander J. M. HELM, U. S. Navy,
Chief of Bureau of Coast Guard and Transportation, Manila, P. I.

SIR: I have the honor to submit herewith supplement to the annual report for the fiscal year 1904, covering the period from July 1 to August 31, inclusive.

COAST-GUARD FLEET.

The vessels of this division were employed and located on August 31 as shown below:

CUTTERS.

Duty.	Name.	Location.	Duty.	Name.	Location.
Route 1.....	Masbate.....	Manila.	Route 6.....	Marinduque..	Cebu.
Route 2.....	Polillo.....	Do.	Route 7.....	Leyte.....	Catbalogan.
Route 3.....	Mindoro.....	Halsey Harbor.	Route 8.....	Busuanga.....	Zamboanga.
Route 4.....	Balabac.....	Manila.	Route 9.....	Samar.....	Cebu.
Route 5.....	Panay.....	San José.	Route 10.....	Mindanao.....	Do.

Cutters on special duty.—Negros, on duty with the constabulary bureau under Captain Dade, U. S. Army, inspector-general of constabulary, in connection with the Pulajanes uprising on the island of Samar. Luzon, returned from a trip to Iloilo, where she took on board laborers for the Benguet road. Basilan, finishing her repairs at Manila and getting ready for duty on route No. 2. Palawan, returned from a trip to Iloilo, from where she

transported laborers for the Benguet road to Dagupan. *Tablas*, with a special agent of the bureau of customs on board, is assigned to duty in the Sulu Archipelago.

Seagoing launches.—*Ranger*, assigned to the constabulary bureau, under Colonel Harbord, Philippines Constabulary, at Zamboanga. *Rover*, assigned to the constabulary bureau, under Colonel Rivers, Philippines Constabulary, at Lucena. *Troy*, assigned to the constabulary bureau at Zamboanga, under Colonel Harbord, Philippines Constabulary. *Pittsburg*, at Manila out of commission.

Sentinel, stern-wheel, on duty on route No. 11, with headquarters at Aparri, operating on the Rio Grande de Cagayan.

Harbor launches.—*Cuyo*, *George Tilly*, *Tender*, *Pepe*, engaged in river and harbor work. *Pasig*, assigned to the inspector of machinery, Engineer Island. *Suerte*, assigned to the constabulary bureau, engaged in carrying troops and supplies on Manila Bay, Pasig River, and Laguna de Bay. *Leader*, assigned to the chief quarantine officer of the Philippine Islands for use in the quarantine service at Manila.

NEGROS.

(Capt. H. C. Reissar.)

On the 7th of July the *Negros* went on the slip at Canacao and had her shaft and propeller examined, her bottom recoppered, and a new shaft put in.

On the 12th instant she was taken off the slip, and after her trial trip on the 14th was found to be in first-class condition.

On July 20 she sailed from Manila to Pasacao with 70 Philippine constabulary soldiers and officers.

On the 22d, while returning to Manila she sighted the American schooner *Lilibonne* flying distress signals, and on boarding her found that her rudder was unshipped, so towed her to Romblon.

On July 24 she was assigned to duty in the third constabulary district, with headquarters at Iloilo, under Captain Dade, U. S. Army, adjutant-general Philippines constabulary, and is doing duty in connection with the Pulajanes uprising in Leyte and Samar.

During August she carried troops and supplies to and from Iloilo and other places of the district. She has given good service to the constabulary.

LUZON.

(Capt. John Foster.)

At the beginning of the fiscal year she was at Canacao Bay awaiting to go on the slip.

From the 9th to the 12th of July she was on the dock, and had her shaft and propeller examined and some copper renewed: a new shaft was put in.

On the 7th she sailed over route No. 3, and returned to Manila on the 30th of July.

On August 3 she again sailed over route No. 3, and returned to Manila on the 14th.

On the 16th she proceeded to Iloilo to transport laborers for the Benguet road, and on the 21st she landed 409 laborers, including women and children, at Dagupan, and returned to Manila on the 22d.

On the 25th she sailed to Ormoc, carrying 50 Philippine constabulary soldiers and officers, and returned to Manila on the 29th.

This cutter also carried, under Act 1090, nonofficial passengers and freight.

POLILLO.

(Capt. Philip Leblond.)

On July 1 she left Cebu for Manila with Roman Catholic Bishop Hendricks on board, by order of the civil governor, and arrived at Manila on July 3. She returned on the 5th instant to her regular station on route No. 9.

On the 19th of August she was relieved by the coast guard cutter *Samar*, and returned to Manila over route No. 2. She went to Canacao to be repaired and to have her shaft and propeller examined.

The end of August finds her at anchor in Canacao Bay waiting her turn to go on the slip.

MASBATE.

(Capt. T. F. Stewart.)

On July 1 this cutter sailed on route No. 1. On account of the typhoon weather, she was unable to land freight at Iba, Candon, Vigan, or Laoag, and same had to be returned to Manila. On August 15 she again sailed on this run, and stopped at Cape Engano and changed light-house keepers. She returned to Manila on the 25th, and was assigned to duty as guard cutter.

BUSUANGA.

(Capt. F. M. White.)

On July 1 this cutter was made ready to go to sea on route No. 10, relieving the coast guard cutter *Basilan*. During August she made two trips over this route, and on the 30th she relieved the coast guard cutter *Mindanao*, at Zamboanga, on route No. 8.

BALABAC.

(Capt. Peter J. P. Schoon.)

On July 1 this cutter was detailed as guard ship at Manila. On the 2d she made a special trip to Taal with the honorable secretary of the interior, Dean C. Worcester, Doctor Freer, Mr. McCasky, and Doctor Barrows, returning to Manila on the 5th. She resumed duty as guard ship until the 12th, when she proceeded to Canacao Bay to go on the slip. From the 14th to the 21st she remained on the ways and had her tail shaft and propeller examined. A new tail shaft was put in. On the 27th she returned to Manila and made ready to go on route No. 4, relieving the coast guard cutter *Palawan*.

On August 4 she sailed over route No. 4. On the 17th at daylight she left Baler in search of the sloop *San Louis*, which had put to sea with Lieutenant Metcalf, Philippines constabulary, several scouts, and a crew of four men. She found the *San Louis* about noon 30 miles off Casiguran in a helpless condition, gradually breaking up, and the occupants without food or water. Although a strong gale was blowing, everybody on board was saved, and the sloop towed to Baler. During the trip she carried Colonel Rivers, Philippines constabulary, and party on a tour of inspection along the east and south coasts of Luzon. She returned to Manila on August 25.

PALAWAN.

(Capt. Wm. de C. Wetherell.)

On July 1 the *Palawan* was at Cavite undergoing minor repairs. On the 6th she was made ready for sea, and sailed over route No. 4. On the 26th she called at Batan Island for coal from the government coal mines, but as the mines were closed, was unable to get any. She returned to Manila on the 29th.

On August 6 she sailed with a cargo of dynamite and other freight to Laguimanoc, Unisan, and Mulanay, returning to Manila on the 10th. On the 11th she sailed to Pasacao, where she got 50 Philippines constabulary soldiers and took them to Catbalogan, returning to Manila via Lucena. On the 19th she sailed for Iloilo to transport 123 laborers to Dagupan for the Benguet road. She landed them, together with 4 American foremen, on the 23d.

Until the end of the month she remained in Manila detailed as guard ship.

BASILAN.

(Capt. Thomas A. Hilgrove.)

This cutter was on route No. 10 until July 11, when she was detailed to special duty, leaving Manila with a party of engineers for Boac, Capiz, and Calivo, and returning to Manila on the 18th. On the 21st she sailed with passengers and freight for Capones Island and Dagupan. On the 27th she again made a trip to Dagupan with 50 tons of dynamite for the Benguet road.

On August 9 she proceeded to Canacao Bay to go on dry dock. From the 10th to the 15th she was on the slip; her tail shaft and propeller were taken out and repaired, her bottom was partly recoppered and decks calked. She returned to Manila on the 18th, and on the 27th received orders to go on route No. 2.

TABLAS.

(Capt. James Miller.)

On July 1 the *Tablas* took 2 officers and 20 soldiers aboard at Jolo and proceeded to Siasi to search for contraband, but found none. On the 11th she arrived at Bongao. On the 19th she seized in Sibutu Passage a sloop with a large amount of goods from Sandakan, this cargo being the most valuable yet seized. On the 24th a party of sailors from the *Tablas*, under the command of the first officer and the customs inspector, landed at Cagayan, Sulu. On the approach of the boat the party was fired on by a band of Moros. Three of the sailors were wounded and the ship's boat riddled with bullets. The *Tablas* immediately returned to Jolo and reported the attack to the civil governor, who ordered two companies of troops

and 5 officers to the scene of the attack. On the 26th the troops were landed, and firing commenced at once. The Moros were fortified in a "Cotta" which, after some fighting, was taken. It was found that 24 Moros were killed. On the 28th she returned to Jolo to coal and to clean ship.

While at Jolo, a captured sapit was fitted up for work in connection with the *Tablas*, and on August 8 she went on a cruise south of Tawi, towing the sapit. Owing to heavy weather during all of this month very few native boats ventured to leave Borneo, and in consequence there was very little smuggling done. On the 30th she returned to Zamboanga to consult with Governor Wood relative to licensing Moro boats and authority to enforce the law in that respect.

MARINDUQUE.

(Capt. John C. Henschien.)

During July and August this cutter was on duty on route No. 6.

On June 29 the chief of the bureau of coast guard and transportation was requested by the director of posts to allow a post-office inspector who was on duty on the island of Cebu to go on the *Marinduque* so as to establish post-offices in all organized municipalities. The chief of this bureau accordingly directed the captain of the *Marinduque* to afford the post-office inspector every facility.

On August 14 this bureau received a wire from the commanding officer at Cebu requesting the use of the *Marinduque* to search for the quartermaster launch *Chicago*, which had left Ormoc on the morning of the 12th. On receipt of this request the chief of the bureau ordered the *Marinduque* to look for the missing launch. On the 16th the *Marinduque* found the launch all well at Ormoc. The *Chicago* having put to sea was obliged to return to Ormoc for safety on account of the heavy weather.

MINDANAO.

(Capt. A. R. Cahling.)

During the months of July and August this cutter remained on route No. 8, with headquarters at Zamboanga. On August 15 she was relieved by the cutter *Busuanga* and returned to Manila over route No. 10.

SAMAR.

(Capt. Peter Olsen.)

During the month of July this cutter was on duty on route No. 2. On the 30th while on duty as guard ship at Manila she assisted the steamship *Afghanistan*, which, on account of the typhoon, was being blown against the wall of the breakwater.

On August 1 and 18 she made trips on route No. 2. On the 19th while at Surigao she relieved the cutter *Polillo* on route No. 6.

MINDORO.

(Capt. H. C. Anderson.)

At the beginning of July this cutter was at Culion, on duty on route No. 3, and returned to Manila on the 8th. On the 13th she was at Cañacao waiting to go on the slip to have her propeller and shaft examined. She remained at Cañacao for the rest of the month.

From the 8th to the 10th of August she was on the dry dock. Her propeller and shaft were examined, bottom partly recoppered, and decks calked. On the 20th she left Manila for a trip over route No. 3. On this trip she carried a large amount of freight for the custom-house which is being constructed at Balabac. During August the *Mindoro* received (under Act 1090) the following amounts of money for passengers and freight: Passengers, ₱262.50; freight, ₱40.17. On August 31 the *Mindoro* was at Halsey Harbor.

LEYTE.

(Capt. William N. Fisher.)

During July and August this cutter has been on duty on route No. 7, where she will remain for some time.

PANAY.

(Capt. William M. Murphy.)

On July 1 we find this cutter at Pandan, where the coast guard launch *Scout* was wrecked. She took aboard all the property that could be saved and the crew of the *Scout*, and then

sailed for Manila over route No. 5. She sailed from Manila again over route No. 5 on the 13th, and while running between Concepcion and Iloilo, off Balbayan Island, she sighted a vessel flying signals of distress. On examination the vessel was found to be the launch *Petro* (of which Lizarraga Hermanos, of this city, are the owners), en route to Iloilo, but weather-bound off the coast of Panay on account of the typhoon. The *Panay* supplied her with 23 sacks of coal.

On August 31 the *Panay* was at San Jose, en route to Manila.

RANGER.

(Capt. C. W. B. Maddox.)

At the beginning of July the *Ranger* was at Engineer Island undergoing repairs. From the 12th to the 23d she was on the slip at Cañacao Bay. On the 27th she sailed from Manila to report to Colonel Harbord, Philippines Constabulary, at Zamboanga, where she is to remain for some time.

On the recommendation of Colonel Harbord, the *Ranger* was fitted up with a Gatling gun, which she received and mounted on August 30.

ROVER.

(Capt. Charles W. Lauritzen.)

This launch has been assigned to the constabulary at Lucena, under orders of Colonel Rivers, Philippines Constabulary.

TROY.

(Capt. George Mansfield.)

Ever since her arrival at Zamboanga, this vessel has been assigned to Colonel Harbord, Philippines Constabulary.

SENTINEL.

(Capt. John G. Mussen.)

This stern-wheel river boat is stationed at Aparri on route No. 2, operating on the Rio Grande de Cagayan inland from Aparri.

Very respectfully,

FRANK P. HELM, *Marine Superintendent.*

REPORT OF THE COAST-GUARD CUTTER TABLAS.

JOLO, P. I., July 18, 1904.

Commander J. M. HELM, U. S. Navy,
Chief of Bureau, Coast Guard and Transportation, Manila.

SIR: I have the honor to submit the following report of the work done by the coast-guard cutter *Tablas* while on special duty with the customs service.

Left Manila on January 10 with instructions to proceed to the Jolo Archipelago and endeavor to break up the smuggling going on there. En route, called at Puerto Princesa, Cape Melville, and Sandakan, BNB., Special Agent McDonald being on board to represent the customs service.

On 12th arrived at Puerto Princesa, landed mail and proceeded to Cape Melville with supplies for the light-house; 14th left for Sandakan, BNB., arriving next day. Interviewed acting governor and commissioner of customs and other officials, who assured us their cordial assistance in our work. It is learned that very little smuggling is done from here at this season, as the winds are contrary to the small boats making these trips, but with the beginning of the southwest monsoon there will be a lot of it done as is usual with favorable wind.

Left Sandakan on 16th and proceeded to Jolo for the purpose of locating the customs cutter *Sanderling* with Coast District Inspector Shaw, who understands the situation in regard to smuggling going on. Arrived at Jolo on the 17th and left at once for Siassi, where Inspector Shaw was taken on board; then proceeded to Bongao, where a detail of 20 soldiers was taken aboard for the purpose of searching several islands of the Tawi-Tawi group for dutiable goods. On the 20th proceeded to the island of Balimbing and sent party to search the island of Baun; proceeded to Simonor Island same day and searched the place but nothing of a dutiable nature was found anywhere; proceeded to Tandubas and searched the whole island; found the natives here very hostile. Nothing found here, but got information of a lot of tobacco at South Ubian; 21st arrived at Ubian and sent party to search the island. It is evident that a large shipment of tobacco had been on the island but has since been transhipped in vintas, as nothing was found; 22d returned to Bongao and landed soldiers there; then proceeded to Siassi and Jolo. Arrived in Jolo on the 23d and upon request of the governor took about 100 soldiers as part of a military expedition to the island of Pata, also to search for dutiable goods; 24th patroled the island of Pata in cooperation with U. S. S. *Annapolis* and seized several vintas who were trying to escape with people wanted by the military authorities. Same night took on party of soldiers and returned to Jolo; 26th proceeded to Sandakan and conferred with Secret Agent Lambeth and then proceeded to the island of Cagayan de Jolo to clear up some customs matters; 28th left for Jolo and Zamboanga, arriving on the 30th—the latter in accordance with instructions received. Coaled ship at Zamboanga. Distance steamed during period, 2,618 miles; coal consumed, 119 tons.

February.—Remained at Zamboanga on the 1st to consult with Moro council in reference to licensing of Moro boats. Left 9 p. m. for Jolo, where Collector of Customs Hill was taken on board for Bongao. On the way stopped at Siassi and arrived at Bongao on the 3d; proceeded to Sandakan and returned to Bongao on the 6th. Special agent proceeded to Sitanki, where duty was assessed on goods amounting to \$391 United States currency, and the people instructed that all goods must pass through the customs-house at Bongao. Captain Hunt, commanding officer of Bongao, was taken to Lahut Dato (Darvel Bay) on the 9th to investigate about some children that were kidnapped from Mindanao; interviewed the resident governor and other government officials, who informed us that most of the goods illegally entered into the Philippines did not come from Sandakan, but were sent to Lahut Dato, Salim, Simporna, and Tawao, small towns on the east coast of Borneo, and were from there run into the Sulu Archipelago by small boats. On the 12th, upon receiving telegram from Secret Service Agent Lambeth at Sandakan, we proceeded there, he being ordered to Manila; after waiting two days for him left for Bongao and Jolo; 16th to 20th spent at Jolo on account of severe storm then prevailing; 20th to 25th on cruise, stopping at Siassi and Sandakan; 26th proceeded to cruise among the Tawi-Tawi Islands. Stopped at South Ubian and found store stocked with goods bought at Siassi, the first time that goods sold here that duty had been paid on. People here not very friendly, but more so than on previous visits; 27th went to Tandubas, but owing to the hostility of natives did not land; also learned that the natives of this island sent for large shipment of goods from Jolo, which shows that some impression is being made and that they are afraid to smuggle. Patroled the island between Tandubas and Sibutu, returning to Jolo on 28th, thence to Zamboanga, where the situation was discussed with General Wood, who will give us all possible aid. Distance steamed during the month, 1,810 miles; coal consumed, 96 tons.

March.—First to 7th remained at Zamboanga awaiting orders, then ordered to resume present duties and left at once for Jolo; 9th left for Bongao, then cruised off the coast of Borneo. Several Moro sapits were stopped and examined. Touched at Sandakan and

took on board Secret Agent Lambeth and returned to Jolo on 12th for the purpose of getting two new officers on arrival of *Palawan*; 16th left Jolo for several of the most southern islands for the purpose of bringing the chiefs and dattos of those places to Jolo that the governor might impress upon them the necessity of their keeping and obeying the law and not attack Americans who visited their islands; 18th left Jolo with part of a military expedition on board for the island of Pata and vicinity, after which a circuit of Jolo Island was made, returning to Jolo on night of 19th. On the 21st left Jolo with Captain Rivers and party to visit some islands which are in dispute as to ownership, off the coast of Borneo, named as follows: Siamil, Danawan, Kapalai, Mabul, Sipatan, Taganak, Baguan, Langaan, Lankayan, and the Mangsi islands, thence to Balubu. Although this service did not interfere with regular work, yet it made a long trip. Ten Moro dattos were also returned to their several islands while on this trip. Returned to Jolo on 29th, thence to Zamboanga. During the month some good results are beginning to show as a result of our work, as there is a greater increase of native trade at Jolo and Siassi, and many of the Moro boats are getting licensed. When the licensing of these is completed it will be easy to trace up those that are smuggling. Distance steamed during the month, 1,731 miles; coal consumed, 87 tons.

April.—First to 3d at Zamboanga; 4th and 5th cleaning boilers at Jolo; then proceeded to Cagayan de Jolo; here found evidence of a large amount of smuggling. Informed the people that free trade would no longer be permitted, and that they must license their boats. This they have refused to do, so will get authority and take action later; 9th proceeded to Bongao, where 1 officer and 10 soldiers were taken on, and proceeded to Sitanki, Sibutu Island, where the place was searched and a Chinese storekeeper arrested for evasion of duties; took him to Bongao, where he was later allowed to pay the duties, amounting to \$273.10 United States currency; 12th left for Siassi, Jolo, and Zamboanga; 15th left for cruise, touching at most of the islands south of Tawi-Tawi; thence to Bongao, Sandakan, Cagayan de Jolo; thence cruised to Lahut Dato, and here were informed that the contraband trade has greatly fallen off. The people in Sandakan tell us that their trade is being considerably affected by *Tablas* being in these waters, but on the other hand their legitimate trade with Jolo has greatly increased. Cruised in vicinity of Simporna and the Alice Channel, returning to Bongao on 26th; thence to South Ubian, Tobawan, Jolo, and Zamboanga. Many boats are stopped and examined. Distance steamed during the month, 1,860 miles; coal consumed, 68 tons.

May.—Coaled at Jolo and proceeded toward Sandakan to intercept steamship *Kudat*, as it was reported she was bringing in Chinese, etc. Stopped her at sea on the 4th and put customs official on board, who went to Jolo on her; however, nothing was found, as she seemed to have been warned by cable from Singapore and we know goods were transferred at Sandakan. On the 7th proceeded on cruise to Bongao and Cagayan de Jolo with intention of licensing all Moro boats there. Eleven of these were measured and licensed, and four were seized off the coast of the island on their way in from Sandakan, all with contraband cargoes. These were towed to Jolo, where they will be disposed of. We now have information of a lot of smuggling going on, but there is so much ground to cover with one boat that it can not be properly done. The natives of Cagayan de Jolo have resented our work here and express their intention to continue smuggling. About 150 assembled on the beach with arms to retake some sapits with cargo we had seized, and it became necessary to fire upon them to get these sapits. Returned to Jolo on 17th, then proceeded to Zamboanga for coal; 20th returned to Cagayan, where seven more sapits were seized, all coming in from Sandakan with contraband goods. These seven were towed to Jolo with their crew and turned over to the collector of customs; 24th received instructions to go to Zamboanga, where orders were received to proceed to the south coast of Mindanao to investigate reports of smuggling at Sarangani Bay and Island. Accordingly made thorough investigations, but am convinced that very little is done there, as the people are very poor and have no boats of any size. However, it is certain that Moros are sold as slaves and shipped in vintas to Tawi-Tawi and Basilan and other places, but such cases I think are few. Distance steamed during the month, 2,106 miles; coal consumed, 86 tons.

June.—On the 1st proceeded to Mati, thence to Davao, arriving on 3d, and made thorough investigation of trade conditions on coast to southward of Davao, but found no evidence of smuggling in this vicinity. On 4th went to Sarangani Bay and visited the several towns there, consisting of Glan, Macar, and two small towns on the east side of the bay. There is only one Chinaman in this locality and doing but little trade, and it seems certain that little or no smuggling is done. On 6th cruised along the south coast of Mindanao and anchored at Port Lebak; 7th, proceeded to Cottabato, where we remained until evening of the 10th to give ship the benefit of lying in fresh water. Here orders were received to resume work in Sulu Archipelago. Left for Zamboanga, thence to Jolo, leaving Jolo on the 12th for cruise to north coast of Tawi-Tawi, stopping all boats for examination. Landed at Tinakla Island and found three boats from Sandakan that had entered and paid duty at Bongao, the first time it has ever been done. Called at Bongao and left on the 14th for Jolo, where quarterly

supplies were taken in on the 15th. Left same night for north coast of Tawi-Tawi, thence along the Borneo coast to Sandakan, arriving there on the 18th, and learned that smuggling had greatly diminished at this place; 20th, left Sandakan for Sibutu and the Alice channel, where all boats were examined and three sapits seized with rice from Borneo; 22d, proceeded to Bongao with said sapits and turned them over to collector of customs. Left for Jolo, arriving there on 24th; coaled on 25th, and left on 26th for vicinity of Sibutu; 27th, anchored near Bilimbing to try and catch several vintas supposed to be coming from Sandakan, but find it is now a difficult matter to get small vintas, as the ship is too conspicuous and they hide on seeing the ship; 28th, proceeded toward Jolo, examined several boats and seized three vintas with contrabands from Kudat, BNB., for South Ubian. These vintas were released, but their contents and the chief person among them taken to Jolo and turned over to the proper authorities. Large sapit in Tataan Pass upon seeing us ran their boat onto the reef and all of the crew escaped to shore. As some cartridges were found it is supposed they had arms, as there was no other reason for their running away. Sent landing party to find them, but without success; 29th, arrived at Jolo. Distance steamed during June, 1,942 miles; coal consumed, 80 tons. Total distance cruised to June 30, 12,067 miles. Total amount of coal consumed to June 30, 536 tons.

Respectfully,

JAMES MILLER,
Commanding U. S. C. G. Tablas.

BUREAU OF COAST GUARD AND TRANSPORTATION,
COAST-GUARD CUTTER TABLAS,
Jolo, P. I., October 2, 1904.

Commander J. M. HELM, U. S. Navy,

Chief of Bureau of Coast Guard and Transportation, Manila, P. I.

SIR: I have the honor to submit the following report of operations of coast-guard cutter *Tablas* from June 30 to September 30, 1904, while on special duty with the customs service:

Left Jolo on morning of July 1, with 2 officers and 20 soldiers on board, for the purpose of searching the town of Maibun, information having been received that a quantity of Chinese tobacco had been brought in. The town was thoroughly searched, but no trace of the tobacco could be found. Returned to Jolo the same day.

Third, proceeded to Siasi at request of Governor Scott, to assist constabulary to capture a cotta on Lapak Island and break up a gang of troublesome Moros. Cotta was shelled on the 4th, and although the Moros escaped the matter was cleared up in a satisfactory manner, as all the chiefs surrendered to the constabulary officer. Returned to Jolo the night of the 4th.

Fifth, left for a cruise, touching at Bongao and Sitanki.

Sixth, seized a Moro vinta in Tataan Pass and turned her over to collector of Bongao. The crew escaped ashore. At Sitanki a thorough search was made for contraband, but nothing was found; then cruised on the coast of Borneo as far as Tawao. Here we find that considerable trade is done with the Moros, there being three sapits in port at this time. Touched at Simporna on the 10th, then proceeded to Jolo via Bongao and south side of Tawi-Tawi. Sent party to search town of Lataan, but nothing found. All the people here armed themselves and hid in the brush. Soldiers from Bongao were fired on at this place last month.

Thirteenth, stopped at South Ubian. Here a sapit was found that had just unloaded contraband cargo. The sapit was seized, but the goods had been hidden in the brush and could not be found. Towed sapit to Jolo, arriving on the 14th. This sapit has since been fitted up to work in conjunction with the ship.

Eighteenth, coaled ship at Jolo and sailed for vicinity of Bongao, and on the 19th seized a Moro sapit with a load of dutiable goods. This boat was headed for Siminoor Island, while two others were entering Bongao with small quantities of rice. All the boats belonged to the same parties, and the goods had been transferred at sea. In this manner the Moros avoid the payment of the greater part of customs duties, and make themselves appear honest by calling at Bongao with small cargoes. Returned to Bongao with sapit and transferred her cargo to *Tablas*; then proceeded to Sandakan, arriving on the 21st, leaving again on the 22d for Cagayan Sulu. While Inspector Shaw and party from the ship were making search for smuggled goods landed here on the 20th he was attacked by a Moro with a bolo, but was not injured. The Moro was made prisoner and goods taken on *Tablas*; 24th, while armed party from ship was making more seizures they were fired upon by a large party of Moros armed with rifles. Three sailors were slightly wounded and ship's boat was riddled with bullets. All the men of this place were engaged in this attack and fired some two hundred rounds at our party, whose retreat was covered by ship's guns. The life of the customs agent at Unus was attempted two days previous to this event.

Arrived at Jolo 25th and left same date with two companies of troops for Cagayan Sulu, at request of Governor Scott. When these troops landed they were fired upon by the Moros,

and an engagement took place in which some 26 Moros were killed and the town of Tanduan was burned; 29th, returned to Jolo with the troops. A stay was made here for purpose of cleaning the ship's boilers.

August.—On the 1st coaled ship at Jolo and remained here until the night of the 3d, while inspector cleared up his office work at Siasi; 4th, proceeded to Zamboanga for the purpose of consulting Governor Wood regarding the licensing of Moro boats, etc., and returned to Jolo on the 6th.

Seventh, proceeded south, towing a sapit to be used on the reefs where the cutter can not go; 10th, this sapit was sent to examine all the south coast of Tawi-Tawi and make such searches as found necessary and meet the ship again at Balimbing. In the meantime ship cruised in Sibutu Passage and stopped for examination all Moro boats seen; 15th, landed in Balimbing to investigate a smuggling case, then proceeded to Siasi and Jolo; 17th, left for Cagayan Sulu for the purpose of bringing the customs official and some troops back to Jolo; 18th, seized one sapit with contraband cargo from Sandakan. The goods and their owner transferred to *Tablas*, but the sapit had to be abandoned at sea, as she sprang a leak and filled. Arrived at Jolo on the 19th; 20th, proceeded on cruise to the Sibutu and Alice channels; 22d, sent the sapit away to watch for boats on the reef to west of Sibutu, while the cutter cruised in Alice channel; 23d, seized one sapit with small amount of goods and full load of rattan from Tawao; owing to the rough weather she had to be released, with orders to enter at Bongao; 25th, proceeded to the islands south of Tawi-Tawi and searched Moro boats and Chinese stores at the different islands; 27th, arrived at Jolo and remained there till the 30th, while Inspector Shaw clears up his office work at Siasi. It will be observed that six days of this month have been lost that the customs official stationed on *Tablas* might do office work on shore.

Owing to the unusually severe weather prevailing during this month there appears to have been but few Moro boats visiting the coast of Borneo; 30th, proceeded to Zamboanga to again consult Governor Wood regarding the work.

September 1: Left Zamboanga for southern islands via south side of Jolo. Examined all Moro boats seen and touched at Siasi on the 3d. Here Inspector Shaw received word that he was to be relieved; therefore he had to return to Jolo, that he might make arrangements for closing his office; 4th, left Jolo for Alice Channel, and remaining in vicinity of Meridian Reef stopped all boats for examination; 7th, called at Lahat Datu; 10th, returned to Jolo; 12th to 16th, cruising in Sibutu Passage and vicinity; 16th, proceeded to Zamboanga; 18th, left with members of court of first instance on board for Jolo, Siasi, and Bonigao; 21st, at Bonigao, where several smuggling cases were disposed of by the court. Then proceeded to Cagayan Sulu with Collector Corwine and treasurer of Moro Province for the purpose of investigating customs affairs of that island and locating site for custom-house. Returned to Jolo on the 24th. From the 24th to the 27th patrolled waters in the vicinity of Bonigao, thence to Siasi and took Inspector Shaw's office furniture to Jolo. Remained in Jolo till end of month.

In connection with the special duty on which the *Tablas* has been engaged it is thought that some comment on the work and local conditions would not be inexpedient. And to this end the following observations are respectfully submitted:

In dealing with the situation in the district of Jolo it is necessary that a cutter be constantly in the district. It is imperative that it be stationed in the vicinity of Bonigao, that the coast of Tawi Tawi and the approaches to the different channels and passages may be constantly watched; that this cutter should call Bonigao her headquarters and not be required to go to Siasi or Jolo oftener than once each month, or only in case of emergency or to take boats or goods there that have been seized; that the sapit already in use and one good vinta be constantly used by said cutter as tenders to watch certain channels while the cutter patrols the coast of Tawi Tawi and the Sibutu and Alice channels.

From information gained it is quite certain that about two-thirds of the goods smuggled in are passed through the Bonigao Channel and this vicinity, and most of the Chinese tobacco comes through there in vintas, and even those boats that enter Bonigao are known to land their dutiable goods in this channel until after leaving Bonigao, when it is reshipped and taken to its destination. This is done to throw off suspicion and make certain chiefs appear honest. Single boats have been known to land nine cases of Chinese tobacco and enter Bonigao and pay duty on one case only. As a rule each package of the cases entered at the custom-house is there stamped. These packages are kept by the Moros and produced when an inspector visits their stores or houses. These boats must be caught on the sea, for it is a waste of time to search stores or towns. As soon as Americans are seen approaching all dutiable goods are so securely hidden that it is impossible to find them. In most every instance where we have received reliable information of goods being in stores or towns it has been removed before we could land. Then, again, to do this it requires that the searching party be armed and of sufficient strength to resist attack, and this keeps the natives stirred up and resentful, whereas seizures at sea involve no such disadvantages.

All the boats coming from Sandakan follow the coast of Borneo as far as Tambisun Island,

then make the short run across to the Bonġao Channel or Tataan Pass during the night, and are hidden or have passed all danger of being caught before daylight. The ship might lay off these places at night, but every chance is against her being able to catch these small boats in the darkness, especially as the cutter is so conspicuous, and they are able to avoid her, but, as before stated, with tenders stationed in these narrow channels there is every probability of catching the smugglers.

In this and previous reports it will be noticed that the *Tablas* has never stopped longer than two or three days at a time at the places above mentioned, and therefore her movements are well known to the Moros. The customs officials heretofore stationed on the vessel have deemed it necessary to go to Siasi and Jolo three times or more each month. This, perhaps, was necessary in Mr. Shaw's case, as he had and was responsible for his office at Siasi. Nevertheless, several days were lost on each of these occasions, and at such times the bulk of the smuggling has been done. I would respectfully suggest that if a cutter is to be stationed permanently in these waters the master should control every movement of said cutter and her tenders. And if a customs official is to be detailed for duty on the cutter he should only attend to the disposal of such boats or goods that are seized, or other such duties that are purely in his line, and on no account should he require or request that the vessel make long cruises when no possible good can be derived from so doing. I would also suggest that the ports in Borneo be visited as little as possible.

At this time a great amount of smuggling is being done and I am certain that this can be broken up in a great measure by maintaining a strict watch on the places above mentioned and keeping a cutter constantly in the waters adjacent to Bonġao and Silutu.

As regards the change in the monsoons, it makes very little difference, especially to such boats as go to Sandakan, as these find fair winds in either monsoon from Tawi Tawi to Sandakan and return. Also in this part of the archipelago the northeast monsoon is oftentimes variable.

Very respectfully

JAMES MILLER, *Commanding.*

REPORT OF DISBURSING OFFICER, BUREAU OF COAST GUARD AND TRANSPORTATION.

MANILA, P. I., June 30, 1904.

Commander J. M. HELM, U. S. Navy,

Chief of Coast Guard and Transportation, Manila, P. I.

SIR: I have the honor to submit the following report of appropriations, expenditures, and balances of appropriations for the bureau of coast guard and transportation for the fiscal year 1904:

APPROPRIATIONS.

Salaries and wages.....	P76,481.96
Contingent expenses.....	7,000.00
Light-house service.....	654,818.00
Construction of vessels ^a	2,154,824.00
Total appropriated.....	2,893,123.96

EXPENDITURES.

Salaries and wages.....	P74,955.91
Contingent expenses.....	6,488.00
Light-house service.....	444,026.95
Construction of vessels.....	1,808,244.75
Total expended.....	2,333,715.61

^a This being a permanent appropriation for the construction, armament, and equipment of coast-guard cutters, the amount shown here as having been appropriated includes all appropriations made for this purpose during the fiscal years 1903 and 1904.

The appropriation of ₱654,818 for the light-house service includes the following:

Current expenses:

Salaries and subsistence of officers and crews of light-house tenders.....	₱45,354.00
Salaries of light-keepers and assistants.....	63,400.00
Maintenance and operation of light-house tenders <i>Corregidor</i> and <i>Picket</i> ..	81,600.00
Maintenance and operation of repair shop and storehouse in connection with the division of light-house construction.....	6,000.00
Construction of wharf on Engineer Island.....	6,000.00
Improvement of existing lights by installation of more powerful lenses...	14,000.00
Purchase of equipment for machine shop, light-house.....	2,000.00
Buoyage.....	27,000.00
Repairs to existing light stations.....	30,000.00
Incidental expenses.....	11,564.00

Total.....	286,818.00
------------	------------

Permanent improvements:

Construction of Maniguin Island light-house.....	60,000.00
Construction of Capitancillo Island light-house.....	70,000.00
Construction of Bajo Apo Island light-house.....	42,000.00
Construction of Bagacay Point light-house.....	60,000.00
Construction of new minor light-houses.....	136,000.00

Total.....	368,000.00
------------	------------

The expenditures for the above purposes during the fiscal year were as follows:

Current expenses:

Salaries and subsistence of officers and crews of light-house tenders....	₱42,474.29
Salaries of light-keepers and assistants.....	47,642.68
Maintenance and operation of light-house tenders.....	68,726.20
Maintenance and operation of repair shop.....	5,560.87
Construction of wharf on Engineer Island.....	5,667.81
Improvement of existing lights.....	417.16
Purchase of equipment for machine shop.....	171.61
Buoyage.....	14,743.74
Repairs to existing light stations.....	30,641.77
Incidental expenses.....	29,836.29

Total.....	245,882.42
------------	------------

Permanent improvements:

Construction of Maniguin Island light-house.....	552.94
Construction of Capitancillo Island light-house.....	53,340.68
Construction of Bajo Apo Island light-house.....	2,532.46
Construction of Bagacay Point light-house.....	28,143.07
Construction of new minor light stations.....	113,575.38

Total.....	198,144.53
------------	------------

The following shows the balance from the appropriations after the outstanding liabilities have been deducted:

SALARIES AND WAGES.^a

Appropriated.....	₱76,481.96
Expended.....	74,955.91
	₱1,526.05

CONTINGENT EXPENSES.

Balance of fund from prior years	₱1,000.87
Appropriated.....	7,000.00
Expended.....	6,488.00
	₱1,512.87
Liabilities.....	706.57
	806.30

^a All liabilities against this appropriation were settled June 30, 1904.

LIGHT-HOUSE SERVICE.

Current expenses:

Respectfully submitted.

H. B. HATFIELD, *Pay Officer.*

ANNUAL REPORT BUREAU OF ENGINEERING, FISCAL YEAR 1904.

The SECRETARY OF COMMERCE AND POLICE,
Manila, P. I.

SIR: I have the honor to submit herewith the annual report of the operations of the bureau of engineering for the fiscal year ending June 30, 1904:

ROAD CONSTRUCTION.

Requests from the provinces for insular assistance in improving existing highways and in constructing new ones have been numerous. These requests have been accompanied by recommendations from various officials pointing out the importance of improved highways (1) to the provincial officials in making their official trips, (2) in the operations of the constabulary, (3) in the extension of mail routes, (4) and, more particularly, in the development of fertile agricultural regions by reducing the cost of transportation of products, the price of which at the market centers has been high during the period of impassable roads, when the cost of transporting same to the markets has been practically prohibitive. The principal work of the bureau during the year has been that of highway construction.

Attention is invited to the additional value of road construction as a means of improvement in the organization of native labor and in its increased effectiveness. While difficulties have been encountered frequently in maintaining a uniform supply of labor, they are decreasing. The practice of giving only a few days' service and the unwillingness to labor in adjacent barrios may be considered as things of the past. It appears that considerable confidence in fair treatment has been gained; that a knowledge of the use of tools is being acquired, and that an application of such knowledge to the development of agricultural work is appreciated and utilized, and that the relation of manual labor to the development of the individual is gradually attaining its proper position. While the native still seeks the clerical position at the lesser money value rather than the position of a skilled laborer, he is by degrees acquiring a conception of the dignity of labor. The principal difficulty in securing satisfactory efficiency in the native laborers is the scarcity of competent foremen acquainted with local conditions and native characteristics.

The money expended on road work has perhaps a more far-reaching influence on the inhabitants than that expended through any other channel. It is more uniformly distributed among the people, it disseminates a broader knowledge of modern methods of work, it brings the American and the native into closer relationship and into a better understanding of each other. It is anticipated that this knowledge of tools and methods will be applied in the agricultural regions and will lead to an increased demand for American machinery and tools.

The aggregate amount appropriated from insular funds for road construction was ₱1,335,600, of which ₱494,227.31 were expended during the fiscal year. This money has been distributed through 11 provinces. The total number of natives receiving employment on road work is estimated at 80,000.

A brief description of the roads under prosecution and for the construction of which the Commission has appropriated insular funds follows:

Vigan-Bangued road, provinces of Abra and Ilocos Sur.—A general description of this project is given on page 214, of part 3, Report of the Commission for 1903. Act 920, providing ₱80,000 from the Congressional relief fund for the construction of this road, was passed October 3, 1903. The appropriation was practically expended during the fiscal year and work abandoned in the month of June on account of lack of necessary funds for the completion of bridges. An additional appropriation of ₱14,700 was provided for by Act 1192, dated July 15, 1904, and the necessary bridges between San Quentin and Bangued are now in process of construction.

The road is practically completed to San Quentin. The major portion of the work consists of heavy rock and side-hill work in the vicinity of the Gap, about 6 miles below San Quentin. The old military road leading from the Gap to Vigan was repaired for a distance of about 3.5 miles to the barrio San Julian. This portion of repair work the province had previously pledged itself to undertake. Work remaining to be done consists of the repair and construction of 22 bridges and culverts between San Quentin and Bangued. It is estimated that this work will be completed during the month of November.

The Abra River now forms the only outlet for Abra. It can be used only by rafts, and during much of the rainy season its navigation is difficult and dangerous and frequently impossible.

The completion of this road will afford increased interprovincial communication between Abra and Ilocos Sur; it will provide an outlet to the coast for Abra Province at all seasons of the year, and will materially cheapen the transportation to the markets of agricultural products and timber, in which Abra Province is rich. Its use will materially decrease the cost of transporting supplies into Abra Province.

Mr. E. S. Wheeler has been in charge of this road as superintendent since construction commenced. The maximum number of laborers employed was about 700.

Money statement.

Amount appropriated, Act 920, October 3, 1903.....	₱80,000.00
Amount expended to June 30, 1904.....	79,877.22

Balance available July 1, 1904.....	122.78
-------------------------------------	--------

Capas-O'Donnell-Iba road, provinces of Tarlac and Zambales.—Mention was made of the field work in progress on the Iba-O'Donnell survey on page 214 of the Annual Report of the Commission for 1903, part 3. During the southwest monsoons the exposed coast of Zambales is rendered difficult and dangerous for transportation by water. The construction of this road provides an outlet for the southerly portion of Zambales Province overland from Iba to Capas (on the

Manila and Dagupan Railway), a distance of about 50 miles. Adjacent to the termini of this road the population is fairly dense; the intermediate portion is sparsely settled.

Location over the Cordillera de Cabusilan is somewhat difficult, and will represent the most expensive portion of the road. The maximum elevation is about 1,500 feet. A substantial road is under construction, and at the end of the fiscal year was opened up for a distance of about 20 miles. The road is provided with a rock crusher and a 10-ton steam roller, and the finished road will be durable and well surfaced. The road opens up several square miles of fertile territory on the easterly side of the mountains, and considerable valuable timber will be available in the mountain regions.

Construction was provided for by Act 1016, under date of November 30, 1903, appropriating for this purpose the sum of ₱360,000 from the Congressional relief fund. Construction was commenced January 1, 1904. It is anticipated that no additional appropriations will be needed for the completion of this road in a substantial and durable manner.

Mr. E. A. Keys, assistant engineer, who made the survey of this road, was the superintendent from the beginning of construction to the 10th of August, on which date he resigned, and was succeeded by Mr. H. Thurber, then supervisor of Bulacan. Maximum number of laborers on this road was about 550.

Money statement.

Amount appropriated, Act 1016, November 30, 1903.....	₱ 360,000.00
Amount expended to June 30, 1904.....	76,928.73
Balance available July 1, 1904.....	283,071.27

Pagbilao-Atimonan road, Tayabas Province.—This road forms the principal link in the highway connecting the Pacific Ocean (Lamon Bay) with the China Sea, by way of Lucena, the provincial capital. It will materially reduce the expense of transportation of products from the Pacific coast to the markets. This coast is difficult and dangerous during the prevalence of the northwest monsoons and the present route of transportation is by water around the southeastern portion of the island of Luzon through the San Bernardino Straits.

The length of road is about 21 miles; from Pagbilao to Lucena is about 7 miles. Upon completion the at present almost inaccessible portions of the province will be within comparatively easy reach of the capital. The most difficult portion of this road is over the mountainous section, a distance of about 4 miles, in which portion heavy grades are encountered and the construction is expensive on account of heavy sidehill and rock work. The maximum elevation of the road is about 750 feet.

Surveys were authorized October 2, 1902, and were made by Mr. J. G. Vogelgesang, assistant engineer, who commenced field work August 11, 1903, and submitted final reports under date of November 10, 1903. The cost of surveys was ₱2,837.44.

Act 1015, dated November 30, 1903, provides ₱174,000 from the Congressional relief fund for the construction of this road. Construction was commenced January 1, 1904, Mr. Vogelgesang having been appointed superintendent. This position was held by him until August 4, when he was fatally injured while in the discharge

of his duties. He was succeeded by Mr. J. R. Miner, chief clerk, who had assisted in the surveys and who had been on the construction from its beginning. At the end of the fiscal year the construction was about one-half completed. The maximum number of laborers employed was about 1,200.

Money statement.

Amount appropriated, Act 1015, November 30, 1903.....	₱174,000.00
Amount expended to June 30, 1904.....	99,224.20
Balance available July 1, 1904.....	74,775.80

Pasacao-Nueva Caceres road, Ambos Camarines Province.—This road extends from Nueva Caceres, the provincial capital, to Pasacao, its seaport, and consists principally of repair work. The total length of road is 18 miles; it includes 46 bridges, aggregating 1,404 linear feet. One of the main objects of this road construction was to relieve distress existing in the province. Available provincial funds did not permit incurring this expenditure. Its construction was provided for by Act 918, under date of October 2, 1903, appropriating ₱50,000 for the work. The construction was commenced under the direction of the provincial supervisor, Mr. E. P. Shuman, February 1, 1904. At the end of the fiscal year about 70 per cent of the construction was completed. The maximum number of laborers employed on this work was about 800.

This construction work has materially assisted in relieving the distress which existed in the province, and considerable hemp land has been opened up in the vicinity of the road since it began. Its completion will be of material value in connecting the provincial capital with its seaport.

It is anticipated that the construction can not be completed within the appropriated amount, but the provincial funds will permit the completion without further request for assistance from the insular government.

Money statement.

Amount appropriated, Act 918, October 2, 1903.....	₱50,000.00
Amount expended to June 30, 1904.....	49,333.12
Balance available July 1, 1904.....	666.88

Lucena-Sariaya road, Tayabas Province.—The main object in the construction of this road was to increase interprovincial communication and to decrease the cost of transportation from the westerly part of the province to the capital and to the market.

Its length is about 6 miles and it follows the right of way of an old trail. The region is practically level, except the approaches to the ford near Lucena, and the road passes through a fertile agricultural area.

An examination of this road was made in December, 1903, by J. G. Vogelgesang, assistant engineer, under authorization dated September 21, 1903.

Act 1073, under date of March 3, 1904, provides for the construction of this road by an appropriation of ₱39,000 from the Congressional relief fund, which includes the construction of a bridge at Sariaya and at Candelaria. Construction was commenced May 2, 1904.

During the fiscal year the road was entirely cleared, and 65 per cent of ditching and grading and 40 per cent of the surfacing was completed.

The special advantages to be derived from the construction of this road are (1) it facilitates communication between the western portions of the province and the capital, and (2) it is the connecting link between the Pagbilao-Atimonan road and the Bay-Tiaong road leading through the province of Laguna to the port at Bay.

Attention is also invited to the fact that this latter road connects with Calamba, by means of the Calamba-Los Baños-Bay road now under construction, and that a good road connects Calamba with Batangas. The completion of these related projects will serve for a considerable period the greater areas of the provinces of Laguna, Batangas, and Tayabas.

Mr. H. C. Humphrey, provincial supervisor of Tayabas, has been in charge of this construction. The maximum number of laborers employed is about 250.

Money statement.

Amount appropriated, Act 1073, March 3, 1904.....	P 39,000.00
Expended to June 30, 1904.....	8,420.085
Balance available July 1, 1904.....	30,579.915

Bay-Tiaong road, provinces of Laguna and Tayabas.—This road is of an interprovincial nature, connecting the northwesterly portion of Tayabas Province through Laguna Province to the port of Laguna de Bay. It is essentially the repair of an existing road, and aids in alleviating a condition of distress and famine existing through this locality. The region traversed is fertile and the cost of transportation of agricultural products to the market will be materially decreased.

The northerly portion of the road consists of heavy lowland work through rice paddies; the southerly portion is on ground of more suitable material. The roadbed is constructed with a surfaced material 12 feet wide, and with the exception of a 9 per cent grade for a short distance is practically level.

The construction of this road was provided for by Act 1073, dated March 3, 1904, appropriating P144,600 from the Congressional relief fund for the purpose specified.

Construction commenced March 25, 1904, under the direction of the provincial supervisor of Laguna, Mr. D. A. Sherfey. The work was fairly under way at the end of the fiscal year and was employing a force of about 300 laborers. Notwithstanding the local conditions of distress, 50 per cent of the laborers on this road are recruited from outside the province.

Money statement.

Amount appropriated, Act 1073, March 3, 1904.....	P 144,600.00
Expended to June 30, 1904.....	12,495.27
Balance available July 1, 1904.....	132,104.73

Calamba-Los Baños-Bay road, Laguna Province.—The Calamba-Bay road is of special importance for securing forage and for operations from the military post at Los Baños, connecting the same with Calamba and the highway leading southerly to Batangas and with Bay and the highway therefrom leading southerly to Lucena.

Its length is about 11.5 miles through low ground for the greater portion of the distance. It forms an important link of a coastal road around the southerly coast of Laguna de Bay.

Its construction was provided for by an appropriation of ₱34,000, Act 1074, enacted under date of March 3, 1904, from the Congressional relief fund.

The superintendency of this road is in charge of Mr. Charles O. Thomas, first lieutenant, First Cavalry, United States Army, constructing quartermaster of the army post at Los Banos.

The appropriation provided for is not sufficient for the construction of road work. However, it is estimated that no additional appropriation will be needed on account of the large amount of transportation and equipments that are available to the superintendent from military resources.

In general, transportation is now so scarce and expensive that effective road work in many localities is almost prohibited. In case the transportation available at many of the military posts can be utilized on road construction, in accordance with provisions similar to those of Act 1074, several roads of importance to both the civil and military authorities may be prosecuted with small cost to the former and without additional expense to the latter.

Money statement.

Amount appropriated Act 1074, March 3, 1904.....	₱34,000.00
Expended to June 30, 1904.....	2,686.90

-------------------------------------	-----------

Carcar-Barili road, Sogod-Putad road, Province of Cebu.—These roads are in the south central and northerly portion of the island of Cebu, respectively, and were provided for by Act No. 1000, under date of November 20, 1903, by an appropriation of ₱56,000 from the Congressional relief fund for the Carcar-Barili road, and ₱178,000 from the same fund for the Sogod-Putad road.

Surveys of these roads were authorized June 15, 1903, and were completed October 10, 1903, by Mr. W. G. Hunter, assistant engineer. The cost of the surveys for the two roads was ₱1,154.88.

The Carcar-Barili road extends from Carcar on the easterly coast of Cebu, westerly for a distance of 12.25 miles, over the Cordillera Central to Barili on the western coast of Cebu. The principal object in the construction of this road is to facilitate communication between the westerly coast of Cebu and the capital, to reduce the cost of transportation of supplies to market, and to aid the movements of the constabulary.

Construction of this road was commenced January 18, 1904, under the direction of the supervisor, Mr. H. C. De Lano.

The maximum number of laborers employed was about 1,150. It is proposed to use the equipment purchased for this road for the construction of the Sogod-Putad road.

The road, excluding bridges, of which 50 per cent remain to be built, was practically completed at the end of the fiscal year. A percentage of the cost of equipment will be chargeable against the Sogod-Putad road, and no further appropriation for the completion of this work will be necessary.

Money statement.

Amount appropriated Act 1000, November 20, 1903	₱ 56,000. 00
Expended to June 30, 1904.....	52, 136. 67

Balance available July 1, 1904.....	3, 863. 33
-------------------------------------	------------

No construction work had been commenced at the end of the fiscal year on the Sogod-Putad road. This road begins at Sogod on the easterly coast of Cebu, and extends westerly for a distance of 16.3 miles to Putad on the westerly coast. The reasons for constructing this road are similar to those necessitating the construction of the Carcar-Barili road.

Plans for early commencement of this work are under discussion. The construction of these two roads, in connection with the coastal roads of Cebu will place remote portions of the province in much closer communication with the provincial capital.

Money statement.

Amount appropriated Act 1000, November 20, 1903.....	₱ 178,000. 00
Expended to June 30, 1904.....	4, 534. 64

Balance available July 1, 1904.....	173, 465. 36
-------------------------------------	--------------

Bacon-Sorsogon-Gubat-Bulusan road, Sorsogon Province.—The construction of this road was provided for by Act 920, under date of October 3, 1903, appropriating the sum of ₱80,000 therefor from the Congressional relief fund.

The total length of this road is about 33 miles, connecting Bacon on the Pacific Ocean with Sorsogon on the China Sea, thence to Gubat on the Pacific, and thence southerly along the Pacific coast on the easterly side of the province to Bulusan. Construction began December 1, 1903.

This road traverses some of the principal hemp regions of Sorsogon, and its completion will be of great value in reducing the expenses of transporting products to market, in facilitating the movements of officials, and in the development of the province. The roadway passes through level country for the greater distance, a maximum grade of 5 per cent being encountered for a short distance.

The superintendency of this road was divided between the military and civil authorities, Capt. A. C. Dalton, Twenty-sixth Infantry, constructing quartermaster of the military post at Bacon, having charge of the Bacon-Sorsogon portion, and having built about two-thirds of this portion, or a distance of 4 miles, at a cost of ₱3,571.53. The low expense for the construction on this section was due to the fact that Captain Dalton had control of military equipment and transportation, thereby greatly reducing its cost.

The remaining portion of the road was under the charge of the provincial supervisor, Mr. H. L. Stevens, and at the end of the fiscal year was practically completed.

The Gubat-Bulusan portion of this road furnishes the only means of marketing the hemp and other products.

Telephone poles for the use of the constabulary have been erected along the entire length of the road.

The supervisor reports tangible signs already of the beneficial effects of this work, several farms having been opened up while the

road was in process of construction, and several houses having been erected.

The maximum number of laborers employed on this road was about 350.

Five steel bridges, which still remain to be erected, have been requisitioned for; the sum of ₱20,000 remains available for these bridges. While the original appropriation will not furnish sufficient funds for the completion of this entire project, no additional appropriations will be necessary, the financial condition of the province permitting the completion of the work without further assistance.

Money statement.

Amount appropriated Act 920, October 3, 1903	₱80,000.00
Expended to June 30, 1904.....	59,455.79
Balance available July 1, 1904.....	20,544.21

Padre Juan Villaverde Trail, provinces of Pangasinan and Nueva Vizcaya.—Surveys for this trail were authorized under date of June 6, 1903. Various investigations made by the provincial supervisor of Nueva Vizcaya and by constabulary officers estimated the cost of this trail at about ₱6,000.

Act 920, under date of October 3, 1903, provided ₱8,000 for the construction and repair of this trail, which forms practically the only outlet for the province of Nueva Vizcaya. Starting from Bayombong, the capital of Nueva Vizcaya, it crosses the mountains range and terminates at San Nicolas in Pangasinan, connecting there with the provincial road from San Nicolas to Bautista and from San Nicolas to Dagupan. The total length of the trail from Bayombong to San Nicolas is 62 miles. Construction work commenced November 16, 1903, under the superintendency of Mr. L. W. Wilson. The work involved was found to be much larger than previously estimated, and a closer survey of this road by Mr. L. E. Bennett, ex-governor of the province, gave an estimated cost for the entire project of ₱70,000. Additional appropriation, amounting to ₱62,000, was provided for by Act 1083, under date of March 10, 1904, and Mr. Bennett, as superintendent, began construction work March 28.

This trail is constructed for pack trains only; it has a width of 2 meters with occasional turn-outs. Through the mountain region over a distance of 20 miles it is difficult side-hill work. The grades in general are fair for a trail, and follow quite closely the original location reported to have been made by Padre Juan Villaverde. The trail for a considerable portion in the mountain region passes through uninhabited regions. The maintenance of this trail will be a somewhat serious problem, and should receive careful attention, particularly for the first two or three years. The present plan is to establish maintenance gangs for each section of about 10 miles of trail, some member of the gang daily to inspect the trail during the rainy season and see that slides or other obstructions are quickly removed.

The work is practically completed at the end of the fiscal year. The maximum number of laborers on this work was about 1,300. The labor has been largely recruited from the Igorrotes inhabiting the province of Nueva Vizcaya.

Money Statement.

Balance available July 1, 1904.....	20,865.31
-------------------------------------	-----------

Magdalena-Santa Cruz road, Laguna Province.—This road forms a portion of an interprovincial road connecting the provinces of Laguna and Tayabas by way of Luisiana and Lucban. Location of the road from Magdalena to Lucban is under investigation. The completion of this road will open up the fertile territory southeast of Laguna de Bay and furnish facilities for reducing the expenses of transporting products to the markets.

Act No. 1073, dated March 3, 1904, provides P70,000 for the construction of this road. Its length is 4.5 miles through low ground. Heavy embankment work with durable surfacing will be required.

Mr. Sherfey, provincial supervisor of Laguna, and superintendent of the Bay-Tiaong road is also in charge of this construction, work on which will be begun as soon as opportunity is afforded.

The following tabulation gives a summary of the above-described projects under process of construction by the bureau of engineering:

Summary of road projects under special acts appropriating insular funds.

Termini of roads.	Provinces.	Length. <i>Miles.</i>	Act. number and date.	Appropriation.	Extended to June 30, 1904.	Remarks.
Vigan.....	Ilocos Sur.....	22	920, Oct. 3, 1903.	P 80,000	P 79,877.22	Completed except bridges
Bangueo.....	Abu.....	50	1016, Nov. 30, 1903	360,000	76,928.73	About one-fourth completed.
Capas.....	Tarlac.....	20.5	1015, Nov. 30, 1903.	174,000	59,224.20	About half completed.
O'Donnell.....	Zambales.....	18	918, Oct. 2, 1903.	50,000	49,333.12	Nearly completed.
Pagobilaro.....	Tayabas.....	6	1073, Mar. 3, 1904.	39,000	8,420.08	Do.
Antimonan.....	do.....	18	do.....	144,600	12,435.27	Work under way.
Pasacao.....	Ambos Camarines	11.5	1074, Mar. 3, 1904.	31,000	2,656.90	Do.
Lacena.....	Tayabas.....	12	1000, Nov. 20, 1903	56,000	52,136.67	Completed except bridges.
Saraya.....	Laguna.....	16	do.....	178,000	4,534.64	Construction not commenced.
Bay.....	do.....	33	920, Oct. 3, 1903.	80,000	59,453.79	Road completed; steel bridges to be erected.
Tuong.....	Laguna.....	63	do.....	8,000	Nearly completed.
Calamba.....	Tayabas.....	4.5	1003, Mar. 10, 1904.	62,000	49,134.09	Construction not commenced.
Los Baños.....	Laguna.....	274.5	1073, Mar. 3, 1904.	70,000	Construction not commenced.

NOTE: All appropriations from Congressional relief fund.

ROADS SURVEYED AND CONSTRUCTION RECOMMENDED, BUT NOT AUTHORIZED.

Abuyog-Baybay, Leyte Province.—Surveys of this road were authorized under date of December 20, 1902, and were completed by Mr. W. W. Coleman, assistant engineer, in March, 1904. The proposed road, 32 miles in length, will cross the south central portion of the island of Leyte from Abuyog on the easterly coast, to Baybay on the westerly coast. The region traversed is fertile and thickly settled. The province proposes to complete the construction of the coastal road from Tacloban south to Abuyog, to repair the coastal road on the western part of the island, and by the construction of this projected road to render the westerly coast of the island more accessible to the provincial capital.

The advantages of this road in the development of the resources of the island are large. At present the only means of communicating with the western coast of the island is by vessel. The estimated cost of this road is ₱290,000. Provincial funds will be exhausted in the repair and construction of roads immediately necessary.

This project was favorably recommended July 18, 1904, and is now before the Commission for action.

Ligao to Tabaco and Guinobatan via Jovellar, Albay Province.—The principal road of this province leads from Legaspi, the seaport of Albay, northwesterly through the central part of the province by way of Camilig, Guinobatan, Ligao, and Libong. The Ligao-Tabaco road connects this road from Ligao, through the north central portion of the province, with Tabaco, a port on the easterly coast reported to be the best natural port existing in this province, and it passes through the rich hemp regions of the province. Its length is 17 miles.

The Guinobatan-Jovellar road extends from Guinobatan, located on the principal road of the province southerly to Jovellar, a distance of 9.75 miles, through a thickly populated and fertile region. These roads are regarded as of large importance in the transportation of hemp to the seaports, in the development of the province, and in the suppression of lawlessness. Numerous petitions for their construction have been made by the inhabitants. Provincial revenues do not permit this expenditure.

Estimated cost of these two roads is ₱230,000. The proposition was submitted with favorable recommendations, but action has been deferred by resolution of the Commission under date of May 11, 1904.

Camilig to Paniqui, Tarlac Province.—This road is located in the northern part of the province, and connects San Miguel de Camilig with Paniqui, a station on the railroad. Surveys were authorized January 11, 1904, and completed February 24, 1904. The length of the road is 12 miles, 2 miles of which are in good condition, the remaining distance requiring thorough repairs.

The road is the only outlet for the northern portion of the province to the railroad, and is of considerable importance in reducing expenses of transportation in the province. The region traversed produces large quantities of rice. The importance of the road is both local and provincial, but the revenues of the province do not permit undertaking this work. The report on this road recommending an appropriation of ₱52,800 was submitted March 11. Action on the same was deferred by resolution of the Commission May 11, 1904.

Solano-Banaue trail, province of Nueva Vizcaya.—Surveys of these trails were authorized February 24, 1904, and were made by L. E. Bennett, assistant engineer, and practically finished within the fiscal year. These trails lead from Bayombong northerly by way of Solano, Bagabag, Payauan, Pindungan, and Banaue to Ambuyuan in the province of Lepanto-Bontoc, a distance of 55.5 miles. Additional trails connecting therewith and leading to Quingan, to Alimit, and to Sapao increase the distance to a total of 83.3 miles. The proposition is to build a trail 2 meters in width with occasional turn-outs. The project is of importance in the control of this region in the movements of the constabulary and provincial officials, in the transportation of supplies, mail, etc. This construction would be of large value in bringing adjacent barrios and municipalities of both the civilized and uncivilized inhabitants into closer communication with one another. It traverses fertile regions for a considerable portion of its length, and passes through remarkable irrigating works constructed by the Igorrotes, and is of interprovincial importance.

The estimated cost for the 83.3 miles of trail is ₱60,000. The project is before the Commission awaiting action.

Cotta-Barra road, Tayabas Province.—The purpose of this project is principally for the development of the port of Lucena, and includes the construction of a small landing wharf. The location of the port is exposed; boats necessarily anchor some distance out, on account of the bar at the mouth of the river, and lighterage will be necessary, regardless of the proposed improvements. The highway from Lucena to Cotta, the present port, is of substantial construction. The distance from Cotta to Barra is about 3 miles through low land and sparsely populated territory. The construction of the road would be expensive, and its advantages would consist principally in the reduction of lighterage from a distance of about 4 miles at present to a distance of about 1 mile.

The estimated cost, including a bridge at Cotta and a small dock at Barra, is ₱24,000. Provision for this construction was deferred by the Commission under date of May 20, 1904.

The following tabulation shows the total length and estimated cost of these six roads:

Length and estimated cost of roads.

Termini.	Province.	Length.	Estimated Cost.
		<i>Miles.</i>	
Abuyog-Baybay.....	Leyte.....	32.00	₱290,000
Ligao-Tobaco.....	Albay.....	17.00	230,000
Gumobatan-Jovellar.....	do.....	9.75	
Camiling-Paniqui.....	Tarlac.....	12.00	52,800
Solano-Banaue.....	Nueva Vizcaya.....	83.30	60,000
Cotta-Barra.....	Tayabas.....	3.00	24,000
Total.....		157.05	656,800

The following tabulation shows the location and approximate length of roads surveys of which have been authorized and are in progress:

HIGHWAY BRIDGES NOT INCLUDED IN OTHER ROAD PROJECTS.

Parañaque, Rizal Province.—Authorization of investigation on which to base designs and estimates for a bridge across an estero at Parañaque, Rizal Province, is dated December 19, 1902. This bridge was built by the military authorities, probably in 1900, and consisted of a pile trestle 232 feet long, constructed of native timber. It was abandoned early in 1903, the piles having been destroyed by the action of sea worms. A ferry, consisting of three bancas to which a platform is attached, was substituted therefor. While the site is favorable for the erection of a steel bridge, a protected pile trestle bridge was designed and recommended for construction on account of its suitability, convenience of maintenance, and because the first cost, ₱15,000, is about one-half that of a steel structure.

This project is now before the Commission.

Bayombong-Bautista, Pangasinan Province.—Investigations relative to this proposed bridge across the Agno River were authorized under date of August 28, 1903, and the same were made by Mr. C. F. Vance, supervisor. A bridge about 500 feet in length will be required. The cost of piers and abutments will be expensive, since soft material exists at the site of the proposed bridge to a depth of about 40 feet. On this account the cost of a seven-span railroad bridge, 494 feet long, near this proposed site, was ₱245,000.

The conditions existing are favorable for the construction of a cable ferry, estimated cost being ₱5,200, and it was therefore recommended to the Commission November 16, 1903.

Culmay River bridge at Dagupan, Pangasinan Province.—This bridge is one of the two principal bridges in Dagupan. It consists of 31 pile bents, spans 20 feet each, and was rebuilt about three years ago. One span, movable to permit the passage of small steamers and lorchas, had been closed on account of the weakened condition of the trestle. Investigations of this structure were authorized under date of August 14, and report thereon submitted August 25, 1903.

A new structure will soon be necessary, and the construction of a steel bridge having a movable span giving a clear channel 25 feet in width has been recommended. The province is now devising means for providing funds for the construction of a steel bridge across the Calmay River and one across the Pantel River; estimated cost, about ₱100,000.

The provincial supervisors are keenly aware of the necessity of increased transportation facilities in the development of the various provinces, and that the prosecution of road work is equivalent to the establishment of a practical and extensive manual training school, resulting in large civilizing influences and in agricultural and commercial developments. The estimate has been made that on the average each province would require for a reasonably complete development of its resources about 400 miles of road, at a cost of ₱2,000,000 for construction and repair. The desired results may be attained in the course of several years by a comprehensive system outlined for each province, and the work accomplished based only on such a system.

The provincial law requires that taxes to the amount of one-eighth of 1 per cent of the assessed valuation of land shall be collected and applied to the construction and repair of roads and bridges. In general all of the provinces have also drawn from the general funds on account of the present inadequacy of this measure. Unfortunately the existing conditions require that a large percentage of available resources shall be given to minor repairs, making the road passable during the dry season, and that this expense must be incurred annually on identical roads, without any permanent repairs being accomplished.

During the past fiscal year, while the revenues of the provinces have been light and while the duties of the supervisors have been largely in other lines, considerable activity has been shown in road construction. The aggregate provincial expenditures for the repairing of roads and bridges, as per the annual reports of the supervisors, is ₱961,327.67, nearly equaling the amount appropriated from Congressional relief funds by the special acts cited. The aggregate total mileage of roads constructed and repaired is 1,915.3 miles, of which 252.7 miles is new construction.

It is significant to note that while all of the appropriations for the roads previously discussed are from the Congressional relief fund, the government has assisted the provinces from this same fund for a similar purpose to the extent of ₱537,885.41. In other words, it appears that provincial and municipal revenues have furnished only ₱423,442.26 for this important work, and that practically none of the insular revenues have been expended for road repair and construction.

It is desirable that the progress attained during the past year on the improvement of roads should continue for a period of at least five years, in order that the necessary system of highways required by the agricultural interests may be constructed in a fair and reasonable manner, and that suitable laws providing for the preservation of constructions and for the maintenance of highways may be enacted. The compilation of such laws is in progress, and will be submitted for action in the near future.

HARBOR IMPROVEMENTS UNDER CONTRACT.

Cebu Harbor improvements.—A description of this project appears on pages 210–211 of the Report of the Philippine Commission, 1903, part 3.

Advertisement of this contract was made under date of May 1, 1903, bids to be opened June 15, 1903. Jones & Smith, of Manila, P. I., were the only contractors submitting bids on this project. On account of irregularity in several items, their bid was rejected and the project was readvertised under date of October 1, 1903, bids to be opened February 1, 1904. Advertisement was made in the islands and in the United States, plans, specifications, and proposals being placed on file at the United States engineer offices in New York, Chicago, San Francisco, and Portland, and at the Bureau of Insular Affairs, Washington, D. C. The opening of bids was postponed from February 1 to March 1, and J. G. White & Co., of New York, were the only bidders. Contracts were entered into with this firm under date of March 30, and approved by the civil governor April 5, 1904.

The contractors requested certain modifications of plans and extension of time for beginning work on the project. Supplemental specifications and contract were signed June 17, 1904, and approved by the civil governor. Under this supplemental agreement the estimated cost of the project is \$452,910.07. Additional to this sum, the government will be required to furnish to the contractor about 30,000 barrels of Portland cement.

The time of beginning work was extended to April 1, 1905, completion to be September 1, 1906. The original contract aggregated, as per quantities specified, \$493,727.07 under proposal "A," and \$469,402.21 under proposal "B," contractor's plant to be transferred to the government of the Philippine Islands.

Quantities and prices contained in the final proposal follow:

Material.	Quantity.	Unit price.	Amount.
Concrete.....cubic yards..	30,600	\$6.30	\$192,780.00
Gravel filling (as required).....		a .85	
Oregon fir piling.....linear feet..	123,300	.90	110,970.00
Dungeon piling, including cast-iron caps (as required).....		b 2.50	
Oregon fir timber, including bolts, spikes, etc.....feet B. M..	510,160	c 75.00	40,512.00
Dungeon timber, for fenders and backlogs, including bolts, spikes, etc.....feet B. M..	63,610	c 175.00	11,131.75
Riprap stone in place (as required).....		a 2.50	
Dredging (to be paid for as fill).....cubic yards..	203,159	.48	97,516.32
Iron used in snubbing posts or cavels, in place (as required).....		d .10	
Grand total.....			452,910.07

a Per cubic yard.

b Per linear foot.

c Per thousand.

d Per pound.

Iloilo Harbor improvements.—This project is described on page 211, Report of the Philippine Commission, 1903, part 3.

The advertisement for this contract was made coincident with that for the Cebu project and similar action was taken thereon. The bids were opened March 1, 1904, and contract with J. G. White & Co., of New York, was entered into under date of March 30, 1904, and approved by the civil governor April 5. The amount of the bid was \$229,752.50.

An extension of time in beginning work was requested and approved, work to begin January 1, and to be completed November 1, 1905.

Material.	Quantity.	Unit price.	Amount.
Fascines, including saplings in place.....cords	5,340	\$4.00	\$21,360.00
Piling in place.....linear feet	25,400	.70	17,780.00
Stone in place, complete.....tons	30,050	2.25	67,612.50
Dredging, including back filling, complete.....cubic yards	410,000	.30	123,000.00
Total.....			229,752.50

While the above contracts for Cebu and Iloilo harbor improvements are in excess of the appropriations provided for by acts 640 and 641, a resolution of the Commission, dated July 19, 1904, confirms the contracts and states that appropriations will be made when necessary to cover the additional expense.

Temporary timber wharf at Cebu, P. I.—The necessity of relieving the expensive and congested lighterage condition of this harbor prior to the completion of the larger project was met by purchasing the Veloso dock and constructing an extension thereto. Authorization for an expenditure of \$30,000 for this work is dated September 25, 1903. Advertisement of this contract was made under date of October 27, 1903, bids to be opened November 24. The contract was awarded to Messrs. Jones & Smith, Manila, whose bid follows:

4,000 linear feet of piles, at \$1.79.....	\$7,160.00
4,000 feet B. M. of walgs and horizontal ties, at \$1.75.....	700.00
54,000 feet B. M. of caps, braces, and decking, at \$.95.....	5,076.00
1,100 cubic yards of embankment, at \$2.70.....	2,970.00
Total.....	15,906.00

Act 1020, dated December 4, 1903, appropriates \$20,000 for this project. The contract was entered into and approved by the civil governor under date of December 29, 1903. The project was to be completed on May 1, 1904. On account of difficulty in securing piling and other timber, the contractors requested an extension of sixty days in order to complete the work. This request was granted, under approval of the civil governor, May 6, 1904. Further extension of time for completion of project to July 24 was granted June 28, 1904. At the end of the fiscal year the contractors had earned on this project \$8,837.70. The work is still under prosecution and it is probable that further extension of time will be necessary.

Repairs to the sea wall at Iloilo, P. I.—The sea wall at Iloilo was constructed prior to American occupation. It consists of a thin rubble wall resting on a riprap foundation. This foundation failed and the wall was ruptured for a length of about 300 feet.

Repairs were authorized by resolution of the Commission under date of January 6, 1904. Work was commenced January 25 and finished March 30, 1904, at a cost of ₱1,250.50, under the immediate direction of Mr. M. W. Tuttle, provincial supervisor. The cost was paid out of the regular appropriation for public works, bureau of engineering.

Practically all of the harbors are lacking proper wharfage facilities. Vessels necessarily anchor about 1 mile from shore, and lighterage is accomplished by cascoes, from which the goods are packed to the beach by men or carabao carts, which are driven as far as possible into the surf. The resulting expense in the discharge or shipment of cargoes is large and considerable damage to goods is incurred.

The characteristic bar formation at the mouth of the larger rivers prevents their utilization by seagoing crafts. The areas served by these rivers are comparatively extensive. Tabulations showing the principal rivers appear on pages 217-222, part 3, Report of the Philippine Commission, 1903.

While liberal provisions have been made during the past year to meet the needs of the ports of Manila, Cebu, and Iloilo, measures to provide suitable piers or wharves for the smaller harbors and to extend the possibilities of water transportation have been slight.

An examination of the vessels engaged in coastwise trade shows that it is desirable in dredging and pier construction to provide for a draft of at least 12 feet, and preferably of 18 feet, while at the more important harbors, as Manila, Cebu, and Iloilo, provision must be made for the ocean vessels engaged in export trade.

Additional to the importance of this subject in the development of the islands, it is probable that the construction of suitable piers would furnish reasonable returns on the money invested, provided equitable wharfage fees were collected.

The saving per ton of cargo shipped or discharged at a small pier instead of by the usual lighterage method is estimated at ₱1. In general the provincial capital and military post are adjacent to the more important harbors. A large proportion of this saving would accrue immediately to the government, since a similar proportion of the trade is required by the civil and military authorities.

These piers must be constructed of material capable of resisting the attack of the teredo and other sea worms. A few varieties of native timber are satisfactory for such purposes, as well as concrete and iron.

The following tabulation shows the minor projects on harbor improvements, investigations of which have been authorized:

Location.	Date of authorization.	Proposed construction.	Remarks.
Batangas, Batangas....	Oct. 10, 1903	Pier.....	Investigation completed and submitted to Commission Jan. 10, 1904; estimated cost, ₱50,000; action postponed indefinitely May 4, 1904.
Lucena, Tayabas.....	Oct. 2, 1902	Pier and jetty....	Investigation completed and submitted to Commission Dec. 23, 1904; estimated cost ₱1,400,000; construction not recommended.
Lake Nanguyudan, Ilocos Norte.	Oct. 27, 1902	Harbor of refuge..	Preliminary report submitted July 6, 1904; expenses of construction large; not recommended; action indefinitely postponed.
Puerto Princesa Paragua.	Jan. 6, 1904	Pier.....	Investigation in progress.
Pasacao, Ambos Camarines.	Feb. 9, 1903	Jetty.....	Do.
Tacloban, Leyte.....	Mar. 22, 1904	Pier.....	Do.
Legaspi, Albay.....	Mar. 23, 1904do.....	Do.
Vigan, Ilocos Sur.....	Sept. 22, 1904	Pier and jetty....	Do.

Investigations have been requested, but not authorized, for harbor improvements at Tagbilaran, Bohol; Aparri, Cagayan, and at San Fernando, La Union.

Control of the Tarlac and Pampanga rivers.—The project is briefly described on pages 212-213, part 3, Report of the Philippine Commission, 1903. While no comprehensive system of surveys has been authorized, data are being collected from various surveys on highways by assistant engineers and supervisors. Several gauges have been

set, high and low stages of the water are being determined, and data on rainfall compiled. The coast and geodetic survey are arranging a system of triangulation from Manila Bay to the Gulf of Lingayen, which will cover the greater portion of the affected area and reduce the cost of the necessary topographical surveys.

Special investigations for the control of the Tarlac River are in progress, which will decrease the high-water stages of the Pampanga in case the proposed works are constructed.

These areas subject to overflow include some of the richest rice land in the islands and are thickly populated. The proposed protection in connection with a control by the government of the irrigation system-connected therewith is a problem of large importance. It will require extended observation and the collection of reliable data before designs and estimates can be completed, and it merits insular assistance.

River encroachments.—Heavy precipitations during the rainy season and the steep rocky slopes at the upper portion of practically all watersheds cause destructive high-water stages with a swift velocity in all of the principal rivers. The typical alluvial formation of the lowlands gives a river bank capable of offering but a slight resistance to floods, resulting in an encroachment of the river upon the various town sites. Several requests have been made by various municipalities for the construction of protective works. In general, the banks are high and the cost of proposed works is large in comparison with the value of property protected. Insular revenues can not fulfill all requests presented for protection to private interests. United action by the owners of endangered property to meet the necessary expense is not attempted.

Surveys and investigations on which designs and estimates of cost may be based have been authorized for the following:

Santa, province of Ilocos Sur.—This town is located on the Abra River and has a population of 1,904. The general elevation of the land is 25 feet above low water and it is overflowed in times of high floods. The soil is fine sand and clay. Investigations were authorized September 22, 1903, and are now in progress.

San Isidro, province of Nueva Ecija.—This town is the capital of the province and located on the Rio Grande de la Pampanga. It has a population of 5,084. The local features are similar to those at Santa.

Investigations of a general nature were authorized in connection with the overflow of the Tarlac and Pampanga rivers and are in progress.

Calivo, Capiz Province.—This town is located on the Aclan River and has a population of 3,547. It is one of the most important towns and shipping points of the province. Local features are similar to those at Santa. Investigations were authorized March 2 and are now in progress.

Pansipit River improvement, Batangas Province.—This project is briefly described on pages 211–212, part 3, Report of the Philippine Commission, 1903.

Estimates of the cost of a canalization of the river, the entrances thereto from the lake and the ocean, and the necessary bridge, lock, and dam construction required, based upon revised design for a construction suitable for vessels of 10-foot draft, aggregate ₱1,522,000

This cost, in connection with additional harbor work necessary within the lake, and the probable development of railroads through the region served, justifies the recommendation that further action be delayed until the necessities for improved transportation warrant the necessary outlay.

Apat Canal, Tayabas Province.—Authorization of a reconnaissance survey to determine the possibilities of water communication connecting the Pacific Ocean and the China Sea from the Bay of Apat to the Gulf of Ragay, Tayabas Province, by the construction of a canal between the headwaters of the Apat River and the Guinayangan River is dated November 30, 1903. At present these rivers are of slight importance. The location through which this improvement would pass is sparsely inhabited and the topography is not well known.

The distance across Luzon at this peninsula is about 25 miles; the distance to the San Bernardino Straits is about 150 miles. The decrease in time for vessels sailing from the eastern coast of the island to Manila would be about one day. The advantage to local shipping would be of large value.

No work has been done by the coast and geodetic survey in the terminal bay and gulf, and it has been reported that extensive shoals exist in the vicinity of the mouths of these rivers.

A survey party is now in the field, to whom this investigation has been assigned.

WATER-POWER DEVELOPMENT.

Botocan Falls.—Investigation relative to the development of the Botocan Falls, briefly described on page 214, part 3, Report of the Philippine Commission, 1903, were completed November 7, 1903. The final report by Mr. A. H. Perkins, assistant engineer, was submitted to the Commission December 22, 1903. These investigations indicated an expense necessary for suitable development somewhat high as compared with the power available.

The total cost of these surveys was ₱9,556.67.

Caliraya River.—Mr. Perkins began investigations of the Caliraya project November 11, 1903, and his report thereon was submitted to the Commission March 23, 1904. The development of this river is a more feasible project than the one described above. The need existed for more accurate and extended data on minimum discharge, rainfall, and area of watershed. Mr. H. F. Labelle, assistant engineer, was assigned to this work on April 22, 1904. Extensive gaugings of the stream were made to determine the low-water flow, the watershed area was surveyed, and, through the courtesy of the Philippine weather bureau, a rain gauge was established at San Antonio, a town located within the watershed. A river gauge was also established. Observations at these two stations are now in progress.

The theoretical horsepower available at the proposed power house, with a moderate storage, is estimated at about 6,000. For about one-half of the year, or during the rainy season, this amount can be trebled.

Cost of Caliraya surveys from November 11, 1903, to September 1, 1904, was ₱7,971.38.

The constructive features of this development are as follows: By the construction of a dam on the river the water would be diverted into a canal 2.33 miles long to the brow of the bluff, where it would fall through penstocks 800 feet to the power house near the Lumbang River. The power would thence be transmitted to Manila, a distance of 61 miles. To meet the dry-season flow and husband the flood waters storage reservoirs would be established on the river at suitable points. Mr. Labelle's report dealing with the above features is in progress. This development can be carried out at comparatively small cost and does not require exceptional engineering features. The capacity of the plant can be increased at any time by diverting the Lomot River to the Caliraya. The question of storage, which is the life of the whole project, should, however, be solved satisfactorily before the feasibility of the development can be determined. It is very probable that the necessary reservoir sites will be found in the watershed.

Angat River.—Mr. J. G. Holcombe, principal assistant engineer, made an examination of the power development of the Angat River, proposed by the Electricista Company, and for which a franchise was requested August 27, 1903.

This preliminary examination shows that it is feasible to develop the proposed 6,000 horsepower. The estimated cost is understated, and it now appears that either the Botocan or Caliraya projects are preferable thereto on account of the first cost of the proposed project.

The project involves the construction of a dam, a tunnel 1,354 meters in length, a canal 10.26 kilometers long, with one viaduct crossing the Angat River, and leading to the first power house, at which a head of 40 meters is available; thence the water is lead by a canal 5 kilometers long to the second power house, where 21 meters head is available.

Agno River.—During May, 1904, a preliminary examination was made of the Agno River, southern part of Benguet Province, by Mr. L. E. Bennett, superintendent, Padre Juan Villaverde trail, with a view of determining the feasibility of the power development of that river. These investigations show that practically 3,300 horsepower might be developed by the low-water flow. However, the country is very rough and difficult of access, and no further action is proposed until the information already acquired can be laid before the expert, whose services are provided for by Act No. 638.

MUNICIPAL WATERWORKS.

Calapan, Mindoro Province.—Investigations upon the feasibility of constructing waterworks and insuring a supply of pure water for this town were authorized August 28, 1903. The population of the town is 1,294. Investigations were made by Maj. J. F. Case, engineer, new waterworks system, city of Manila, and his report was submitted to the Commission November 15, 1903.

This investigation was desired mainly in view of a proposition to change the provincial capital from Calapan to Puerta Galera, on account of increased harbor facilities and the water supply available at the latter place.

Pagsanjan, Laguna Province.—Surveys on which to base designs and estimate of the cost of providing a water supply for this town

were authorized April 11, 1904. Mr. Max Dobbins, assistant engineer, made the necessary surveys and his report is dated June 30, 1904. The topographical map accompanying his report is of permanent value for municipal improvements that may be desired within a reasonable period. The cost of the survey was ₱1,514.

The population of the town is 3,033 adjacent barrios to be served by the proposed supply will increase the number by 500. The project consists of pumping the water from springs of exceptional purity located about one-half mile from the town, to a reservoir on an adjacent hill, from which point the supply will be distributed by gravity. Of the three springs available only one would be utilized until there is a considerable increase in population. The estimated cost is about ₱30,000.

The interest shown by Pagsanjan in municipal improvements is noteworthy, and merits the insular assistance given in making this survey. A considerable portion of the funds necessary for this project have been raised within the municipality, but construction works have not been authorized.

LAND SURVEYS.

Government farms.—Surveys of the agricultural farms San Ramon, Mindanao, and La Granja Modelo, Negros Occidental, were authorized September 18, 1903. The former was completed January 13, 1904, by Mr. A. H. Higley, chief draftsman. A topographical map suitable for designing and estimating the cost of irrigating work was prepared. The area of San Ramon is 982.2 hectares; cost of survey, ₱1,051.70.

The latter survey was completed December 8, 1903, by Mr. J. C. Mulder, assistant engineer. The survey included the estate of Alejandria, area 134.994 hectares, the area of La Granja Modelo being 684.845 hectares, a total of 819,839 hectares. Cost of survey, ₱806.58.

Resurvey of the friar lands.—Instructions were received from the honorable the civil governor, under date of January 20, 1904, to resurvey the friar lands included in the four contracts signed December 22, 1903.

A summary of these estates as per said contracts follows:

The Philippine Sugar Estates Development Company, Limited, estates formerly the property of the Dominican Order, eight combined estates, or eleven separate estates.	11
La Sociedad Agrícola de Ultramar, estates formerly the property of the Augustinian Order (including the estate in the Province of Isabela, patented by the Spanish Government to this order, and survey of which was not attempted).....	18
The British-Manila Estates Company, Limited, estates formerly the property of the Recoleta Order.....	1
The Recoleta Order, the San José estate in Mindoro (survey of which was not attempted)	1
Total.....	31

in which the total aggregate area was given as 164,120 hectares.

The preparation of general instructions was immediately commenced upon methods of records and computations for both field and office, the organization of field parties, and the prosecution of the work, all based upon available forces, equipments, and results to be attained.

The only data available on which to base these surveys were copies of the said contracts, and tracings and tabulations prepared by

Señor Juan Villegas, surveyor, under the direction of the Commission during the years 1901-2. The field notes of Señor Villegas had been lost and destroyed by fire. Copies of the original maps, some of which were nearly 300 years old, based on surveys made by the friars, were available later, having been secured by the legal representatives, Messrs. Del Pan, Ortigas, and Fischer. These maps were of material assistance in verifying surveys made and in completing work in hand.

The greater portion of the boundaries of these estates was through regions difficult to survey by the use of the chain, on account of the dense tropical vegetation—bamboo, vines, mangrove swamps, cogon grass, etc.—and they also passed over considerable rugged country difficult of access. The number of men familiar with chaining was limited; the time within which it was desired to complete the surveys was not sufficient to train reliable native chainmen, and for other reasons it was deemed economical, expedient, and sufficiently accurate for the problem in hand to employ the familiar stadia method of measurement, under such instructions as would attain to a degree of accuracy well within the limits of error ordinarily established for such surveys; and, in general, to conform in results to the requirements of the court of land registration. Furthermore, for similar reasons, it was necessary to confine the survey to the perimeter of the estates, securing only such adjacent and descriptive topography as would assist in a relocation of the boundary lines.

Ten survey parties were placed in the field; four were sent out February 13, two the 19th, one the 20th, two the 26th, and one April 9. Field work was practically completed early in May, and the months of May and June were occupied in office work, computations, mapping, and in the preparation of technical descriptions of the various estates surveyed.

The total cost of the resurvey, including both field and office work, is ₱36,299.68. The total area involved is 158,068.54 hectares. The average cost per hectare is ₱0.31. The total length of boundary line is 577.06 miles, and the average cost per mile of boundary line is ₱73.54.

It is interesting to note that these unit costs for the smaller estates are far in excess of the total average cost, and are very irregular. This increased cost is due mainly to the high proportional cost of monumenting, transportation to and from the site of the work, and to the expenses incurred on account of office computations, mapping, printing, etc., which was much larger in proportion to area surveyed than for the larger estates.

In accordance with the verbal instructions of the honorable the civil governor, no surveys were made of the Isabela and the Mindoro (San Jose) estates.

The contract dated December 22, 1903, provides for shortages in areas as follows:

* * * That if the Philippine government shall notify * * * that the area of any hacienda or parcel as described in the title deed thereof falls short of the superficial area thereof as shown by Villegas's survey of the same, then the parties hereto shall cause a joint survey of the same to be made by the agent of each, and if the true survey shall show the area of the hacienda or parcel to be less than as stated by Villegas and in the list as hereinbefore set forth, the price herein to be paid shall be abated by an amount to be ascertained by multiplying the number of hectares short into the average value of a hectare in the hacienda or parcel in question as shown by dividing Villegas's total valuation of such hacienda or parcel by the total number of hectares contained therein according to his survey plus

twenty-five per cent thereof; and if, on the other hand, the true survey shall show an excess of hectares over the amount reported by Villegas, then the price to be paid shall be increased by an amount to be ascertained in a similar manner.

The total shortages found in the estates included in the four contracts cited, and their value as per conditions therein, are as follows:

I. The Philippine Sugar Estates Development Company (Limited) (estates formerly the property of the Dominican Order): The total shortage in area found in the five estates of Santa Maria, Orion, Naic, Calamba, and Biñan aggregates 6,050.6775 hectares, the computed value of which is ₱481,354.46.

II. La Sociedad Agrícola de Ultramar (estates formerly the property of the Augustinian order, and including the estate of Isabela, patented by the Spanish Government to this order, survey of which was not made): The total shortage in area found in the three estates of Dampol, San Francisco de Malabon, and Muntinlupa aggregates 4,155.6546 hectares, the computed value of which is ₱261,890.96. The total shortage of area found in the original maps of the Isabela estate (not surveyed) is 528 hectares, the computed value of which is ₱9,694.

III. The British-Manila Estates Company (Limited) (estates formerly the property of the Recoleta order): The total shortage in area found in the Imus estate is 176.5612 hectares, the computed value of which is ₱17,975.70.

IV. The Recoleta order (the San Jose estate in Mindoro, survey of which was not made): The total shortage in area found in the original maps of the San Jose estate is 605 hectares, the computed value of which is ₱15,953.85.

The total of these shortages in area, as per the resurveys, aggregates 11,515.8923 hectares, the computed value of which is ₱786,868.97.

A statement of these shortages has been submitted to the representatives of these four companies, in accordance with the instructions of the honorable the civil governor, and the question of a joint resurvey is now under consideration.

Special charge of the various survey parties was assigned to Mr. Charles H. Kendall, acting railroad engineer.

The following tabulations show the location of the various estates, the principal results derived, the cost of the survey, and a list of the assistant engineers in charge of the various field parties.

Tabulation of *Irria-land resurvey.*

RAILROADS.

Mr. Charles H. Kendall, assistant engineer, was assigned to the position of acting railroad engineer November 1, 1904. His report on the work accomplished by the bureau, together with a brief history of the Manila Railway Company (Limited) is attached hereto, and forms a part of this report.

The diagrams of the operation and revenues of the Manila and Dagupan Railway are especially interesting, showing graphically the principal source of revenues, the volume of business and its nature.

The length of the Manila and Dagupan Railway is 196 kilometers, the total length of extensions granted by the franchises for five separate lines contained in Acts Nos. 554, 555, and 703 is about 140 kilometers. The Cabanatuan and Antipolo extensions are important in that they may be regarded as the first sections of lines leading from Manila northerly through the central portion of Luzon and easterly to the Pacific. Their present locations are through thickly populated regions. Immediate profits upon opening these extensions are assured, and their construction tends to control the larger projects involved.

The question of a standard gauge for the islands is important, and should be settled in the near future. Already two gauges exist, namely, the 3 foot 6 inch gauge in use by the Manila Railway Company, and the United States standard gauge, by the Manila Electric Railway and Lighting Company. This company will be operating about 60 kilometers of line early in 1905. Its probable extensions, and the importance of having connections with lines operated by steam possible, make a consideration of its established gauge necessary in a discussion of this subject. Various gauges can not be successfully operated, and history shows that one gauge must ultimately be established throughout at least the island of Luzon, and preferably throughout the archipelago.

Data on this subject is being compiled from information furnished by various eastern countries, and upon completion will be presented for action. The gauge decided upon should be incorporated in all future franchises.

MISCELLANEOUS WORK.

Special committees created by resolutions of the Commission or by executive orders have required attention and in certain cases extended investigation. The following is a list of the more important committees of which the undersigned was a member:

Under date of August 24, 1903, a resolution of the Commission designated a committee to report on a topographical survey of the islands, and to recommend a system of beginning the same. The report was submitted February 6, 1904.

A committee was likewise appointed September 8, 1903, to investigate and report on existing conditions relative to the care of the insane, to investigate suitable sites and report on the cost of erecting a suitable asylum. A preliminary report was submitted under date of January 20, 1904. The work of the committee is not yet completed.

Resolutions of the Commission dated March 30 and April 7, 1903, relate to investigations for a water supply for the agricultural stock farm, the leper colony, and for the proposed penitentiary, and the selection of sites for these institutions on Culion Island, together with the location of roads, dock, and principal buildings. Mr. J. G. Holcombe, principal assistant engineer, was appointed on this committee in lieu of the undersigned April 10, 1903. This subject is briefly discussed on page 212, part 3, Report of the Philippine Commission, 1903.

Mr. W. H. Robinson, assistant engineer, completed surveys and maps of the various localities, and submitted reports under dates of August 15 and October 5, 1903. The required reports were completed and submitted to the executive secretary December 2 and 3, 1903.

The report required of the committee created by resolution of the Commission September 29, relative to procuring expert engineering advice on the new waterworks and sewer systems for the city of Manila, was submitted October 17, 1903.

The final report required of the committee appointed by executive order No. 89, dated October 17, 1903, and by resolution of the Commission dated December 29, 1903, relative to assignment of quarters in Oriente Hotel property, was submitted January 7, 1904.

Executive order No. 107, December 18, 1903, created a committee to investigate the accident at the Marivales quarry, and to determine the responsibility. This investigation required the testimony of several witnesses. The report was submitted May 12, 1904.

Executive order No. 14, March 30, 1904, appointed a committee to examine the bulkhead of the port works of Manila, to present plans for making it substantial and permanent, and the probable cost thereof, and to report on type of wharf best adapted to the needs of the port, and the probable cost of same. Several investigations were made to secure the necessary data. The report of the committee was submitted May 16, 1904.

Several minor investigations have required considerable time, data on artesian wells have been collected and compiled, standard designs of bridges and culverts for the use of supervisors and road superintendents and special designs for supervisor-treasurers have been prepared.

Questions relative to boundaries between provinces and municipalities have been studied, and a few provincial forms prepared. Various instructions for the guidance of survey parties and road superintendents have been issued.

Arrangements for the first annual meeting of the supervisors have received careful consideration. The principal subjects covered were: (1) The duties of the supervisors and laws relating thereto; (2) systematic office records; (3) organization of road repair and construction work; (4) methods of construction for various types of roads, including designs of culverts and bridges, and organization of maintenance gangs; (5) development of agriculture through a utilization of the knowledge acquired of modern methods of work and tools, etc.; (6) addresses have been requested of the heads or representatives of the bureaus, directly or indirectly related to supervisorships, as the insular purchasing agent, the auditor, the

treasurer, the civil-service bureau, etc.; (7) inspection trips have been planned to places of interest and value in connection with the works of the supervisors, as to the testing laboratories for cement and for timber, to Bilibid, to the forestry and city workshops, to the crematory, etc.

It is anticipated that the benefits of this meeting will materially assist in attaining to a higher efficiency in provincial work.

PROVINCIAL WORK.

Of the 40 provinces into which the archipelago is divided, 25 are provided with supervisors, 13 with supervisor-treasurers, the Moro Province with an engineer officer, and in Benguet these duties are performed by the provincial governor. Excepting the two provinces named, these officials are under the direction of this bureau in so far as relates to engineering work. The supervisors are, with few exceptions, men trained and experienced in engineering work. They are the only provincial officials intrusted with expenditure for public work. On account of other various duties it has been estimated that less than 15 per cent of their time is given to technical work. Also the executive bureau is placing the supervisorships more fully under the control of this bureau.

Considerable work has been done in systematizing methods of investigations, reports and construction, in simplifying provincial forms required, and in expediting provincial business in Manila. Plans for the reduction of clerical work required of the supervisor are under consideration. It is desired to utilize his services more fully along the line of engineering and construction, and to permit increased opportunity for field work.

The chief of supervisors, Mr. J. D. Fauntleroy, has immediate supervision of the supervisors in their relations to this bureau. His report is attached hereto.

ORGANIZATION AND PERSONNEL.

It has been the policy of the Philippine civil service bureau to regard this bureau as the "insular clearing house" for engineers appointed to duty, either by the bureau of insular affairs, or through examination held at Manila. It has been expected that the needs of the various bureaus employing engineers would be understood, and that a proper distribution of appointees in conformity to the necessities of such bureaus would be made. This policy has been met as fully as possible, although frequently experienced technical men were not available. Efforts to secure for service in the islands recent graduates thoroughly trained in the principles of engineering have not been successful in the past, and the demand has exceeded the supply. At present, however, the prospects of securing such assistants are more encouraging. The engineer of greatest use to the government should acquire, additional to high technical efficiency, a working knowledge of the language and an acquaintance not only with local conditions, but also with the characteristics of the inhabitants.

The demand upon the engineer has been for results rather than theories. Existing conditions offer to the young engineer opportunities for valuable experience and reasonably rapid promotion. The development of public works in the islands has been somewhat

crippled by the necessity of appointing men not sufficiently trained for the duties required. The bureau has been compelled to draw from its experienced men for filling technical positions required by other insular bureaus. It has been necessary to draw from the same source for the appointment of the provincial supervisors who are required by law to be engineers. It has also been necessary to detail assistant engineers to supervisorships made temporarily vacant by the supervisors who are taking advantage of accrued leave; also to detail engineers to provinces in which the office of supervisor does not exist, in order to take charge of public works when sufficient provincial funds have been accumulated to make such detail desirable.

The growth of the bureau measured by the somewhat unsatisfactory standard of correspondence handled is shown by the fact that at the beginning of the fiscal year about 500 communications were handled monthly, increasing to 1,500 at the close of the year. Measured by the total money expended for the operation of the bureau alone, its growth is shown by the fact that while about \$3,000 was expended monthly at the beginning of the fiscal year, this amount was increased to \$9,600 at the end of the year.

On account of these conditions all attempts to effect a permanent organization have been difficult to accomplish. It now appears that the work of the bureau is on a reasonably normal plane, and that the present organization will be more effective in discharging its duties and responsibilities. This organization consists of a subdivision of the bureau into the following general divisions:

DIVISION OF RECORDS.

(In charge of the chief clerk.)

This comprises all office records, excepting maps and field books; all property; receiving and mailing of all correspondence; the preparation of all returns, vouchers, and reports on authorized forms, and the immediate supervision of all clerks, stenographers, messengers, and such additional laborers as are employed in connection with the main office.

DIVISION OF SURVEYS.

(In charge of the chief surveyor.)

This comprises the preparation of general instructions and methods of work for field parties engaged upon authorized surveys and investigations; the organization, equipment, and prosecution of field work; the careful examination of final maps, designs, estimates and reports connected therewith, excepting the special investigations assigned to experts, and the supervision of all assistant engineers and employees engaged on the works herein cited.

DIVISION OF CONSTRUCTION.

(In charge of the principal assistant engineer.)

This comprises the preparation of typical designs; the completion of final designs and specifications; the preliminary organization of constructing parties, including inspection and testing of materials, and the prosecution of such works, whether under contract or by day labor, and the supervision of all assistant engineers and employees as are engaged on the works herein cited, excepting such special

constructions as are assigned to experts, and also excepting such works as are under authorization and prosecution by provincial boards.

DIVISION OF DRAFTING.

(In charge of the chief draftsman.)

This includes the general work of mapping, computing, and designing, the indexing and filing of maps and field books, the reproduction of maps, the collection of all available data on provincial boundaries and subdivisions, and the supervision of draftsmen and computers on the work herein cited.

DIVISION OF PROVINCIAL SUPERVISORS.

(In charge of the chief of supervisors.)

This comprises the general supervision of all supervisors, in so far as relates to the construction of roads and bridges and other engineering works authorized by provincial boards, the receiving, checking, and tabulation of reports, inspection, examination of designs and contracts, the issuing of typical designs and general instructions to provincial supervisors, and the compilation of data and laws relating to roads, navigable waters, and public works.

DIVISION OF RAILROADS.

(In charge of the railroad engineer.)

This comprises the examination of all points required by the provisions of the franchise under which railroads are now constructing, of all proposals for franchises submitted through the commission, of immediate supervision of railroad surveys and investigations authorized by the Commission, and of the compilation bearing upon the general subjects of location, construction, operation, and revenues, etc.

Existing conditions demand the creation of two other divisions in the near future—one a division of irrigation, to be in charge of an irrigation engineer, and the other a division of geography, to be in charge of a geographer.

The importance of irrigation in the agricultural development of the islands is large. The experimental farms are needing more or less development along this line. The estates included in the recent friar lands purchase have large irrigating systems. These lands will be subject to subdivision and sale in the near future; the repair and control of irrigating works will pass from one party to several. It is desirable that the government have general control of this subject. Conflicting private interests and requests for decision and for investigations have already arisen. A digest of existing laws, the formulation of practical laws controlling this subject, and the institution of an effective working system will require extended investigations. It is believed that provisions should be made for the establishment of this work in the near future.

Information as to the interior geography of the islands is deplorably deficient and inaccurate. The need of good maps is large for use in development and administration, and the lack is more evident than in the United States before national surveys were initiated. Sources of information are almost entirely lacking. Various surveys are in progress by the constabulary, by the military, by the forestry bureau, by the bureau of public lands, and by the bureau of engineering,

including work accomplished by the supervisors. No one bureau is compiling these various results, and doubtless much duplication of works exists. It would be of considerable advantage and also a matter of economy to compile data now available and to keep maps up to date.

Correct topographic maps will be of great assistance in the preliminary planning of engineering works, such as railways, highways, the improvement of waterways, irrigation, the development of water power and of water supply, in military operations both of the army and constabulary, in the administration of the government, for showing the extent of provinces and municipalities and the correct relation of towns, for the needs of the court of land registration, and for use in illustrating the resources of the islands, as public lands, forestry, agricultural products and minerals, as well as for other practical and scientific purposes. It is believed that it would be economy to establish the division of geography as outlined above, pending the prosecution of a comprehensive topographical survey of the islands.

The authorized personnel at the close of the fiscal year was a consulting engineer, 1 principal assistant engineer (J. G. Holcombe), 1 railroad engineer (C. H. Kendall, acting), 1 chief of supervisors (J. D. Fauntleroy), 1 chief surveyor (A. H. Higley), 1 geographer (vacant), 1 chief draftsman (F. P. Reynolds, acting), 7 assistant engineers, 18 transitmen (junior civil engineers), 1 chief clerk (F. R. Bonner), 7 clerks, 7 junior draftsmen (native), 10 surveymen (native), and 2 messengers (native), a total for the fiscal year ending June 30, 1904, of 69 employees, of whom 42 are technical and 27 nontechnical men, an increase over the previous year of 35 technical and 20 nontechnical employees. Additional to the above force, an indefinite number of temporary employees may be engaged, whose aggregate salaries during the year shall not exceed ₱12,000.

The 12 different roads being constructed from insular funds under the direction of this bureau require the services of 10 superintendents, of whom 5 are provincial supervisors; 64 foremen, including bridge carpenters and blacksmiths, 20 clerks, and about 7,000 native laborers.

EXPENDITURES.

The following tabulation shows the appropriations received for the operation of the bureau in accordance with the general appropriation acts Nos. 807, 1010, and 1049, total expenditures for the fiscal year, and the amount reverting to the treasury at the close thereof:

Money statement, Bureau of Engineering, fiscal year 1904.

[Philippine currency.]

Appropriations.	Contin- gent.	Transpor- tation.	Public works.	Salaries and wages.
Act 807, July 1, 1903.....	₱6,600.00	₱2,400.00	₱24,000.00	₱24,000.00
Act 1010, November 27, 1903.....				12,300.50
Act 1049, January 1, 1904.....	2,400.00	800.00	20,000.00	70,000.00
Total.....	9,000.00	3,200.00	44,000.00	106,300.50
Expenditures.....	8,865.89	2,701.16	36,439.05	104,838.19
Reverting to treasury.....	134.11	498.84	7,560.95	1,471.21
Total amount appropriated.....				₱162,500.40
Total amount expended.....				152,814.29
Total amount reverting to treasury.....				9,685.11

INCLOSURES.

The reports of the railroad engineer and the chief of supervisors, a map showing the principal provincial roads and trails, the roads under construction by the provisions of special acts of the Commission, and roads the survey of which have been authorized, all for the islands of Bohol, Cebu, Leyte, Luzon, Panay, Negros, and Samar, and 30 photographs accompany this report.

Respectfully submitted.

J. W. BEARDSLEY,

Consulting Engineer to the Commission.

MANILA, P. I., September 26, 1904.

REPORT OF THE DIVISION OF RAILROADS.

MANILA, P. I., September 24, 1904.

Mr. J. W. BEARDSLEY,

Consulting Engineer to the Commission, Manila, P. I.

SIR: I have the honor to submit the following report of the division of railroads, bureau of engineering, for the fiscal year ending June 30, 1904:

Acts Nos. 554, 555, dated December 8, 1902, and 703, dated March 27, 1903, were passed during the preceding year, granting authority for the construction of the Cabanatuan Extension, the Stotsenberg Branch and Bayambang Branch, and the Antipolo Extension, respectively. These acts are all similar, and of the nature of franchises. The Stotsenberg Branch was constructed and opened to the public the same year.

During the past fiscal year the location, plans, and profiles have been submitted in accordance with provisions of section 9 of the above-mentioned acts, to this office, and examined and approved for the other lines authorized, amounting to 117.56 kilometers, now either constructed or under construction. Nine inspection trips have been made for the examination of routes, right of way problems, crossings, etc., and the inspection of completed road-bed, structures, and equipment prior to the approval of the opening of the same. The opening to the public of two sections of the Cabanatuan Extension has been authorized. New and revised tariffs for the islands have been enacted, and rules and regulations governing the operations of all lines have been approved. Plans for a light tramway in Ambos Camarines under provisions of Act 1111 have been approved. Map projections of several lines throughout the islands have been made, and data acquired for the benefit of those interested in these projects, and with a view to further detailed study and field surveys in the near future. A survey has been authorized for the preliminary location of a line from Iloilo across the island of Panay to Capiz, and to a point on Bataan Bay. This survey is at present being prosecuted. The revised base tariffs and conditions of application are attached herewith as an appendix, with also a synopsis of the rules and regulations, approved to date.

Excepting the tramway provided for by Act No. 1111, all construction and operation is at present under the management of one company, the Manila and Dagupan Railway Company (Limited). A brief history of this road will be interesting here in connection with the statistics and workings of the same. A concession for the main line of this railroad, from Manila to Dagupan, was issued as a royal decree April 29, 1885. It was awarded to Mr. Edmund Sikes Hett, the only bidder, by royal order, January 21, 1887. Construction commenced in June, 1887, and was eventually completed May 20, 1894. The first company failed in August, 1890, and the present railway company purchased the road August 15.

The road was opened to public traffic as follows: First section, kilometer 0 to kilometer 43, March 21, 1891; second section, kilometer 43 to kilometer 87, February 22, 1892; third section, kilometer 87 to kilometer 120, June 1, 1892; fourth section, kilometer 120 to kilometer 196, November 23, 1892.

In November, 1896, the native insurrection against the Spanish Government broke out, and against the United States troops February 24, 1899. The railroad was under United States military control from November 21, 1899, until April 20, 1900, when it was returned to the present management. Since this latter date the road has not only regained the traffic it had previous to the disturbed conditions owing to the insurrection, but has entered upon a period of prosperous growth. The rates incorporated in the royal decree were in effect until April 20, 1900, an increase then being granted by military order. These rates operated until the inauguration of the revised tariff, January 1, 1904.

The following data is given of the main line and of its branches. The general statistics of the traffic and operations of this road, as indicated and compared graphically, shows its rapid rise, and it is interesting to note the prominent part third-class passenger traffic has in the revenues of the road. The total passenger earnings are double the freight earnings, and 95 per cent of this revenue is from the third-class passengers. The charts attached to this report show the traffic and the revenues for the ten years of its open service.

MAIN LINE, MANILA AND DAGUPAN RAILWAY.

The length of this line between termini is 196 kilometers; total length of tangent, 179.904 kilometers; maximum tangent, 11.468 kilometers; total length of curvature, 15.487 kilometers; maximum curvature, $4^{\circ} 22'$; average grade, 0.282 per cent; maximum grade, 0.8888 per cent; 155 masonry culverts, 0.5 to 2 meter spans; 184 bents, pile bridges, 4.8-meter spans; 177 steel bridges, 3 to 30 meter spans; 101 stations and buildings.

The gauge of main line and branches is 3 feet 6 inches. Forty-five-pound rails are used on main line, but 65-pound rails are required by the franchise previously quoted, and are being laid on the new lines. Six foot 8 by 5 inch Australian hard-wood ties, "jarrah," principally, are used throughout.

THE CABANATUAN EXTENSION.

The franchise was granted by Act 554, dated December 8, 1902, and was accepted February 5, 1903.

The termini of this extension are: Bigaa Junction (a distance of 27 kilometers from Manila), and Cabanatuan, province of Nueva Ecija (a distance of 91.5 kilometers).

The location plans and profiles were examined and approved in accordance with the provisions of said act, section 9, as follows: Kilometer 0 to kilometer 5, approved July 17, 1903; kilometer 5 to kilometer 20, July 31, 1903; kilometer 20 to kilometer 43, October 16, 1903; kilometer 43 to kilometer 58, April 5, 1904; kilometer 58 to kilometer 68, May 6, 1904; kilometer 68 to kilometer 78, May 24, 1904; kilometer 78 to kilometer 91.5, May 25, 1904.

Construction began July 11, sections of which were inspected and examined as follows: First section, kilometer 0 to kilometer 8 (Bigaa to Quingua), January 10, 1904; second section, kilometer 8 to kilometer 17.5 (Quingua to Baliuag), March 22, 1904.

Opening of completed portions was authorized as follows: First section, June 22, 1904; second section, March 28, 1904. Total length of tangent, 77.628 kilometers; maximum tangent, 8.714 kilometers; total length of curvature, 13.871 kilometers; maximum curvature, $5^{\circ} 49'$ for 420 meters, and 960 meters on $1^{\circ} 45'$; average grade, 0.379 and 0.600 per cent; maximum grade, 1.5 per cent for 660 meters, and 2,300 meters on 0.209 per cent; 22 masonry culverts, 0.5 to 1 meter spans; 266 bents, pile bridges, 4.8-meter spans; 41 steel bridges, 3 to 30 meter spans.

ANTIPOLO EXTENSION.

The franchise was granted March 27, 1903, and was accepted May 23, 1903.

The termini of this line are Manila and Antipolo, with a total length of about 40 kilometers.

The location plans and profiles were examined and approved, in accordance with the provisions of said act, section 9, as follows: Kilometer 0 to kilometer 5, approved October 22, 1903; kilometer 4½ to kilometer 9.1, November 9, 1903; kilometer 9.1 to kilometer 16.9 (Pasig station), March 30, 1904; kilometer 0 to kilometer 4.12 (Pasig to Marikina), March 30, 1904; kilometer 0 (equals 2.723 of above) to kilometer 4.64 (Rosario to Taytay), March 30, 1904; kilometer 0 to kilometer 0.423 (Ramal to Rio Pasig), March 30, 1904.

The plans and profiles from Marikina to Antipolo have not been submitted to date.

Construction began November 16, 1903, and is still in progress.

Total length of tangent, 20.685 kilometers; maximum tangent, 4.086 kilometers; total length of curvature, 5.434 kilometers; maximum curvature, $8^{\circ} 44'$ for 184 meters and 553 meters on $5^{\circ} 49'$; average grade, 0.340 and 1.391 per cent; maximum grade, 2 per cent for 300 meters, and 1,900 meters on 0.5 per cent; 13 masonry culverts, 0.5 to 1.5 meter spans; 50 bents, pile bridges, 4.8-meter spans; 32 steel bridges, 3 to 20 meter spans.

STOTSBERG BRANCH.

(Province of Pampanga.)

The franchise was granted by Act 555, dated December 8, 1902, and accepted February 5, 1903.

The termini are Dau (83 kilometers from Manila) and the military post at Stotsenberg, a distance of about 8 kilometers.

Construction began January 19, 1903, and the line was opened to military traffic March 18, 1903, and to the public on May 15, 1903. Inspection trips were made March 7 and

The following data is given of the main line and of its branches. The general statistics of the traffic and operations of this road, as indicated and compared graphically, shows its rapid rise, and it is interesting to note the prominent part third-class passenger traffic has in the revenues of the road. The total passenger earnings are double the freight earnings, and 95 per cent of this revenue is from the third-class passengers. The charts attached to this report show the traffic and the revenues for the ten years of its open service.

MAIN LINE, MANILA AND DAGUPAN RAILWAY.

The length of this line between termini is 196 kilometers; total length of tangent, 179.904 kilometers; maximum tangent, 11.468 kilometers; total length of curvature, 15.487 kilometers; maximum curvature, $4^{\circ} 22'$; average grade, 0.282 per cent; maximum grade, 0.8888 per cent; 155 masonry culverts, 0.5 to 2 meter spans; 184 bents, pile bridges, 4.8-meter spans; 177 steel bridges, 3 to 30 meter spans; 101 stations and buildings.

The gauge of main line and branches is 3 feet 6 inches. Forty-five-pound rails are used on main line, but 65-pound rails are required by the franchise previously quoted, and are being laid on the new lines. Six foot 8 by 5 inch Australian hard-wood ties, "jarrah," principally, are used throughout.

THE CABANATUAN EXTENSION.

The franchise was granted by Act 554, dated December 8, 1902, and was accepted February 5, 1903.

The termini of this extension are: Bigaa Junction (a distance of 27 kilometers from Manila), and Cabanatuan, province of Nueva Ecija (a distance of 91.5 kilometers).

The location plans and profiles were examined and approved in accordance with the provisions of said act, section 9, as follows: Kilometer 0 to kilometer 5, approved July 17, 1903; kilometer 5 to kilometer 20, July 31, 1903; kilometer 20 to kilometer 43, October 16, 1903; kilometer 43 to kilometer 58, April 5, 1904; kilometer 58 to kilometer 68, May 6, 1904; kilometer 68 to kilometer 78, May 24, 1904; kilometer 78 to kilometer 91.5, May 25, 1904.

Construction began July 11, sections of which were inspected and examined as follows: First section, kilometer 0 to kilometer 8 (Bigaa to Quingua), January 10, 1904; second section, kilometer 8 to kilometer 17.5 (Quingua to Baliuag), March 22, 1904.

Opening of completed portions was authorized as follows: First section, June 22, 1904; second section, March 28, 1904. Total length of tangent, 77.628 kilometers; maximum tangent, 8.714 kilometers; total length of curvature, 13.871 kilometers; maximum curvature, $5^{\circ} 49'$ for 420 meters, and 960 meters on $1^{\circ} 45'$; average grade, 0.379 and 0.600 per cent; maximum grade, 1.5 per cent for 660 meters, and 2.300 meters on 0.209 per cent; 22 masonry culverts, 0.5 to 1 meter spans; 266 bents, pile bridges, 4.8-meter spans; 41 steel bridges, 3 to 30 meter spans.

ANTIPOLO EXTENSION.

The franchise was granted March 27, 1903, and was accepted May 23, 1903.

The termini of this line are Manila and Antipolo, with a total length of about 40 kilometers.

The location plans and profiles were examined and approved, in accordance with the provisions of said act, section 9, as follows: Kilometer 0 to kilometer 5, approved October 22, 1903; kilometer 4½ to kilometer 9.1, November 9, 1903; kilometer 9.1 to kilometer 16.9 (Pasig station), March 30, 1904; kilometer 0 to kilometer 4.12 (Pasig to Mariquina), March 30, 1904; kilometer 0 (equals 2.723 of above) to kilometer 4.64 (Rosario to Taytay), March 30, 1904; kilometer 0 to kilometer 0.423 (Ramal to Rio Pasig), March 30, 1904.

The plans and profiles from Mariquina to Antipolo have not been submitted to date.

Construction began November 16, 1903, and is still in progress.

Total length of tangent, 20.685 kilometers; maximum tangent, 4.086 kilometers; total length of curvature, 5.434 kilometers; maximum curvature, $8^{\circ} 44'$ for 184 meters and 553 meters on $5^{\circ} 49'$; average grade, 0.340 and 1.391 per cent; maximum grade, 2 per cent for 300 meters, and 1.900 meters on 0.5 per cent; 13 masonry culverts, 0.5 to 1.5 meter spans; 50 bents, pile bridges, 4.8-meter spans; 32 steel bridges, 3 to 20 meter spans.

STOTSBERG BRANCH.

(Province of Pampanga.)

The franchise was granted by Act 555, dated December 8, 1902, and accepted February 5, 1903.

The termini are Dau (83 kilometers from Manila) and the military post at Stotsberg, a distance of about 8 kilometers.

Construction began January 19, 1903, and the line was opened to military traffic March 18, 1903, and to the public on May 15, 1903. Inspection trips were made March 7 and

August 19, 1903, and the final completion September 3, 1903. This is operated for the convenience and benefit of the military post at Camp Stotsenberg.

Total length of tangent, 5.906 kilometers; maximum tangent, 1.870 kilometers; total length of curvature, 1.154 kilometers; maximum curvature, $8^{\circ} 44'$ for 335 meters, and 369 meters on $7^{\circ} 57'$; average grade, 1.429 per cent; maximum grade, 1.806 per cent for 1,440 meters, and 1,900 meters on 1.526 per cent.

BAYAMBANG BRANCH.

This branch was authorized by Act 555, dated December 8, 1902, with termini at Bayambang station (about 164 kilometers from Manila) and the military post at Camp Greig, with length of about 3 kilometers. It has not yet been constructed.

The accounts and statistics of the company are rendered by calendar years, therefore no attempt has been made to change such reports to fiscal years.

The following is a statement of the traffic of the company lines for the year 1903 (Philippine currency): Total revenues, ₱1,587,854.92, being an increase over 1902 of ₱349,619.87; working expenses, ₱693,007.13, being an increase over 1902 of ₱168,162.96 (included in the working expenses, taxes were not included in the working expenses of 1902; for taxes, ₱49,769.51; for duties, ₱13,207.66); percentage of working expenses to gross receipts, 43.64; total passenger revenue, ₱1,048,049.93; revenue per passenger traffic per kilometer, ₱2.82; passenger revenue per kilometer of road, ₱5,866.22; total freight revenue, ₱387,185.39; revenue per freight train per kilometer, ₱2.08; freight earnings per kilometer of road, ₱2,165.98; average haul per passenger, 33.26 kilometers; average haul per ton of freight, 94.52 kilometers.

The equipment consists of 32 engines, 101 coaches (various), 547 freight cars and wagons (various).

The number of accidents during 1903 were 4 of Class A (serious), 4 of Class B (not serious), and 91 of Class C (minor).

The revenue from traffic for the first half of 1904, from January 1 to June 30, 1904, over the main line, has been as follows:

Passengers.....	₱474,817.37
Express freight.....	41,675.95
Ordinary freight.....	264,469.73
Military transport.....	52,672.70
Others.....	97,027.24
Stotsenberg Branch (total).....	10,397.65
Cabanatuan Extension, first two sections.....	20,070.93

Total.....	961,131.57
------------	------------

The following diagrams attached to this report show graphically the business of the road, and a few photographs are added showing some of the construction features of the line:

Diagram No. 1.—Gross receipts, expenditures, and surplus, 1893-1903, inclusive.

Diagram No. 2.—Comparative train earnings from passenger, freight, and military transportation for 1901, 1902, 1903, and six months of 1904.

Diagram No. 3.—Comparative train earnings by months, 1897-1903.

Diagram No. 4.—Comparative diagram of classified passenger traffic, 1893-1903, inclusive.

Diagram No. 5.—Comparative diagram of classified freight tonnage, 1893-1903, inclusive.

Diagram No. 6.—Comparative diagram of classified train kilometerage, 1893-1903, inclusive.

Accompanying this report is a map showing the lines operated, under construction, and projected on the island of Luzon, and a map of the projected route now being surveyed across island of Panay.

The route from Manila to Batangas and Lucena (about 110 miles), with a branch to Santa Cruz from Calamba and an extension from Lucena to Antimonan on the Pacific coast, passes through large market centers and a very populous, wealthy, and productive country. This will pay from the beginning of operation, and presents no serious engineering difficulties in construction. It is a much-needed system and is one particularly inviting to capital.

The railway system for the great hemp and copra country of Ambos Camarines and Albay, from Pasacao to Nueva Caceres and Legaspi, with extensions to Tobaco and to Laganoy Gulf (about 150 miles of line), is next in importance and could be easily constructed. These two systems should be connected, thus giving an all-rail route to Manila from Albay (about 275 miles), enabling a trip to be made in ten hours with good service. It now requires three days to make the trip by a long water route and a much longer period by land transportation.

The route from Iloilo to Capiz might be mentioned as second to the above lines in ease of construction and as a profitable investment, aside from the great benefit to the island.

The route from Dagupan up the west coast of Luzon to Ilong and Claveria (about 200 miles) is through a rich and thickly populated agricultural district, with a large tributary traffic in sight. The large amount of bridging along this line will make it a more expensive one than those previously mentioned.

A continuation of the Cabanatuan Extension northward to Aparri (about 275 miles) passes through the vast timber and mineral section of the central north and down the Cagayan Valley, famous for its tobacco, rice, and corn. This route presents some expensive features in construction, but its importance to the island as a civilizing factor in developing this great territory and opening up direct communication with the tobacco valley warrants government support in its construction, if necessary.

Another route needed is from Antipolo east to the Pacific coast (about 35 miles), or an extension of the proposed line to Santa Cruz eastward to the coast.

To the south of Luzon coastal roads are practicable throughout the length of the larger islands. The present development and existing traffic make these routes desirable, particularly on the islands of Cebu, Negros, and Leyte.

One of the most important and perplexing engineering questions relative to the extension of insular railroads is that of a uniform gauge. A continuity of railroad systems and uniformity of gauge are essential and necessary for commercial interests. The experiences of all countries using two or more gauges, and the opinions of all railroad men, condemn the use of various gauges in the same system or connecting systems of roads.

The gauge to be adopted should be one suited to the present and to the future class and volume of the traffic, likely to be conveyed thereon, and one that will adequately meet the public demand regarding speed and accommodation with the greatest efficiency and economy. Each country has physical features, products, and traffic conditions peculiar to itself, and these have to be studied and comprehended by railroad men in ascertaining the gauge and standards that will give the best service and returns for the money invested.

In the United States, Canada, England, and in most countries of Europe, Russia and Spain excepted, the standard track gauge is 4 feet 8½ inches, which is fast becoming the standard of the commercial world. But in the oriental countries we find the narrow-gauge not only popular, but admirably suited to the existing conditions, and in many instances to the exclusion of all others.

Data concerning the gauges used in the more important oriental countries, and the opinions of representative railroad men, follows:

South Africa has about 6,000 miles of 3 feet 6 inches gauge and finds it sufficient for its needs, notwithstanding its large volume of mining traffic. The first railroad built there was 4 feet 8½ inches gauge, and was afterwards changed to the narrow-gauge. Egypt has about 1,400 miles of 4 feet 8½ inches gauge and 200 miles of narrow-gauge. Last year about 60 miles of the narrow-gauge was changed to the standard.

In India the English Government has a very complete and well-controlled system that has created and developed the enormous traffic of that country. Three gauges are in vogue. There are 14,346 miles of 5 feet 6 inches gauge; 11,246 miles of meter gauge (3 feet 3½ inches), and 968 miles of 2 feet 6 inches gauge. In addition, 566 miles of road was under construction the past year, and 1,107 miles of new lines sanctioned, about equally divided between the broad and the narrow-gauge. Mr. C. F. Street, a prominent engineer, after inspecting this extensive system, says:

"The 5 feet 6-inches gauge was the first introduced, but it was soon found that many roads could not be made to pay operating expenses, and it was decided to use the meter gauge in building some new roads and also to change the gauge of some of that built 5 feet 6 inches, in order to lessen the expense of operation. The South India road is a notable example of the latter, as it was originally 40 to 50 miles long and with a 5 feet 6 inches gauge, and did not pay expenses in the hands of a private company. The India Government agreed to guarantee interest on the bonds of this road if the gauge was changed to one meter and the line extended. This was done, and at the present time the road is doing a large business, and it is found that the meter is too narrow to carry it economically. This has occurred in one or two other places in India, and in some places they have the meter gauge where they should have the 5 feet 6 inches, and in other places they have the 5 feet 6 inches and should have the meter, and I think the general opinion is that it was a great mistake that the 4 feet 8½ inches gauge was not originally adopted."

The small but important island of Ceylon has 331 miles of 5 feet 6 inches gauge and 36 miles of meter gauge. Java is an island about 800 miles long and 200 miles wide, with a population of 23,000,000. It has some 1,500 miles of government (Dutch) railroads of 3 feet 6 inches gauge and only 30 miles of 4 feet 8½ inches gauge.

The Siberian Railway and the Chinese Eastern are of 5-foot gauge. The Korean Railway, the Imperial railways of northern China, and the new Canton-Hankow Line are 4 feet 8½ inches gauge. Of the 3,000 miles of railways in Japan, the gauge is universally 3 feet

6 inches, 500 miles being Government lines. All the railways of Central America and nearly all the lines of the countries of South America are narrow-gauge, the 3 feet 6 inches and meter gauges predominating. The Hawaiian Islands have the 3-foot gauge.

In the Australian countries, the "warfare of gauges" has been waged for years, and in 1902 the government adopted the 3 feet 6 inches for the new Transcontinental Railway. Following is the mileage and gauges of these countries in operation in 1903 and the opinions of the various representatives of these lines:

Country.	Mileage.	Gauge.
Queensland.....	2,711	<i>Ft. in.</i> 3 6
New South Wales.....	3,138	4 8½
Victoria.....	3,335	5 3
South Australia.....	1,229	3 6
Western Australia.....	507	5 3
New Zealand.....	1,720	3 6
Tasmania.....	2,201	3 6
	500	3 6

Mr. A. C. Pendleton, railways commissioner, Adelaide, South Australia, says:

"The 3 feet 6 inches gauge was adopted by this Government for the proposed Transcontinental Railway because a great portion of our northern railway system is already on the 3 feet 6 inches gauge, which also is the gauge in the State of Queensland, adjoining the northeastern part of South Australia.

"The railway system in the southern parts of South Australia is on the 5 feet 3 inches gauge, as is also the whole of the railway system in Victoria; while in New South Wales only there exists at present a 4 feet 8½ inches gauge."

Mr. Henry C. Stanley, chief engineer, Queensland railways, says:

"Our standard gauge and the only one in use on the government lines is 3 feet 6 inches. Economy of first cost in view of having to surmount a coastal range involving heavy works was what decided the authorities originally to fix our gauge at 3 feet 6 inches."

Mr. H. McLachlan, secretary railway commission, New South Wales, says:

"The gauge throughout New South Wales on the State railways is 4 feet 8½ inches, and the commissioners strongly support the adoption of that gauge throughout Australia. This gauge was adopted in the first instance when railways were established here forty-four years ago, and it was deemed by the authorities then in power to be the most suitable gauge for a modern railway."

Mr. F. Rennick, engineer in chief railways construction branch of the board of land and works, Victoria, says:

"Profiting by the experience of America, the best general gauge is, in my opinion, the world's standard, 4 feet 8½ inches, and where the mileage of 3 feet 6 inches yet constructed in any country is small compared with the mileage which may be required, the conversion of this to the standard gauge might be advisable, not otherwise. The 3 feet 6 inches is a good gauge, and experience shows that a large traffic and fair speed—up to 60 miles as a maximum—may be reached, as engines up to 45 or 60 tons (exclusive of tender) may be used. The saving in cost of construction compared with 4 feet 8½ inches is, however, trifling, American experience showing that the curves may be as sharp on the 4 feet 8½ inches as on the 3 feet 6 inches."

Mr. A. B. Moncrieff, engineer in chief South Australian railways, South Australia, says:

"The 5 feet 3 inches gauge was introduced into this province about forty-three years ago, because of the report of the Irish commission about that time, and further because there was an understanding that 5 feet 3 inches was to be the ruling gauge for Australia. After some years it was found that the 5 feet 3 inches gauge was unsuitable for developing the sparsely populated districts, and from an economical standpoint the narrow-gauge was adopted and has proved satisfactory for the work it was intended to do. The whole trade from Broken Hill to the seaboard is now conducted over a railway of this gauge on a single line, bringing at least twelve trains each way every day, the passing places being on an average 9 miles apart. In my opinion, the 3 feet 6 inches gauge train is admirably suited for developing country dealing with farm produce, sheep, cattle, and minerals."

Mr. T. Ronayne general manager, New Zealand government railways, New Zealand, says:

"When the general government undertook the construction of railways, a uniform gauge of 3 feet 6 inches was adopted, and the short lines which had been constructed to the wider gauge were altered. The reason for adopting the narrower gauge was a financial one. On portions of the line where grades and alignment are good our trains frequently reach a speed of 45 miles per hour, and our principal mixed trains have a time-table speed of from 17 to 20 miles per hour. With a well-maintained line of 3 feet 6 inches gauge, and with

curves of large radius, I see no reason why speeds of from 30 to 45 miles per hour should not be generally run. At the present time there is an agitation in this colony to adopt for the more sparsely settled districts, a still narrower gauge, viz, one of 2 feet or 2 feet 6 inches, but there are great objections to this proposal on account of the difficulties in working, incidental on break of gauge. With the grade of 3 feet 6 inches, and a minimum curve of 12 chains radius and a grade of 1 in 75, and a 65 or 70 pound steel rail, well-sleepered, an efficient line can be constructed capable of carrying a very large traffic; and, where necessary, at considerable speeds."

Mr. F. Back, general manager Tasmanian railways, Tasmania, says:

"The first line built in the colony was 5 feet 3 inches gauge, but it was found that the traffic was so limited that a cheaper class of line would be sufficient. The 3 feet 6 inches gauge was therefore finally adopted as being more economical and quite equal to the requirements of the colony. The limits of grades is 1 in 40 with curves of 5 chains radius. Our passenger trains are able to maintain a speed of 30 miles an hour, although our ordinary trains are timed to a much lower speed."

At a recent biennial conference of the British Institute of Engineers, all the speakers were unanimous in advocating the standard gauge for all light railway construction, and contended that there was no material advantage or important saving in adopting a narrower gauge. American engineers confidently agree to construct as economically, lines with the standard gauge as are being constructed with the narrower gauge, thereby giving employment to American railroad men and to standard methods, materials and equipment.

Respectfully submitted.

CHAS. H. KENDALL,
Acting Railroad Engineer.

MANILA AND DAGUPAN RAILWAY.

PART FIRST—BASE TARIFFS.

CHAPTER I.—*General conditions for the application of tariffs.*

ARTICLE 1. In no case and under no pretext whatever shall higher prices be charged than those specified in the maximum tariffs.

ART. 2. The company may at any time establish lower tariffs than the maximum rates, provided the conditions of this order are complied with.

ART. 3. All discrimination in favor of any person, company, locality, industry, as also the imposition of any unjust prejudice or inconvenience to any person, company, locality, industry, or merchandise, are hereby prohibited.

ART. 4. In exceptional and extraordinary cases the consulting engineer, with the approval of the secretary of commerce and police, shall have power to authorize in writing, specially in each case, temporary exceptions to the general conditions of the application of rates.

ART. 5. The general as well as the special conditions established in particular cases which imply a reduction of the tariffs must be of such a nature that they may be generally accessible to all under equal conditions.

ART. 6. The company shall not in any case charge rates which have not been announced to the public ten days previous to their adoption.

ART. 7. The copies in Spanish and English of rates approved by governmental authority for the transportation of passengers, baggage, packages, freight, and live stock shall be posted by the company in prominent places in each of its stations ten days before such rates shall go into effect and they shall also be published in Spanish and English newspapers, respectively, of general circulation for three consecutive days ten days before the same shall go into effect.

ART. 8. The company may refuse to transport any package or parcel containing goods of a dangerous nature or the transportation of which shall be prohibited by the government.

ART. 9. Reduced rates for the transportation of merchandise shall not be raised for sixty days after having been put in force, except when authorized by proper authority.

ART. 10. The company shall be entitled to issue commutation tickets, return tickets, and excursion tickets between stations at reduced prices.

ART. 11. The company shall not grant free tickets or reduced rates nor transport passengers at prices or conditions different from those contained herein.

ART. 12. The company may grant free transportation or reduced rates to objects and merchandise destined to or proceeding from fairs, expositions, exhibitions, and in other similar cases.

ART. 13. The company may grant free transportation or reduced rates to all persons without means, shelter, or homes; to grant free transportation or reduced rates also for charitable objects or in cases of floods or other public calamities.

HAULED, MANILA AND DAGUPAN RAILWAY,
MANILA.

DIAGRAM SHOWING KILOMETERS RUN, MANILA AND DAGUPAN RAILWAY, MANILA.

ART. 14. The company may transport free of charge or at reduced rates their own employees and officers or the employees and officers of other roads.

ART. 15. Free tickets shall be issued only by the president or by the general manager. The general superintendents of different departments may pass their immediate employees when in discharge of their duties.

ART. 16. All goods, live stock, and other objects not specified in the tariff shall be considered, for the collection of freight, as belonging to the class which they most resemble.

ART. 17. The rates given in the tariff are not applicable to any object weighing more than 1,500 kilograms or which exceeds the dimensions of the rolling stock.

ART. 18. Fragile or brittle articles, unprotected, improperly packed, or perishable, will not be received for conveyance unless accompanied by an "owner's risk" note, which shall relieve the company from all responsibility except damage arising from its negligence.

ART. 19. The price for the transportation of any merchandise shall not be less than 35 cents if by passenger train and 25 cents if by a freight.

ART. 20. In the event of goods and effects transported by the company remaining in the stations more than the time necessary for their removal as prescribed herein the company is authorized to charge for storing the same as per tariff.

ART. 21. The company is authorized to make application before the justice of the peace of the district wherein the station is situated for the sale at public auction of all articles of freight or baggage delivered to or transported by the company which may have remained at such station for two months or over and not been called for by the owner or consignee. In the beforementioned cases, or when the owner or consignee can not be found or is unknown, or shall refuse to receive the goods transported or pay the cost of transport, application may be made by the company to the justice of the peace for an order to sell at public auction within two days those goods which are of a perishable nature and within ten days those not subject to deterioration. The proceeds of sale shall go first to defray the cost and expenses of said sale, and then to the account of freight and charges of the railroad company on said goods, and the balance, if there be any, shall be deposited with said judge at the disposition of the person who may have right to the same.

ART. 22. The company may refuse, unless freight be prepaid, to transport empties, perishable goods, and goods whose small value would be insufficient to cover freight on same.

ART. 23. In the case of refusal, neglect, or delay in payment of the cost and expenses of transportation and conduction of freight over the whole length or any part of the line, the company shall have the right to detain the same until such time as amount due shall be paid. If the payment of rates or transportation on goods should not be effected within fifteen days, the company may apply for their sale at public auction to the justice of the peace for the district wherein the station is situated, who may order the total or partial sale of said goods in sufficient amount to cover expenses, costs, and transportation charges.

ART. 24. For the delivery of goods, live stock, and any other freight at destination the consignee should present the receipt given by the company on shipment; failing this the goods, live stock, or other freight will only be delivered by the company on proof of ownership or identity.

ART. 25. Perishable goods, ice, fresh fish, oysters and other shell fish, butter, milk, eggs, bread, poultry, fresh meat, game, and all other eatables of a perishable nature will only be transported prepaid, and if not received by the consignee within a reasonable time, shall be sold by the company or destroyed, proceeds of sale to be applied as per article 21.

ART. 26. The company will not be responsible for loss of or damage to any articles unless the same be signed for as received by duly authorized clerks or agents, and every consignment of goods when delivered for transmission by railway must be accompanied by a consignment note, signed by the sender or some authorized person on his behalf, as a guaranty of the correctness of the information furnished therein. The consignee shall be liable for any false description. The goods must be well and securely packed and plainly and legibly marked or addressed with the name and address of the consignee and the name of the railway station to which they are to be dispatched.

ART. 27. Shortages or damages to goods, live stock, or other freight must be reported to the station agent before the goods, live stock, or other freight have been accepted by the consignee. The consignee accepting same without acknowledgment of complaint in writing by station agent relieves the company from all responsibility for shortages or damages.

ART. 28. Consignments of watches, jewelry, precious stones, gold or silver coin or bullion, bills, bank notes, securities, stamps, and title deeds shall not be accepted for conveyance by freight trains, but must be forwarded by passenger trains, and will be charged for at tariff for money and valuables.

ART. 29. The company or its agents may refuse to receive for shipment any goods undescribed or insufficiently described or addressed, and the right is reserved by the company and its agents to inspect all such goods before accepting the same for shipment; and for this purpose, if considered necessary, any package must be opened by the sender at his own expense.

ART. 30. The company shall be exempt from all responsibility for contents of packages under seal or in sealed cars if delivered in the same condition as received with seals intact.

ART. 31. Consignees can not refuse to receive perishable freight and live stock on non-working days.

ART. 32. The company will not be responsible for any loss or damage occurring to goods consisting of a variety of articles in the same package liable by breakage to damage each other or other articles, or damage arising from leakage due to bad vessels or bad cooerage or to fermentation.

ART. 33. The company is not bound to forward nonperishable goods from any station by the first or succeeding train; or to send a car from one station to another with less than 1 ton.

ART. 34. The company does not guarantee arrival or delivery of any goods or live stock (perishable or otherwise) at any particular time by any particular train or for any particular market.

ART. 35. Whenever "freight cars" are mentioned they shall, unless otherwise specified, be taken to mean four-wheel cars of 7-ton capacity, and whenever rates are quoted for goods in carload lots the minimum load shall, unless otherwise specified, be reckoned as for a four-wheel car of 7 tons capacity.

Bogie cars, series VB and JB, shall be taken as equal to two 4-wheel cars and three 4-wheel cars, respectively.

ART. 36. It shall be obligatory for the company, by means of its agents or employees, to affix checks or tags to every parcel of baggage delivered to such agents or employees for transportation, and a duplicate of such check or tag shall be given to the passenger delivering same. If the company does not comply with this obligation no fare or toll shall be received from such passenger, and if such passenger has already paid same it shall be returned on demand.

ART. 37. The company shall have a lien on all goods received and shipped for the payment of freight charges due on the same, and in the case of the failure by the owner or consignee to pay, the goods shall be sold in accordance with article 21.

ART. 38. A person who is injured by reason of being on the platform of a car, or on any baggage, wood, or freight car, in violation of the printed regulations in force at the time, and without the consent of the company or its employees, shall not claim damages for such injuries.

ART. 39. Only duly authorized employees shall be considered as legally representing the company in treating with the public and in effecting receipt and delivery of freight of all kinds.

Persons exclusively employed for manual or mechanical labor shall not be considered as legally representing the company with the public in the receipt or delivery of freight of any kind.

ART. 40. Any person or corporation who makes a contract for transportation, passenger or freight, with the company, shall be understood to accept and be bound by the rules and conditions established herein, and in no case will alleged ignorance or inobservance of the said rules and conditions be admitted.

ART. 41. All damage, loss, or deterioration during transportation shall be on account and at risk of owner in fortuitous cases, or when caused by "force majeure" or when due to nature or faultiness inherent in the freight or merchandise carried.

PART SECOND—RATES.

UNITS.

ART. 42. All rates shall be made in Philippine currency, and payments shall be made in such currency, or in that of the United States at the rate of two for one.

Fractions of a cent, one-half or greater than one-half, shall be charged as 1 cent, but if less than one-half shall not be charged.

The unit of distance shall be the kilometer, and any fraction thereof shall be considered as 1 kilometer.

The unit of volume shall be the cubic meter.

The unit of weight shall be the kilogram, and the ton shall consist of 1,000 kilograms or 2 cubic meters for merchandise marked T. M. (ton measurement) in the approved classification.

STANDARD TIME.

ART. 43. Manila observatory time shall be the standard by which all the clocks on the line shall be regulated.

CHAPTER I.—*Passengers.*

ART. 44. Rates for adult passengers shall be, per kilometer:

	First class.	Second class.	Third class.
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
From 1 to 50 kilometers, inclusive.....	5.60	3.80	2.00
From 51 to 120 kilometers, inclusive.....	4.60	3.40	1.80
From 121 kilometers upward.....	4.20	2.80	1.60

ART. 45. Children under 3 years of age who do not occupy a seat are not required to pay. Children from 3 to 9 shall pay one-half the rate paid by adults, and two children over 3 and under 9 shall be entitled to one seat.

ART. 46. Passengers shall obtain their tickets before entering the train.

ART. 47. On each ticket shall be printed the names of starting station and destination, class of coach to which it corresponds, number, price, date, and number of train, said ticket being only valid for the train, date, and destination stated.

ART. 48. The sale of tickets shall commence at least half an hour before the train starts, and the ticket offices shall be closed two minutes before train is dispatched.

ART. 49. Passengers shall show their tickets when requested to do so by the proper employees of the company and should keep same until arrival at destination, there to be handed to ticket collector.

ART. 50. Passengers found traveling without tickets shall be required to pay the regular fare, with an overcharge of 20 cents.

ART. 51. Passengers found traveling in a coach of a class higher than that specified on ticket shall be required to pay the difference in fare between the two classes with an overcharge of 20 cents, unless advice shall have been previously given to the station agent or ticket revisor that they desire to travel in another and superior class; in which case, provided there is accommodation on the train, only the difference in fare shall be collected by the ticket revisor, who will issue a supplementary ticket to be given up at end of journey.

ART. 52. Any passenger traveling beyond destination marked on ticket will only pay the excess corresponding to the increased distance traveled when the ticket revisor shall have been duly informed of such intention before train leaves the station to which ticket is valid. If such required information is not given, the excess fare shall be collected with an overcharge of 20 cents.

ART. 53. Passengers are not allowed to take dogs or any other pet animals or birds in the coaches.

ART. 54. Intoxicated persons, or persons carrying loaded firearms or packages which, by reason of their contents, shape, size, or odor would constitute a danger or annoyance to other passengers, shall not be permitted to enter the coaches.

ART. 55. Passengers have the right to demand that the employees of the company shall eject from the coaches all persons who, by bad conduct, bad language, or actions, offend them, or who cause disturbances or discomfort.

ART. 56. Every passenger who refuses to pay his fare may, by the conductor of the train and employees of the company, be put out of the train with his baggage at the next station, the conductor first stopping the train and using no unnecessary force.

ART. 57. It is strictly prohibited:

First. To enter or leave the coaches by any other way than through the doors.

Second. To change from one coach to another or lean out of same whilst the train is in motion.

Third. To enter or leave the coaches, not being in a station.

Fourth. To get on or off the coaches when the train is in motion.

ART. 58. Passengers on purchasing tickets must ascertain that tickets given are as requested and that change given is correct before leaving ticket window. No claim made by passengers after leaving the window for sale of tickets will be allowed.

ART. 59. Should a passenger from any cause desist from the trip before the departure of the train, the company shall reimburse the amount of ticket to its owner at the same window or office at which it was sold. After the departure of the train the company will reimburse the holder of the ticket only at the office of the general manager upon presentation, with the least possible delay of sufficient proof of the validity of the claim.

ART. 60. Passengers desiring to occupy a separate compartment should request same from station master one hour before the train leaves, and pay for all the seats of said compartment at tariff prices. This circumstance does not permit a greater number of passengers to travel in said compartment than the regulation number of seats.

ART. 61. Spitting in any car of the company is strictly prohibited.

CHAPTER II.—*Baggage.*

ART. 62. Rates per 100 kilograms and per kilometer: From 1 to 50 kilometers, inclusive, 4 cents; 51 to 120 kilometers, inclusive, 1.60 cents; 121 kilometers upward, 1 cent.

ART. 63. No distance will be considered of less than 20 kilometers. No fraction will be considered of less than 10 kilograms. No charge less than 35 cents shall be made.

ART. 64. Passengers holding full tickets shall be entitled to the free transportation of 50 kilograms or less of personal baggage for first-class passengers and 30 kilograms or less for other passengers; children holding half tickets shall be entitled to one-half the weights granted to adults.

ART. 65. The rates for baggage shall be applied to the excess weight over the herein mentioned 50 and 30 kilograms.

ART. 66. The receipt of baggage will commence not later than one-half hour before the train's departure.

ART. 67. All baggage must, to admit of it being checked, be presented at stations at least five minutes before the departure of the train by which it is required to forward same.

ART. 68. By personal baggage is to be understood ordinary wearing apparel, bicycles, and such articles as may be required by persons practicing any profession or trade, it being further understood that such articles shall only be accepted by the company when contained in such receptacles as will safely contain the same for purposes of transportation.

ART. 69. The company shall not be liable beyond the extent of \$200 Philippine currency for each 50 kilograms of weight of such baggage unless the owner thereof shall, upon offering the same for transportation, declare the contents thereof and pay therefor by way of insurance one-eighth of 1 per cent extra on such declared value for the additional amount of responsibility to be assumed by the company in case of loss.

ART. 70. Passengers may carry with them in the coaches handbags, packages, and parcels, which, by their size, weight, appearance, or other conditions, offer no inconvenience to other passengers or reduce the seating capacity of the car.

ART. 71. Baggage shall be carried on the same train as the owners thereof, and shall be delivered to such owners upon arrival of the train or at the latest one-half hour afterwards.

ART. 72. Baggage not received within twenty-four hours after arrival, and packages and articles left by passengers at parcels office, will be stored by the company, to be delivered to the owners when called for and a charge of 10 cents per day for each piece or package shall be made, the day on which the package or article is left counting as one day. All baggage not claimed or delivered within three months shall be sold in the same manner as merchandise as provided by article 21.

ART. 73. Baggage will only be checked on presentation of a ticket and on the payment of any excess, the passenger receiving a form on which shall be stated names of shipping and destination stations, the number of packages, the total weight, and the amount collected for excess, if there should be any. This form will enable the passenger by presenting the same at the destination to obtain possession of his baggage. The form must be taken up by the company at the time of delivery.

ART. 74. Passengers carrying in their baggage jewels, precious stones, bank notes, bullion, scrip, bonds of public debt, or other objects of value shall declare same at the time of checking, stating the value which they represent.

ART. 75. The receipt for baggage open or in a bad condition shall be noted "bad order", and the baggage shall be transported without liability by the company for losses resulting because of such bad condition.

ART. 76. The passenger who can not present his baggage check will only be allowed to take possession of his effects after ample proof of ownership. Such proof will consist of possession of keys and the precise indication of marks and appearance of packages and some of the contents contained in each one of same. With such proof the baggage will be delivered under receipt. Expenses incurred through these formalities will be for account of passenger.

ART. 77. If on arrival of the train some package, duly checked, should be missing, the passenger should demand the same from the station master, who, after reweighing those which have arrived and obtaining a description of those missing, will give the passenger in exchange for the receipt a paper specifying the description, marks, and approximate weight of same, this being the weight short of total given in way bill and receipt.

ART. 78. All claims for shortage or damage shall be made on delivery of baggage; any claims made afterwards will not be admitted.

CHAPTER III.—*Express.*

ART. 79. Articles of all kinds which are not personal baggage of passengers shipped on passenger trains shall be considered as express matter.

ART. 80. Rates per ton per kilometer: From 1 to 50 kilometers, inclusive, 34 cents; 51 to 120 kilometers, inclusive, 16 cents; 121 kilometers upward, 10 cents.

ART. 81. No distance will be considered of less than 20 kilometers. No fraction of weight will be considered of less than 10 kilograms. No charge of less than 35 cents shall be made.

ART. 82. A rebate of 25 per cent on the regular express rates shall be allowed on the following and similar articles which by nature require immediate transportation, but the same shall only be received as express prepaid matter: Beer, bread, butter, cheese, dogs, eggs, ice, fresh fish, fruits, game, milk, mineral waters, oysters, poultry, soda water, vegetables, and the like in lots of 25 kilograms or over. Poultry and dogs shall be shipped in coops or crates.

ART. 83. The company may refuse to accept poultry, dogs, and other birds and animals, unless contained in coops or crates.

ART. 84. The liability of the company in express shipments shall be limited to \$50 per hundred kilograms, unless the sender shall previously declare the value of such shipment and shall pay a risk rate of one-eighth of 1 per cent upon said declared increased valuation in addition to the express rates.

ART. 85. Express matter shall be booked at least one-half hour before departure of train by which it is to be shipped. If booked after this time, it will be forwarded by the next ordinary passenger train, and will be delivered to consignees one hour after arrival at destination.

ART. 86. To effect this class of transport the consignor shall present a delivery note or declaration in duplicate stating name and domicile of the company, names and residences of consignor and consignee, station of destination, weight, marks, and numbers.

ART. 87. Shipments will not be received for any place where there is no station.

ART. 88. When a consignor ships various packages directed to one consignee the express charges shall be calculated on total weight of same.

ART. 89. When the company receives sealed packets, it shall be exempt from all responsibility on delivering same in good order and with seals intact to consignee.

ART. 90. Shipments not removed from station of destination within twenty-four hours after notice of arrival has been given shall pay storage charges on same as per tariff.

ART. 91. The company will not receive for shipment any kind of perishable goods unless the express charges are prepaid.

ART. 92. The company will not be responsible in any way for natural deterioration of perishable goods in their transport.

ART. 93. The company will not be responsible for any loss of market.

ART. 94. The company will not be liable for any loss of or damage to or delay of express matter resulting from it not being properly protected by packing.

ART. 95. The company will not be liable for any indirect or consequential damages in respect of express matter lost, injured, or delayed.

ART. 96. Money shall pay at the following rates:

One-eighth per cent of the amount declared, and one-eighth of 1 cent per kilometer, for every \$100.

ART. 97. Minor silver and copper coins, and other valuables will pay at the above rate, in addition to the express rates.

ART. 98. Valuables of all kinds shall be placed in a strong covering tied and sealed, and provided that the company delivers the packages in the same condition they were received and with the seals unbroken, no responsibility shall attach to the company.

ART. 99. Articles 73, 77, and 78 are applicable to express transport.

CHAPTER IV.—*Funeral transport.*

ART. 100. Rate for funeral transport shall be, per car per kilometer, 40 cents.

ART. 101. No distance will be considered of less than 20 kilometers.

ART. 102. The company is not obliged to transport in each wagon more than one coffin.

ART. 103. Transport of funerals will only be effected by passenger train.

ART. 104. Corpses will not be received for conveyance unless a medical certificate be produced setting forth that death was not caused by any infectious or contagious disease.

ART. 105. Advice of a funeral transport should be given four hours beforehand in the principal and twenty-four hours in the intermediate stations, and the shipment should be booked two hours before the train is timed to leave.

ART. 106. Funerals must be taken away from arrival stations within two hours after arrival; this not being done the company will effect removal of same on account and at expense of the consignor.

ART. 107. Each coffin shall be placed in a closed car in which no other objects or freight may be loaded. When in consequence of the removal of family vaults more than one coffin is booked by the same person to same destination, the following rules will be observed:

First. Two or three coffins may be placed in one car, the freight being 30 cents per coffin per kilometer.

Second. In the event of there being more than three coffins, the freight will be 20 cents per coffin per kilometer, when same can be placed separately on the floor of car, one coffin not being allowed to rest on another.

ART. 108. Special trains for funeral transports will be charged for at special train rates as hereinafter provided, one funeral car being allowed in addition to train formation specified, any additional car will be charged extra at 40 cents per car per kilometer.

CHAPTER V.—*Special trains.*

ART. 109. Rate shall be, per train per kilometer, \$2.50.

ART. 110. Minimum charge shall be \$100.

ART. 111. Formation of a special train shall be one first-class coach, four-wheel type; one baggage van, four-wheel type; one brake van, four-wheel type.

ART. 112. If it should be necessary to increase the number of cars, all seats contained therein, if passenger coaches, shall be paid for as per tariff, or if freight cars, they shall be paid for as full carloads, as per tariff for goods by passenger trains.

ART. 113. Requests for special train shall be made, twelve hours in advance, to the station master of any station on the line.

ART. 114. The cost of a special train shall be graduated, as per this tariff, by the number of kilometers run on outward journey, the return of train being on account of the company. Payment for a special train gives the privilege of occupying the returning train within the following limits: For a run of 50 kilometers or under on outward journey six hours after arrival of train at destination; for a run of 51 kilometers upward, twelve hours after arrival. In each case the passenger shall declare, before starting, whether he intends to utilize the return of train.

ART. 115. The company will not be responsible for the length of time occupied in the journey of a special train, which shall be run as traffic arrangements will admit.

ART. 116. When a special train is applied for and application granted, payment for same shall be made at once.

CHAPTER VI.—*Merchandise.*

ART. 117.—Rates per ton per kilometer.

	First class.	Second class.	Third class.	Fourth class.
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
From 1 to 20 kilometers, inclusive.....	12.0	9.0	7.0	5.0
From 21 to 70 kilometers, inclusive.....	4.6	3.6	2.6	2.0
From 71 to 110 kilometers, inclusive.....	4.2	3.2	2.0	1.6
From 111 upward.....	3.8	2.8	1.6	1.2

ART. 118. Freight will be charged on all goods according to gross weight, except when marked in approved classification "ton measurement."

In such cases the weight will be calculated on the basis of one-half of a ton per cubic meter, and the cubic measurement will be that of a box or covering of usual form in which the article may be contained.

ART. 119. The base of all tariffs will be per ton of 1,000 kilograms, except for goods marked "ton measurement" in classification.

ART. 120. Lots shipped by full carload will be carried at 10 per cent reduction from the class rates.

ART. 121. All distances under 20 kilometers will be considered as 20 kilometers.

Any fraction of weight of less than 10 kilograms shall be considered as 10 kilograms.

Shipments less than 50 kilograms shall be considered as 50 kilograms.

The minimum freight charge shall be 25 cents.

ART. 122. Any package containing articles of more than one class will be charged for at the rate fixed for the highest classed article contained therein.

ART. 123. Articles not enumerated shall be given the class provided for similar articles.

ART. 124. The classification of merchandise shall be that contained in the official classification.

ART. 125. The shipment and delivery of merchandise at the stations shall be at least between the hours of 7 a. m. and 4 p. m.

ART. 126. Merchandise shall be shipped from the forwarding station in its order of receipt and within forty-eight hours.

ART. 127. Time allowed for delivery shall count from date and hour of leaving forwarding station.

ART. 128. Merchandise shall be placed at the disposal of the consignee at the receiving station on the day following its shipment from the forwarding station when the distance between such two stations is 100 kilometers or less. For every additional 100 kilometers or fraction of a hundred, one day more will be allowed for delivery.

ART. 129. At the time of placing the merchandise transported at the disposal of the consignee the company should notify him of arrival either by mail or by posting the same at the delivering stations, stating the particulars and details concerning each lot, said notice to remain for the inspection of the public for a period of at least three days.

ART. 130. Merchandise should be removed by the consignee on the day of arrival or the following day, and should such removal not be made within said term charge for storage shall be made according to tariff for each day over and above the time specified.

ART. 131. The company shall reweigh the merchandise whenever the shipper shall require it.

ART. 132. In case of loss or damage the company shall not be required to pay to the owners of the merchandise greater amounts per ton than the following: First class, \$200; second class, \$100; third class, \$50; fourth class, \$25. Should the value of the merchandise, however, be greater than the amount fixed by the maximum tariff as above, the shipper upon forwarding said merchandise may declare its value and pay a risk rate of one-eighth of 1 per cent upon increased valuation in addition to the freight charges, in which case the liability of the company shall be in proportion to the value so declared.

ART. 133. The company is not obliged to transport packages weighing more than 1,500 kilograms or which exceed the dimensions of the rolling stock.

If consenting to effect these transports, the rate shall be double the ordinary tariff as per classification with a minimum charge per car necessary for safe transport as for full capacity of each car at fourth-class rates.

ART. 134. When the company transports inflammable, explosive, materials, or goods of a dangerous nature, the rate shall be double second class and under following conditions:

(a) Gunpowder, fireworks, and other explosives will be carried entirely at the owner's risk. The nature of the goods must be made known by a conspicuously printed notice of contents on each package and upon the car carrying same.

The days appointed for receiving gunpowder and other dangerous and explosive compounds will be ascertained of station master before consignment is taken to the station.

(b) The company will not carry gunpowder and dangerous and explosive compounds by passenger trains.

All gunpowder and other explosives must be packed in barrels or well-made boxes, closely joined and hooped, or in copper, zinc, or tinned cases or canisters, and so secured that no part of the explosive can escape.

(c) Powder or other explosives will not be left at any place where there is not an officer in charge or consignee to receive same, and the consignment must be removed from the railway premises within six working hours after arrival.

ART. 135. Goods liable to mix with others of the same nature, such as sand, asphalt, sulphur, black lead, coal, coke, horns, gravel, chalk, bones, bricks, firewood, timber, minerals, potatoes, boards, salt, planks, tiles, earth, clinkers, etc., and goods liable to more or less damage others, such as manures of all kinds, lime, slaughter-house refuse, grease, whitening, etc., shall not be received for transport in bulk, except when shipment be made by the full carload.

ART. 136. The loading and discharge of goods transported in bulk shall always be for the account of the consignors and consignees, the cars should be loaded within twenty-four hours after having been placed at the disposition of consignor, and unloaded within twelve hours after having been at disposition of consignee.

ART. 137. When forwarding freight to stations a declaration shall be made, dated, and signed by consignor indicating, first, names, surnames, and addresses of consignor and consignee; second, marks, numbers, quantity, and nature of package; third, their weight, if known; fourth, if freight is to be paid on shipment or on arrival at destination.

CHAPTER VII.—*Live stock.*

ART. 138. Horned cattle, horses, mules, donkeys—rates per kilometer shall be:

Class A.	One head.	Two head.	Three head.	Four head or more, per head.
	Cents.	Cents.	Cents.	Cents.
From 1 to 20 kilometers, inclusive.....	12	20	28	8.0
From 21 to 70 kilometers, inclusive.....	6	9	12	3.8
From 71 to 140 kilometers, inclusive.....	5	7	9	2.8
From 141 kilometers upward.....	4	5	6	2.0

ART. 139. Pigs, sheep, goats, calves—rates per head per kilometer shall be:

Class B.	1 to 5 head.	6 to 10 head minimum rate as for 5.	11 to 20 head minimum rate as for 10.	More than 20 minimum rate as for 20.
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
From 1 to 20 kilometers, inclusive	3.0	2.6	2.2	2.0
From 21 to 70 kilometers, inclusive	1.6	1.6	1.4	1.4
From 71 to 140 kilometers, inclusive	1.0	1.0	.8	.8
From 141 kilometers upward	.6	.6	.6	.4

ART. 140. Minimum charge shall be as for 20 kilometers.

ART. 141. These tariffs shall be applied to shipments of animals by the head, and the halters, bridles, ropes, etc., shall be furnished by the shippers. The loading and unloading of animals and care of same shall be done by the owners, who may for these purposes send a person on the train, paying third-class fare. The company shall attend to the loading and unloading when the owner is not present or when he shall confide same to the company, but in either case the company shall not have any liability on this account.

ART. 142. The animals shipped shall be placed at the disposal of the consignees within two hours following the arrival of the train, and they must be removed on the day of their arrival. From the day following their arrival owners will incur the expenses necessary for the care of same as per tariff.

ART. 143. In case of damage, loss, or death of animals, when the company is responsible for the same, it shall not pay more than \$100 per head for live stock specified in article 138 and \$20 per head for those specified in article 139, unless the owner shall have previously declared their value and paid a risk rate of one-half per cent upon said declared increased valuation in addition to the freight rate.

ART. 144. No cattle, horses, sheep, or other live stock which in the judgment of the company, its officers, or employees, may be infected with any disease shall be carried on the company's lines, and the company, its officers or employees may refuse to take any cattle, horses, sheep, or other live stock suspected by them to be diseased.

ART. 145. Animals not specified shall be classed for payment of freight as belonging to the class which they most resemble, taking into account the space occupied in the cars.

ART. 146. Wild or dangerous animals or animals for exhibition shall only be received when in cages which assure safety and can be moved with ease and without danger.

ART. 147. Small animals, such as cats, squirrels, pet birds, and poultry shall be delivered in cages, boxes, or baskets. They will only be transported by passenger trains and shall pay express rates although traveling with their owners.

ART. 148. For making a shipment of animals it is necessary to present a declaration as follows: First, names and addresses of consignor and consignee; second, place of destination; third, kind of animals and number; fourth, if the shipment be made prepaying freight or freight to be paid at destination.

ART. 149. Animals should be at the stations three hours before the train starts, but advice of shipment should be given one day beforehand, so that the necessary cars may be obtained if none should be ready; and delivery shall be made to consignee two hours after arrival of train at destination.

If after this time nobody comes to take delivery they will be placed in a corral and fed for account of owners.

Animals not taken delivery of by consignee within fifteen days after arrival may be sold, with the consent of the proper official, by the company for the account of whom it may concern. The amount realized shall be paid to owner of animals sold, after deducting the amount due the company for freight, warehousing, food, etc.

ART. 150. The company does not respond for those occurrences during journey which are liable to occur to this class of transport, nor for those which may happen during embarkation or disembarkation, unless resulting from negligence of the company or its employees.

ART. 151. Live stock will be carried by passenger trains at double the rates specified in articles 138 and 139.

CHAPTER VIII.—Vehicles.

ART. 152. The rate for vehicles shall be: Set up, per full carload, at fourth-class rates by freight train, and double this rate if sent by passenger train.

ART. 153. If knocked down, vehicles shall be rated as per classification and be subject to rules governing transport of merchandise.

ART. 154. Each shipment of wagons and vehicles of all kinds must be accompanied by a consignment note stating names and addresses of consignor and consignee: name of station

to which consigned; number and kind of vehicles: if freight is to be prepaid or paid at destination.

ART. 155. No other class of freight shall be loaded on cars containing vehicles.

ART. 156. Transport will be commenced at latest forty-eight hours after vehicles are delivered to company and same shall be taken away by consignee within twenty-four hours after arrival of train at destination, after which time storage will be charged as per tariff.

ART. 157. Vehicles shall be presented for shipment at least two hours before train by which it is required to ship same is due to leave.

ART. 158. The company may refuse to transport any vehicle which from its size may cause danger.

ART. 159. In case of loss or damage the company shall not be required to pay the owners of vehicles a greater amount per unit than—carriages for persons, 4-wheel, \$200; 2-wheel, \$100; carts with springs, 4-wheel, \$175; 2-wheel, \$80; carts without springs, 4-wheel, \$100; 2-wheel, \$50—unless the owners shall have previously declared their value and paid a risk of one-eighth of 1 per cent upon said declared increased valuation in addition to the freight rates.

CHAPTER IX.—*Loading and unloading.*

ART. 160. Loading and discharge of goods shipped by bulk or in full carload shall be for the account of the consignors and consignees.

ART. 161. When the loading and unloading is for the account of the consignors and consignees and these do not effect same within the time stipulated the company will effect these operations at following rate: Twenty cents per ton when goods are packed and easily handled; 30 cents per ton when in bulk or difficult to handle.

In the intermediate stations where the company has no personnel for effecting these operations cost price will be charged.

ART. 162. The company is not obliged under any circumstances to load or unload packages exceeding 1,500 kilograms in weight, except under a special arrangement.

ART. 163. Loading and unloading of live stock shall be done by owners, the company only attending to same when said owner is not present, or at his personal request, but in either case the company will not be responsible in case of damage.

CHAPTER X.—*Storage charges.*

ART. 164. Storage will be charged as per following tariff:

ART. 165. Baggage, 10 cents per day per package.

ART. 166. Express, 10 cents per 100 kilograms per twenty-four hours or fraction of twenty-four hours if not removed within twenty-four hours after arrival at destination.

ART. 167. Merchandise, if not removed on day of arrival at destination or on the following day, will incur storage charges according to the following tariff: For each day or fraction of a day over the above time specified, per ton per twenty-four hours or fraction of twenty-four hours, first class, 60 cents; second class, 44 cents; third class, 28 cents; fourth class, 20 cents.

ART. 168. Live stock, from day following that of arrival at destination, will incur storage charges per head per twenty-four hours or fraction thereof: Class A, \$1; Class B, 30 cents.

ART. 169. Vehicles, if not removed within twenty-four hours from time of arrival at destination, will incur storage as per full carload ordinary fourth-class freight.

CHAPTER XI.—*Reweighing.*

ART. 170. The company shall reweigh merchandise whenever the shipper shall require it, and if the weight ascertained by the company shall prove correct dues for reweighing shall be paid by the shipper as follows: Per 100 kilograms or fraction of 100 kilograms, 10 cents; per full carload, \$1.

CHAPTER XII.—*Lines within city limits and private sidings.*

ART. 171. On lines owned by company within city limits connecting with public or private warehouses at the ports or cities, such lines not exceeding 3 kilometers in length, the following charge per ton shall be made for transport one way over whole or part of length: First class, 50 cents; second class, 40 cents; third class, 30 cents; fourth class, 22 cents.

ART. 172. Lots shipped by full carload will be carried at 10 per cent reduction on above rates.

ART. 173. The time for the return of cars used as above shall be limited to six hours, and unless such cars are put at the disposition of the company within the time fixed herein, the company may make an extra charge for the use of same as specified in article 167, Chapter X, for each period of six hours or fraction thereof over and above the first six hours.

ART. 174. The company shall be paid siding charges per ton according to the following tariff whenever its cars shall be placed on private sidings or switches connecting with the lines of the company outside of its stations at the request of and for the purpose of being unloaded or loaded by the owner of the siding or switch: First class, 30 cents; second class, 20 cents; third class, 12 cents; fourth class, 8 cents.

ART. 175. The time allowed for loading or unloading on private sidings or switches shall be six working hours, to count from time cars are placed on said sidings or switches. If not loaded or unloaded within this time demurrage will be charged as per article 173 above.

CHAPTER XIII.—Military transport rates.

[Taking effect June 1, 1904.]

Base tariffs dated August 29, 1903, and conditions governing same, shall apply to military transport with the following modifications:

ART. 176. The maximum charge for traffic, both passenger and freight, shall be as follows:

PASSENGER.

ART. 177. Per kilometer:

	First class.	Second class.	Third class.
From 1 to 50 kilometers, inclusive.....	P0.056	P0.038	P0.02
From 51 to 120 kilometers, inclusive.....	.046	.034	.018
From 121 kilometers upward.....	.042	.028	.016

ART. 178. When passage for more than 10 and not to exceed 100 persons is called for on one transportation request at one time and for one train, but for any classes of passage, a reduction of 25 per cent shall be made in the above schedule; and where passage for more than 100 persons is called for on one transportation request at one time and for one train, but for any classes of passage, a reduction of 50 per cent shall be made in the above schedule.

ART. 179. The railroad company shall be entitled, when the above-mentioned reductions are made, to a minimum sum, which, in the case of the 25 per cent reduction, shall be equal to the price of 10 second-class fares (without reduction), for the same distance as the transportation request calls for, and in the case of the 50 per cent reduction, to the price of 100 second-class fares, with a reduction of 25 per cent for the same distance as the transportation request calls for.

FREIGHT.

ART. 180. Rates per ton per kilometer:

	First class.	Second class.	Third class.	Fourth class.
From 1 to 20 kilometers, inclusive.....	P0.12	P0.09	P0.07	P0.05
From 21 to 70 kilometers, inclusive.....	.046	.036	.026	.02
From 71 to 140 kilometers, inclusive.....	.042	.032	.02	.016
From 141 kilometers upward.....	.038	.028	.016	.012

ART. 181. The above freight rates are applicable to all hauls of 20 kilometers or more, and for hauls less than 20 kilometers the maximum charge may be the same as for a haul of that distance over any and all roads owned by the Manila Railway Company (Limited) that are subject to the railway tariff dated August 29, 1903, except so much of the line as is covered by Chapter XII of said tariff, and the branch line from Dau to Camp Stotsenberg.

ART. 182. The following rates shall be applied to the Stotsenberg Branch.

Passenger.—Rates shall be the same as those allowed for military transport on the Manila and Dagupan Railway, minimum charge of 20 kilometers from junction not to be taken into consideration.

Express freight.—Will be charged as on the Manila and Dagupan Railway, minimum charge of 20 kilometers from junction not to be taken into consideration.

Ordinary freight.—Transported over branch will be charged a minimum rate as for a haul of 20 kilometers. Any fraction of weight of less than 50 kilograms shall be considered as 50 kilograms.

Car rates will be charged as for a haul of 20 kilometers.

ART. 183. When a shipping officer deems it necessary for, or to the advantage of, the government to take for its use an entire car or entire cars, such car or cars shall be paid for according to the following schedule, which shall be known as the car kilometer rate:

	Per car per kilometer.		
	7-ton.	14-ton.	21-ton.
From 1 to 20 kilometers, inclusive	P0.35	P0.70	P1.05
From 21 to 70 kilometers, inclusive	.11	.28	.42
From 71 to 140 kilometers, inclusive	.112	.224	.336
From 141 kilometers upward	.084	.168	.252

The reduction of 10 per cent specified in article 120 will not be allowed on goods shipped under this rate.

ART. 184. In all cases where railway bills of lading are extended, it shall be the duty of the shipping officer to state in the column headed "Rate" and "Class" whether the freight is shipped on the "classified freight" or "car kilometer" basis, and, if the latter, the number and capacity of cars used must be specified.

The disbursing officer will be guided in the settlement of the bill of lading by this statement.

ART. 185. Bills of lading will ordinarily be prepared in metric units as specified in base tariffs, but when not so prepared the approximation 1 kilometer= $\frac{1}{2}$ mile, 1 kilogram=2.2 pounds and 1 cubic meter=35 cubic feet, may be used as the basis of reduction for settlement of accounts.

ART. 186. Where "insular" or other freight and United States freight are shipped in the same car, the "car kilometer" schedule will not be used. Shipments of "insular" or other freight and United States Government freight will always be made on separate bills of lading.

ART. 187. Minimum distance weight shipments and charges shall be made according to terms of base tariff.

ART. 188. The shipment of bullion and express matter shall be governed by, and settlement shall be made according to, terms of articles 79 to 99, inclusive, base tariff.

ART. 189. The shipment of live stock shall be governed by, and settlement shall be made according to, terms of articles 138 to 151, inclusive, base tariff.

ART. 190. The shipment of vehicles shall be governed by, and settlement shall be made according to, terms of articles 152 to 159, inclusive, base tariff.

LINES WITHIN CITY LIMITS AND PRIVATE SHEDS.

ART. 191. On lines owned by the Manila Railway Company (Limited) within the city limits, and not exceeding 3 kilometers in length, shipments shall be made in car lots only, and payment shall be made as follows: For 7-ton cars, P1.54; 14-ton cars, P3.08; 21-ton cars, P4.62.

The reduction of 10 per cent specified in article 172 will not be allowed on goods shipped under this rate.

ART. 192. Loading and unloading shall be governed by terms of articles 160 to 163, inclusive, base tariff.

ART. 193. Storage charges shall be governed by, and settlement shall be made according to, terms of articles 164 to 169, inclusive, base tariff.

SPECIAL TRAINS.

ART. 194. Special trains for military purposes may be called for upon the authority of the chief quartermaster of the Philippines Division, or the chief quartermaster of a department, when so directed by their respective commanding generals.

Payment for such special trains shall be based on the number of passengers carried and on the rates as set forth in articles 177 and 178, including the reductions, provided that the railway company shall be entitled to a minimum sum equal to the price of 100 second-class fares (with the 25 per cent reduction) for a run of 50 kilometers.

ART. 195. Each coach shall have marked upon it, so as to be clearly visible, the class and the number of men authorized to be carried as a maximum in said coach.

ART. 196. Where a special train is delayed for more than four hours by military authority, either after the hour set for the initial start of such train or while en route (excepting as result of active war), additional compensation shall be paid the railway company for the time of such delay, based on the following rates per hour: Locomotive, P3; 4-wheeled passenger coach, P0.12; 7-ton freight car, P0.06; 14-ton freight car, P0.12; 21-ton freight car, P0.18; completed hours only to be considered.

ART. 197. If any engine is lighted up by order of competent military authority, but not used, a minimum charge of \$25 dollars shall be allowed.

ART. 198. In case of military necessity government service shall have precedence over all other railway business, and in case of emergency, as determined by the military authorities, the entire rolling stock of the road must be placed at the disposition of the government.

ART. 199. Any character of transportation, or a retention of rolling stock by the government for special purposes, not hereinbefore provided for, shall be matter for special agreement.

ART. 200. It shall be the duty of the railway company to furnish, on application of quartermasters or other officers charged with shipping troops and supplies, at least one copy of "Base tariff," dated August 29, 1903, and classification of freight.

ART. 201. It shall be the duty of all quartermasters or other officers charged with shipping troops and supplies over the Manila and Dagupan Railway and its branches to secure and file with permanent office records at least one copy of "Base tariff," dated August 29, 1903, and classification of freight.

HORACE L. HIGGINS,
General Manager.

ANNUAL REPORT OF THE CHIEF OF SUPERVISORS.

Mr. J. W. BEARDSLEY,

Consulting Engineer to the Commission, Manila, P. I.

SIR: I have the honor to submit herewith the annual report of the work done during the fiscal year ending June 30, 1904, under the direction of the provincial supervisors and supervisor-treasurers, and paid for from provincial and municipal funds and Congressional relief rice.

The following tabulation, compiled from the reports of the supervisors and supervisor-treasurers, shows in a compact form the expenditures and work accomplished:

Annual report of provincial public works, fiscal year ended June 30, 1904.

a No work accomplished.

EXPLANATIONS TO HEADINGS USED IN ABOVE TABULATION.

NATIVE LABOR.

This includes practically all of the unskilled and a large part of the skilled labor employed on the various provincial works.

Though not physically capable of performing the amount of work usually expected of laborers in the United States, the Filipino here in his own country renders full value for the wages received, and is the most satisfactory labor that we can obtain.

Though unaccustomed to modern implements, yet when placed under competent foremen, he quickly becomes proficient in their use.

If he becomes dissatisfied he quits and goes home. He makes no effort to hinder the progress of the work, nor to induce others to leave.

The average daily wage paid laborers on road work varies according to the locality and the season, generally being higher in the hemp provinces than in those which produce principally sugar and rice. The Igorrotes work from P 0.10 to P 0.20 per day. In Albay as high as P 1.50 per day has been paid for native labor.

There are few good carpenters found among the natives; they make fair masons, some of them make good foremen, but, generally speaking, they have not had enough experience and are not familiar with modern methods.

[Extracts from annual reports relative to native labor.]

"I have had no occasion to use any labor other than native, except Japanese. I find that for unskilled labor the labor of the country is decidedly the best. On road work the native does fully as much and as good work as the Japanese, is more easily managed, has better

health, and costs about half as much. Carpenters, masons, harness makers, blacksmiths, etc., must be imported, because there are a very few in the province, the young Filipino of the middle class generally believing the work of a mechanic at ₱5 or ₱6 per day less dignified or less honorable than that of the clerk at ₱25 per month."—*Supervisor of Albay*.

"As a whole the laborers can be considered satisfactory, if properly managed, but it is very difficult to secure competent foremen."—*Supervisor of Bulacan*.

"It is my intention to use Filipinos exclusively for road work. I believe them to be more capable as foremen than the average American, who can be hired at \$75 per month or less."—*Acting supervisor of Rizal*.

LABOR OTHER THAN NATIVE.

On account of the difficulty of securing among the natives men duly qualified to take charge of public works, most of the foremen, blacksmiths, and bridge carpenters at present employed are Americans, Spaniards, or other Europeans. Their wages vary from ₱5 to ₱10 per day; also for fine carpenter work Chinese are frequently employed at from ₱2 to ₱5 per day. Less difficulty is experienced in finding foremen who are hard workers than in finding those with patience to properly train the natives.

MATERIALS.

Lumber.—In 1901 Oregon pine was generally used on all works of magnitude; the tendency now is to use native timber. The Oregon pine does not last well in this climate and is besides subject to attacks by white ants. In most of the provinces a great variety of good native timber can be secured at fair prices, but the difficulty of transporting it renders its delivery so uncertain that often American and Australian woods are used.

Road metal.—In the mountainous sections of all the islands are found good materials for road construction, especially in those provinces near volcanos. Volcanic bowlders when crushed make good road metal and concrete. The coral limestone found near the seacoast makes a superior lime when burned, but is rather soft material for road metal. "Adobe" makes a good smooth road, but also wears easily. River gravel is probably most used for road metal. In some localities are varieties of hard clay which makes a good road, and in Albay there are roads constructed of a hard, black sand, which gives a good wearing surface. In some of the islands are found deposits of broken shell, which makes a fine surfacing material. In most of the flat country north of Manila road material is very scarce and often has to be hauled long distances either by rail, cart, or boat.

RENTS, FREIGHTS, CONTRACTS, AND OTHER SERVICES NOT SHOWN.

Under this heading are shown all those items of expense incurred in prosecuting public works, which do not come under the first three headings.

Native contractors generally are able to furnish gravel, bamboo, lime, etc., in small quantities. During the last year there was a notable increase in the amount of work done by contract, the principal contractors being Americans. The money paid out to contractors forms, however, a very small part of the total expenditure.

ROADS CONSTRUCTED.

Under this heading are included roads the repair of which is equivalent to the construction of a new road. The following are the principal types:

1. Dirt roads, which are simply ditched and graded, and sometimes rolled;
2. Metalled roads, which are dirt roads surfaced with gravel, broken stone, or crushed shells;
3. "Adobe" roads, similar to dirt roads, except constructed through "adobe" soil;
4. Coral roads, constructed of coral stone and surfaced with broken coral, gravel, or sand;
5. Sand roads, i. e., dirt roads surfaced with sand;
6. Roads through swamps; and,
7. Trails 2 meters wide constructed through the mountainous regions of Benguet and Lepanto-Bontoc.

[Extracts from annual reports relative to road construction.]

Hagonoy road.—"This road runs through a very fertile part of the province connecting the towns of Malolos and Hagonoy, and is about 4½ miles long. Its entire length is on an embankment, in some places 10 feet above the surrounding country, this height being necessary on account of the annual flooding of the entire country through which this road runs. During the last heavy rains even this height has proven inadequate and parts of this road were under water.

"Nearly all material had to be hauled with bancas from the dikes used to separate the rice fields. The embankment was packed partly by the rains that fell last year, and partly by rolling; and finally a layer of first-class gravel from 7 inches to 12 inches deep was put on in thin layers and rolled. This has made a very good road out of a trail formerly passable during part of the dry season, and then only under difficulties."—*Supervisor of Bulacan.*

Mantandang-Naujan road.—"The road was located through a swamp for 3,500 feet. A space 32 feet wide was cleared of all stumps and underbrush. Most of the work was done by men working up to their waists in water. Then two ditches 24 inches wide and varying from 8 inches to 3 feet in depth were dug parallel to the direction of the road and at a distance of 4 feet on either side of it. The dirt from the ditches was thrown into the 8-foot space between ditches. The road bed had to be raised 5 feet; this was done by hauling stone and piles 15 miles in bancas. Fifty men with bolos cut 10,000 piles in six days. The piles were of the following dimensions, viz, 5 feet, 6 feet, and 8 feet long, and from 4 inches to 7 inches in diameter. The wood was a swamp timber, very easy to cut, when green, but very hard when seasoned. Piles of this wood were examined which after thirty years' service in salt water were found to be perfectly sound. Along each side of the 24-inch ditches the pile were driven as close as possible and in such a manner that they stood up above the top of the ditch from 1½ feet to 4½ feet. The piles in the outer row were inclined inward at an angle of 45 degrees. They were driven 3 feet into the bottom of the ditches, and were then wired together in the rows with No. 9 galvanized wire so that each line of piles became practically solid, and the two lines were firmly fastened together at the top in the same manner. The 24-inch ditches were then filled with stones and well tamped. Then the earth in the 8-foot space was leveled off and a thin layer of stones placed over the entire road, after which corduroy timbers were laid and wired together, and the ends fastened in like manner to the piles along the side of the ditches which were at the ends of the corduroy.

"Then 8-foot canals were begun on the outside of the 32-foot space and gradually widened until they were 12 feet wide at the river end and, on an average, from 2 to 6 feet wide at the bottom and so sloped as to permit the water to drain off. All the earth which came out of these ditches was placed on the road in layers alternating with layers of stone. On completion the roadbed measured 12 feet, with a gentle slope to the canals on either side. It was then crowned with a layer of gravel hauled 15 miles in bancas, and the slopes were planted with swamp grass and shrubs, which took root and grew nicely. All the earth was handled by shovels.

"The entire distance was completed in thirty-five days, at a cost of ₱5,500."—*Supervisor-treasurer, Mindoro.*

ROADS REPAIRED.

The nature of the repairs varied from cleaning grass and underbrush from abandoned roads to the reconstruction and metaling of others.

To the latter class belong the road between Vigan and Pandan, 4.664 miles long, regraded and metaled at a cost of ₱8,233.76, and the road between Laoag and Curriniao, 17 miles long, where 2.10 miles were reconstructed and metaled at a cost of ₱7,976.97. Occasionally it costs more to repair an old road than it would to construct a new one of equal length.

BRIDGES AND CULVERTS CONSTRUCTED.

The bridges constructed are of the following types, viz, Howe, Queen Post and King Post trusses, and pile trestles, timber girders, and arches of stone and concrete. Some of the latter are reinforced with steel ribs. The permanent culverts consist of stone and concrete arches. Those of a temporary nature are constructed of timber or bamboo.

Many substantial and ornamental stone and concrete arches were constructed, especially in the provinces of Batangas, Leyte, and Sorsogon. In Batangas the "Gogo" 10-meter stone arch and the "Sabang" 20-meter stone arch are now under construction. In Leyte the San Joaquin trestle bridge, 266 by 20 feet, was constructed of the best native lumber at a cost of ₱9,298.96.

[Extracts from annual reports relative to bridges and culverts.]

Hagonoy drawbridge.—"The Hagonoy drawbridge, now under construction, consists of a circular center pier 14 feet in diameter, resting well below the river bottom on a foundation of 25 wooden piles 30 feet long and cut off below water level, and 12 concrete piles 30 feet long extending into the pier. The pier consists of a thin sheet-iron shell filled with gravel concrete (1 cement, 2 sand, 4 washed gravel). The weight of the pier is estimated to be 90 tons. On this pier rests a small turntable, purchased from the Manila and Dagupan Railway Company, and a cast-iron rack cast in Manila. The turntable is rim bearing and the rollers run on a circular rail partly embedded in concrete. 'Yacal' beams were used to properly strengthen the top of the turntable to sustain the estimated weight of

the draw span, which is 100 feet long between end bearings, and estimated to weigh, unloaded, 25 tons (500 pounds per linear foot).

"The ends of the draw span will rest on cast-iron rollers, which, running up a slight incline on the timber approach pier, will give the necessary end-lifting effect. The approaches to the draw span are on five 3-pile trestles, well braced, and 60 feet long each. The approaches have a 4 per cent grade to save embankment and still allow small crafts to pass under the closed draw span. All piles are to be incased in concrete to above the high-water line, to prevent attacks of the teredo, which occasionally is found in the vicinity of this bridge. The lumber used is Oregon pine, except the loading beams, keys, and turntable strengthening, which are of yacal. All timber is to be painted with carbolineum, which has proven to be an effective preventive against white ants.

"The turning device for this bridge consists of a rack 13 feet 6 inches in diameter, 2-inch pitch and 4 inches high, which engages a pinion connected to a horizontal gear by a vertical shaft. The pinion of this gear has a squared shaft on which fits a key, which, if worked with a lever, enables one man to move the bridge. The locking device is simple and was secured with the turntable. Suitable arrangements will be made to close the approaches, to prevent accidents, when the bridge is open.

"The total cost of this bridge, when completed, will be ₱14,000; ₱10,500 of this was appropriated by the municipal council, which put the planning and building of this bridge entirely under my supervision."—*Supervisor, Bulacan.*

"The most important and largest of the bridges is the one across the Ogod River at Donsol. Two concrete abutments and five concrete piers support six timber spans of five panels each. The total length of the bridge between abutments is 85 meters. The abutments and piers rest on rock foundation and the wooden superstructure is of the best native lumber. An interesting point about this bridge is that it was constructed almost entirely by hand labor; the stone was broken by hand and the lumber sawed by hand. Part of the cement was rolled 3 miles from Donsol, because no other means of transportation was available. A constabulary guard was necessary part of the time to protect laborers from ladrones, who were active at that time. Total cost of bridges was ₱14,692.26."—*Supervisor, Sorsogon.*

BRIDGES AND CULVERTS REPAIRED.

The nature of the repairs varied from placing a new plank or a bamboo mat on a bridge to render same passable, to remodeling and reconstructing bridges of importance.

BUILDINGS CONSTRUCTED.

This includes the construction of all provincial buildings, schoolhouses, and municipal buildings of which the supervisor had charge, regardless of the sources of funds providing for such construction.

Among the most important buildings constructed during the past year under the direction of the supervisors are the following: Secondary schoolhouse at Tarlac, municipal school building at Malolos, municipal market at Malolos, provincial secondary school at Laoag, and the new provincial building at Malolos, and various barrio schoolhouses built throughout the islands, generally constructed of bamboo and nipa.

[Extracts from annual reports relative to buildings constructed.]

New provincial building at Malolos.—"The original plans for this building were selected from competitive designs submitted. These plans were changed considerably after acceptance and finally the contract was let for ₱36,075. The structure is built of Oregon pine, excepting the floor, and rests on a stone foundation, 132 by 117 feet, 5 feet high. The floor is to be of yacal and guijo laid alternately. The building is one story high and has a veranda roof supported on the outside by ornamental hard-wood posts, a row of which surrounds the building.

"Two inner courts provide light and air for the corridors inside. The office ceilings are 16 feet 6 inches high, and there is plenty of room for any enlargement anticipated during the next few years. The roof is of corrugated iron and has a decorative ventilator tower.

"The framing is a combination of American and native practice, some of the posts running into the ground (these are spliced at their lower ends to molave); others are mortised into a sill bolted to the foundation. All connections of the trusses are bolted.

"Partitions have 2 by 4 inch studding and are sheathed on both sides, offering great lateral resistance, which is almost totally lacking in the native construction.

"All plumbing will be modern and the building will be lighted by electricity and be supplied with electric fans.

"For this purpose a contract, at ₱6,313.90, was awarded by this office for the installing of a small electric-light plant."—*Supervisor, Bulacan.*

Calapan and Luban school buildings.—"Calapan and Luban schools are built of the native lumber, shell windows, galvanized-iron roofs, painted white, and are 60 feet long, 25 feet wide, and the rooms are 15 feet high.

"In each case the materials were donated by the people and labor paid for by the province."—*Supervisor-treasurer, Mindoro.*

BUILDINGS REPAIRED.

Most of the provincial offices have been repaired, in some cases necessitating extensive improvements to both buildings and grounds. Several vaults were constructed for the provincial treasuries.

SURVEYS.

These consist of surveys, plans, and profiles of proposed roads, including cost of supervisor's temporary employees, and surveys and plans of municipalities (by contract), the average price paid for the survey of a municipality being from ₱ 450 to ₱ 500.

EQUIPMENT.

On account of scarcity of draft animals in the provinces, several of the supervisors, in order to successfully prosecute the various public works under their charge, have been compelled to buy from provincial funds such draft animals as were needed. The plants have been increased by the addition, from time to time, of various tools, implements, scrapers, carts, wagons, road rollers, tramways, traction engines, and rock crushers.

MISCELLANEOUS.

Under this heading are embraced all kinds of public work done under the supervisor's direction and not shown under the other headings, embracing such items as cost of handling Congressional relief rice, cost of constructing and operating provincial pounds, cost of reading river gauges, construction of levees, clearing channels of rivers for navigation, construction of piers, telephone and cable lines, building retaining walls to protect river banks and foot of fills, testing for water supply, transportation of road and bridge supplies, and other miscellaneous expenses.

At Romblon a pier 55 by 25 feet was constructed of hardwood, resting on piles sunk into coral rock, cost ₱ 1,623.82.

A submarine cable was laid between Virac and Tabaco by the provincial government of Albay cost ₱ 1,101.50.

[Extracts from annual reports relative to miscellaneous work.]

Cagayan River improvement.—"Considerable work has been done at Afusing, which is about 3 miles up the Cagayan River from Alcala. Large trees have been filling in the channel year after year, being undermined by the river, which cuts back at the rate of about 50 feet per year at this point. Dynamite was freely used in the work to blow out or loosen up the stumps, they then being pulled out by block and tackle. The river channel is now clear."—*Supervisor, Cagayan.*

Protection from river encroachment.—"To keep the banks of the Rio Grande in Nueva Ecija from washing away, three-fourths of a mile was protected by lines of stakes, back of which rows of young trees were planted; cost, ₱ 478.50."—*Supervisor, Nueva Ecija.*

"Probably the most important work done during the year was the construction of levees along the western bank of the Rio Grande de la Pampanga at certain points.

"At Mandasig the old levee was entirely washed away, leaving a gap 900 feet long and 20 feet deep in the center; besides 700 feet of levee on the extremities of this gap were very low. Work was started May 2 and completed May 19; the average number of men employed each day was 450, with 25 carabaos. The total amount of money expended by the province at this point was ₱ 1,399.60. The property owners and citizens of the affected towns donated ₱ 786.10, which was expended by the provincial governor as their agent, making a total cost of this work ₱ 2,185.70. The newly constructed levee is 12 feet wide on top; side slopes were one and one-half to one; the average height of fill was 8 feet, for a total length of 535 yards of new levee completed. The new levee was protected from the river current by seven rows of bamboo lattice-work 2 feet apart, firmly anchored in the ground and well braced at the top. The space between these bamboo fences was filled with earth and well tamped; the dirt behind the fences was packed in irregular layers by rolling with a 3-ton road roller drawn by six carabaos. American plows and drag scrapers were also used with carabaos. The length of the new levee completed in this manner at Mandasig, Lanang, Pansino, San Juan, San Pedro, and other points was 2.102 miles. The cost to the province of this work was ₱ 6,456.12.

"Due to the closing of these gaps or breaks in the old levee, the towns in the affected district will enjoy increased crops this year and hereafter as long as the floods are prevented. The provincial governor and various municipal officials and landowners, whom I have consulted, estimate the annual gain to be from ₱400,000 to ₱900,000.

"The municipal officials and property owners of the above-mentioned pueblos deserve much credit for their active interest in the work and for their willingness to aid the province with money, bamboo, carabaos, etc., whenever called upon to do so."—*Supervisor, Pampanga.*

The following list shows the respective official positions authorized in each province for the supervision of public works, the number of the act creating same, the maximum salary authorized, the name of the present incumbent, and the date of his appointment:

a Not to exceed \$4,000.

The following general subjects have received considerable attention from the provincial supervisors:

CARABAOS PURCHASED FROM THE CONGRESSIONAL RELIEF FUND.

The receiving of the carabaos from the insular purchasing agent, preparing suitable corrals and stockades for their reception and protection, making arrangements for feeding and pasturing same, arranging for their sale to the inhabitants, securing the necessary affidavits and certificates for such as died, and the extra correspondence occasioned on account of these animals, caused the supervisors a great deal of extra and unsatisfactory work. In case of future sales of draft animals it would seem better to allow the insular purchasing agent to sell to the inhabitants direct.

THE DESTRUCTION OF LOCUSTS, EXPENSES PAYABLE FROM CONGRESSIONAL RELIEF RICE.

Act 817 requiring all inhabitants of the Philippine Islands to aid in the destruction of locusts, and providing that a ration of rice should be issued to those not able to ration themselves, would have worked great hardship on the majority of the people, provided

the rice had not been on hand for prompt issue. In order to do this effectually, the supervisors made every effort to distribute the rice received from Manila, purchased in accordance with the provisions of Act 797, so that each municipality or barrio of importance, infested with locusts, would have a stock on hand sufficient to feed the people while engaged in destroying the pest.

The immediate effect of this distribution was to cause great activity, and the presidents of the infested municipalities reported one after another that there were no more locusts in their respective jurisdictions.

They were, however, ignorant and careless in making out their vouchers, and the bulk of the pay rolls and other accounts necessary to account for this expenditure had to be made out in the office of the supervisor. As a result, the increase in the work of the supervisor's office, by adding thereto the office work of 20 or 30 municipal offices, caused often a complete stagnation, and even now, though it is nearly a year since the locusts disappeared, many of the supervisors have not accounted for the locust rice expended under their direction.

CONGRESSIONAL RELIEF RICE FOR PUBLIC WORKS.

The sending to the different provinces by the insular government of large consignments of Congressional relief rice to be used in relieving distress by giving the inhabitants employment on public works undoubtedly enabled the supervisors to make a much better showing than they otherwise could have done. But there are many objections to this use of rice as compared with money. It is bulky and hard to transport, especially to inland towns. Every time it is handled there is a certain per cent wasted. Great care must be taken in its storage, and even then after two or three months it begins to spoil.

It is difficult to find intelligent men to place in charge of its proper distribution. Laborers prefer money, and when obliged to accept rice they demanded more. Sometimes the wages paid in rice amounted to double what they were accustomed to receive in money. On resuming cash payments they demand money equivalent to the value of rice received. Hence its use tends to demoralize and unsettle the labor conditions. The loss through wastage in transportation, ravages by worms, bugs, and rats, and by mold and decay amounts to fully 10 per cent of the original amount, and in some cases more.

When the various sources of loss are taken into consideration, and also the higher wages paid, it is believed that the use of rice in paying for public works increases the cost of same nearly 50 per cent over what the same work would have cost were payments made in cash.

PROVINCIAL POUND.

The operation of the pound law caused the supervisor a good deal of extra work of very much the same nature as was occasioned through handling the insular carabaos.

The law states that the supervisor is to receive and receipt for such animals or other property as may be delivered to him, and to keep the same for thirty days, unless the owner previously establishes his title, and then to sell them at auction, all costs of maintenance to be deducted from the proceeds of sales, and the remainder to be turned into the provincial treasury.

In a province where ladrones are plentiful, as Cavite, a strict interpretation of the law would mean that the supervisor would have to be at the pound every day to receive animals and to sell those captured thirty days previously. In case an animal died, or did not bring when sold enough to cover cost of keeping, there was no arrangement whereby the supervisor could be reimbursed for cost of keeping. If the supervisor kept the animals longer than thirty days, hoping to realize better prices, he would have to pay for the excess days out of his own pocket. This office finally brought the matter to the auditor's attention, and his interpretation of the law allowed the supervisor considerable discretion, and secured him against the probability of the losses referred to.

PROVINCIAL BOARD OF EXAMINERS FOR THE CIVIL SERVICE.

The members of the provincial board should be relieved from this duty, which takes up considerable time, and for which they are not specially qualified. The civil service board should provide a sufficient number of traveling examiners to properly carry out these examinations.

ROAD MAINTENANCE.

Complaints regarding the violations of the road laws have been made by many supervisors. These violations consist principally of the encroachment of houses on the public roads, stealing of road materials, bridge timbers, etc., and the destruction of roadways by carabaos, irrigating ditches, etc. Proposed laws remedying these defects are under consideration by this office, and will be submitted in the near future.

WIDE-TIRED CARTS.

Act No. 774 of the Commission, which was intended to bring wide-tired carts into general use by prohibiting narrow tires on improved roads has, so far, fallen short of the desired end. The reason is obvious. Native carts, such as are generally used, are produced very cheaply. In some of the provinces a cart complete will cost only P 20, or even less. The lowest price wide-tired cart furnished by the insular purchasing agent costs P 45. To overcome this difficulty, this office has prepared and distributed to the various supervisors and supervisor-treasurers, blue-prints of a standard type of cart, hoping that the native wheelwrights might be induced to manufacture wide-tired instead of the present narrow-tired carts. It is understood that in at least three of the provinces this is now being done, while in another the narrow fellows are broadened to receive a wider tire.

MONTHLY REPORTS OF SUPERVISORS.

The reports of the supervisors first submitted to this office were of very little value from a statistical point of view, on account of the scant information conveyed regarding the nature of the work reported, its location, and cost. This difficulty has been overcome, and the reports now received are, with few exceptions, satisfactory.

GENERAL INSTRUCTIONS TO SUPERVISORS.

The chief of supervisors, in all his correspondence with the various supervisors and in personal interviews, has endeavored to impress upon them the following ideas:

(a) *Road maps.*—That there should be in each office some system of showing the actual conditions of the provincial roads, whether by maps or by notes.

(b) *Scheme of road improvements.*—That the provincial boards, after consultation with the supervisor, should decide on what roads are to be improved or constructed, and this scheme should be adhered to.

(c) *Value of roads in developing agricultural resources.*—In view of the fact that agriculture is the principal source of wealth in the Philippines, and realizing that often large pecuniary losses are suffered by the producers through inability to market their crops at propitious seasons on account of impassable roads, it has been forcibly presented to the supervisors that those roads should be first repaired that afford an outlet to the products of the country.

Especially in those provinces producing sugar is the need of good roads apparent. We have been informed by reliable dealers that the highest prices are obtained for sugar that is marketed in the months of September, October, November, and December, and frequently it so happens that at this season of the year the interior roads are impassable, the sugar can not be gotten to the coast, and by the time the roads are dried out the price has fallen, in some cases, to about half what it was in the months first mentioned. The writer is aware of nearly 100,000 piculs of sugar (in one municipality) valued in December at P 500,000 that on account of bad roads could not be sold until April, and the price then received was about P 260,000, a difference between the value of the sugar in December and April of P 240,000.

(d) *Road maintenance.*—That the question of road maintenance is one of great importance, and to which very little attention so far has been paid, and that some system should be put into operation at once. Any system of proposed road maintenance, to be effective, must be carried out either in conjunction with the provincial supervisor or by the municipal authorities acting alone. Local pride must be stimulated to have good local roads.

(e) *Standard designs of roads and bridges.*—That roads and bridges of a permanent character should be constructed.

(f) *Provincial buildings.*—In several of the provinces (Rizal, Masbate, Sorsogon, and Occidental Negros, for example) the provincial governments have no office buildings, and private buildings are used for this purpose and for which high rents are paid. The supervisors of these provinces have been instructed to do all in their power to secure the construction or purchase of suitable buildings for this purpose.

(g) *Prison labor.*—To make the best use possible of prison labor. In some provinces the use of prison labor has given satisfactory results.

The following extract from the annual report of supervisor of Sorsogon shows the method adopted with satisfactory results:

"On December 15, 1903, at the request of the provincial supervisor, the provincial board passed an act requiring all prisoners available for work to be employed in regular labor on the public works of the province, under the direction of the supervisor. The supervisor was empowered to employ an American foreman and the necessary guards. This foreman, when placed in charge of prison labor, was made jailer in addition to his other duties, and the supervisor, through the jailer, took charge of the feeding of prisoners and the maintenance of the jail. Several changes were introduced and expenses were cut down until,

estimating prison labor at prevailing prices, the jail has become nearly self-supporting. The prisoners are employed on various pieces of work, the main work being the construction of 600 feet of retaining wall along the bay front. They also unload provincial supplies from the steamers, assist the carpenters and blacksmith at work in the mule corral, do janitor work and many other kinds of labor for which the province would otherwise be compelled to pay."

(h) *Cooperation with native officials.*—The necessity of cooperating with the native officials in prosecuting their various works and to get them interested in public improvements has been suggested. The fact that so many municipalities have placed their public works under the charge of the supervisors proves the desirability of this plan. Excellent results were obtained in Sorsogon Province, and the methods used there might be well copied by other progressive provinces, viz, the province has a large and well-equipped plant for road construction, and there is an arrangement between the provincial board and the different municipal boards whereby the province furnishes the plant for road construction within the municipal boundaries and pays cost of maintaining same, the remainder of the expenses, such as hiring laborers, buying materials, etc., being paid for out of the municipal funds. The advantages resulting from such a system are three-fold. First, instead of the province wasting ₱12,000 in keeping up a large plant, as at first appears, the road and bridge fund was increased by over ₱40,000 (municipal funds) which otherwise would have been expended in insignificant repairs, carried out under the supervision of unskilled *presidentes* and councilmen. Second, the municipalities get much better results for their money. Third, the province has the use of a well-trained body of foremen, teamsters, hostlers, time-keepers, and blacksmiths.

The advantage in moving this trained force around from place to place to prosecute different works instead of having to organize afresh for each separate piece (and often where suitable men can not be gotten) is apparent, not only in time saved, but in the actual cost of the work.

(i) *Irrigation, water power, navigation of rivers, municipal maps.*—Investigations on the possibilities of irrigation, the utilization of water power from mountain streams, the feasibility of opening rivers to navigation, and other problems having for their object the development of the resources of the province and the betterment of the condition of the inhabitants have been suggested. The necessity of securing accurate maps of the province and of the municipalities therein, having a scale large enough to permit of all the landed property of the municipality being indicated thereon has been suggested.

PROPOSED ROAD LAW.

The necessity for the improvement of existing roads and for the construction of new ones is evident to all. The Spanish roads generally are well laid out and formerly were kept in repair by a system of compulsory labor. At first forty days' labor was required every year, from each person; as the roads improved this was reduced to fifteen days' labor per annum. The system was much abused and was finally abolished by the Spanish Government, but undoubtedly, in spite of the abuses, much important work was accomplished while said law continued in effect. At present, in the province of Occidental Negros, where 75,000 *cédulas* are sold each year, the road tax amounts to less than ₱20,000 per annum. This amount, estimating a laborer's daily wage at ₱0.40, is equivalent to the hire of 50,000 laborers for one day. Under the old law of "*prestación personal*" each of the 75,000 men who bought *cédulas* would have to labor 15 days on the roads, so the province would be entitled to one day's labor from 1,125,000 men.

It appears that the only method whereby the roads can be properly repaired and maintained is to enact a law requiring every able-bodied male inhabitant to labor at least five days on the roads or to pay into the provincial treasury a cash equivalent, under regulations similar to those existing in the United States. Because this service was misused under the former régime is no reason it will be abused now. The strict and impartial administering of justice by the present government ought to settle any question in the minds of the doubtful as to whether there will be any abuse of the road tax in case the Commission should pass this law.

The old law was odious on account of its numerous abuses, and the extensive personnel required to operate it. The Spanish law was used as a wrench to squeeze the last cent from a man, by threatening to send him a long way from home to work out his road tax. Instead of being used to improve the highways as intended, it was in reality used to fill the pockets of a lot of corrupt officials, from the governor down to the capitán municipal and the *cabeza de parangay*.

From the information received it is believed that such a law would be acceptable in several provinces, and it is suggested that at first the proposed law be made effective only in those provinces expressing a desire to enforce it.

DUTIES OF SUPERVISORS.

The supervisor's duties are at present so many and so varied that he has little time left for professional work. He is required to give immediate supervision to all construction and engineering work in the province; he is the property clerk for the province. The supervisor must, in addition to these duties be a member of the provincial board, the board of health, the board of land-tax appeals, and the revision boards.

It seems to be the general opinion among the supervisors that their office help is entirely out of proportion to the work required.

The quarterly property returns are in English and contain perhaps 500 headings, each of which may require, to meet existing regulations, from one to a dozen vouchers (including, perhaps, receipts, certificates, affidavits, inspection returns, etc.). It can readily be seen that the supervisor, unless he has an intelligent English-speaking clerk, is compelled to devote a large part of his time to purely clerical work. It is costly economy to require a supervisor to do the work of a clerk whose salary would rarely be more than \$1,200.

The treasurer, who has a large and well-equipped office force should be held accountable for the property, to which plan the auditor and the insular treasurer practically agree.

RECOMMENDATIONS.

In order that the supervisor may be relieved of a large part of his present office work, so that he may devote himself more to the development of the resources of his province, and in order that he may have suitable means to carry out this development, it is respectfully recommended that:

(a) The supervisor be allowed either an adequate office force, or that he be relieved as provincial property officer.

(b) The supervisor be made responsible for the proper execution of all municipal public works.

(c) Instead of issuing rice in lieu of money in times of distress, rice be deposited where relief works are in progress and sold to those needing same at cost price, plus cost of transportation.

(d) That all examinations for applications to the civil service be held by traveling examiners, and not by the provincial board.

(e) That the Commission be requested to pass a law requiring every able-bodied male inhabitant between the ages of 18 and 60 to labor on the public roads not to exceed five days per annum, or to pay into the provincial treasury, for the benefit of the road and bridge fund, money equivalent to five days' labor, and that the provincial board be given authority to pass such acts and regulations as may be necessary to put into effect the provisions of such law.

Very respectfully,

J. D. FAUNTLEROY,
Chief of Supervisors.

MANILA, P. I.,
September 26, 1904.

REPORT OF BENGUET IMPROVEMENTS.

TWIN PEAKS, P. I., September 1, 1904.

The honorable SECRETARY OF COMMERCE AND POLICE,

Manila, P. I.

SIR: I have the honor to submit the following report of operations in regard to the improvements in Benguet Province authorized by act 794 of June 30, 1903, which appropriated the sum of \$2,500 for the survey of a wagon road from Naguilian, in the province of Union, to Baguio, in the province of Benguet; and the sum of \$5,000 for the survey of a town site in Baguio in the province of Benguet.

By the terms of section 2 of this act the funds appropriated were to be disbursed under my direction by a duly bonded disbursing officer.

NAGUILIAN-BAGUIO WAGON-ROAD SURVEY.

Mr. E. L. Heath was appointed chief engineer of this survey and early in July organized his party and took the field for work, Mr. Jacob Feldman being the disbursing officer of this party.

Mr. Heath connected with the bench mark of the United States Coast and Geodetic Survey in San Fernando, province of Union, and his levels were referred to the plane of reference established by that survey. From Naguilian the survey was begun and carried on to completion in December, 1903. The maps and estimates were subsequently completed and will

eventually be forwarded for file and record in the office of the consulting engineer of the Commission. For the present they are held in this office, as the data they contain will be needed in the preparation of the general map which will accompany the final report of improvements in Benguet Province.

This survey established the fact that a road could be built from Naguilian into Baguio, a distance of about 28 miles, with a maximum gradient of 6 per cent, and at an estimated cost of \$350,000 United States currency, but the Commission decided not to undertake the work at present.

BAGUIO TOWN-SITE SURVEY.

Mr. W. A. Milstead was appointed disbursing officer and Mr. George H. Hayward chief engineer of this survey.

Mr. Hayward proceeded to Baguio in the month of August, 1903, but owing to the necessity of speedy completion of the surveys of the Benguet road, he and his party were employed during the month of August in a survey from the foot of the old horse trail near Laoacan to the town of Baguio. After completing this work, he was engaged upon a topographical survey of the town of Baguio. Up to the present time the survey has been confined to the central basin and adjacent hills around and on which it is proposed to locate the government buildings and business section of the town. This survey has been made in most careful manner and notes taken which will enable maps to be platted with a contour interval of 1 foot, the work being done in such manner as to obviate the necessity of making resurveys for special works.

Mr. Hayward was also detailed to make the survey of the upper end of the proposed Naguilian road, his work meeting that of the Naguilian road survey about 1 mile below the Iresan River, some 5 miles from Baguio. In addition to this work, Mr. Hayward has made a survey of the old Benguet road from Baguio to a point 2 miles below Laoacan, also a survey for the irrigation of the Trinidad Valley. Mr. Hayward constructed a temporary ditch for the use of the government experimental farm in that valley. He has been called upon frequently for other engineering work and made a survey and gave testimony in the case of *Mateo Varino v. The United States* in the court of first instance at Baguio. He has also completed a survey of the proposed township limits of Baguio. Attention is invited to Mr. Hayward's report, which is forwarded herewith, and especially to the last paragraph thereof. It is recommended that a building be authorized for construction as an office for the engineer at Baguio.

Respectfully submitted.

L. W. V. KENNON,
Major, Tenth U. S. Infantry, in Charge.

BAGUIO, BENGUET, P. I., June 30, 1904.

L. W. V. KENNON,
Major, Tenth U. S. Infantry,
In charge of Benguet Improvements.

SIR: I have the honor to submit the following report of the work done by the department of Baguio improvements, a list of which is as follows:

Survey of upper section of Bued River canyon; survey of upper end of Naguilian road; survey of original Benguet road from Baguio to a point 2 miles below Laoacan; survey for irrigating Trinidad Valley and construction of temporary ditch for use of Government Experimental Farm; survey for maps and testimony in court of first instance at Baguio in the case of *Mateo Carino v. United States* for composition of certain lands claimed by said Carino; survey of government reservation in Benguet Province for the purpose of designing and laying out a street and public works system for the city of Baguio, the summer capital of the Philippine Islands.

The survey of the upper section of the Bued River canyon was for the purpose of locating a route for the Benguet road, which was found to be practicable, obtaining an entrance into the Baguio basin over the watershed line between the Bued and Naguilian rivers at its lowest point. About 8 miles of road are required by this route to connect Camp 5, so called, with Baguio.

The survey of the Naguilian road was started from Baguio and, according to your instructions, was run to meet the Naguilian road survey party coming up from Naguilian. The junction was made at a point 1 mile below the Iresan River and some 5 miles from Baguio.

The survey of the old Benguet road included a connection of the survey line run from Camp 4 of the Benguet road over Kias hill, and also a topographical survey of the country adjoining the creek that drains the Laoacan Valley into the Bued River, which survey was for the purpose of considering the practicability of connecting the proposed road up the Bued River canyon with the old Benguet road and using the latter road from Laoacan to Baguio.

The survey for the Trinidad irrigation included a plan of the present Trinidad road from Lucban to the government farm.

The plan proposed a new location of the ditch and road farther removed from the Trinidad River which has encroached on the adjoining land. The estimate of ₱1,700 included the cost of labor and materials but not the land damage incident to the road and ditch crossing private land.

In accordance with instructions to get water onto the farm at the earliest practicable date, ₱697.16 were expended in constructing about 2,000 feet of new ditch and cleaning out some 6,000 feet of the ditch now used by the Igorrotes for irrigating purposes. With the exception of about ₱50 the amount was used on work which may be incorporated into the plan proposed for a permanent plant.

It is desired to state at this time that the temporary work above referred to has been washed away by the river, and if a temporary structure is again built the large opening in the road will require a more expensive piece of work.

The case of *Meteo Carino v. United States* took seven days' time, and included the preparation of three maps for the purpose of comparing and explaining the relation of the claim to the conditions. The greater part of this land is within the military reservation, and is all within the new bounds which are proposed for the government reservation.

Up to the present time the survey of the government reservation has been confined to the central basin and adjacent hills, around and on which it is proposed to locate the government buildings and business section of the city, and which are within the boundaries of the original reservation. The survey, as far as completed, has been platted and a tracing forwarded to your headquarters.

It is the intention to at once prepare a plan of the proposed street system for the center of the town, together with the public works, that they may be acted upon by you and, upon approval, laid out on the ground, ready for construction work to begin as soon as orders to that effect are received. Inasmuch as it is desirable that this part of the town, together with such additions as may be made in the near future, shall be in harmony with the landscape and the future street system of the entire reservation, it is important that the topographical maps cover considerable area outside of that on which the streets may from time to time be laid out. As it will be beneficial to all interests, public and private, that individual effort to improvement is encouraged by a system of lots suitable for the purpose, it will be advantageous to have the entire reservation mapped as soon as practicable, that delay in the final disposition of land suitable for building shall be of short duration.

To serve all probable interests, there is liable to be three classes of work under way at one time, namely, work under construction, surveys for extensions, designing and laying out extensions; attention is therefore invited to the need at the proper time of a force sufficient to handle the work, and house suitable for headquarters. While recognizing the desirability of avoiding as much as possible the erection of temporary structures, as the work progresses, the notes, records, and other property increase in value, and some building that will protect such property and provide suitable accommodation for the office work should be erected by the beginning of 1905, at which time the Benguet road will probably be ready for the transportation of such supplies as will be required for carrying on the construction work in Baguio.

Very respectfully,

GEO. H. HAYWARD,
Chief Engineer Baguio Survey.

MANTLA, P. I., October 4, 1904.

The honorable the SECRETARY OF COMMERCE AND POLICE, *Manila, P. I.*

SIR: As disbursing officer, Benguet improvements, I have the honor to submit for the year ending September 1 a report of the appropriations, amount disbursed, and balance on hand under appropriation of surveys of Baguio.

Total appropriations.....	₱17,000.00
Total disbursements.....	15,401.53
Balance.....	1,598.47

The above disbursements also cover supplies purchased in connection with this survey to the amount of ₱3,250.28 and ₱5,000, which was the amount of resolution passed by commission for work on Trinidad irrigation ditch.

The employees connected with this survey are: One chief engineer, at ₱375 per month; 1 rodman, at ₱90 per month; 1 cook, at ₱40 per month; 20 Igorrote laborers, at ₱0.50 per day.

It is requested that this report be attached to the report of Major Kennon, officer in charge Benguet improvements.

Very respectfully,

WALTER A. MILSTEAD.

REPORT OF BENGUET ROAD.

TWIN PEAKS, P. I., September 1, 1904.

THE EXECUTIVE SECRETARY, Manila, P. I.

SIR: I have the honor to submit the following report of operations on the Benguet road from June 1, 1903, to September 1, 1904:

By the terms of resolution of the Commission of June 1, 1903, I was placed in charge of the Benguet road, which was inspected by me for the first time about June 8, 1903. At that time there were but 173 employees engaged upon the work.

The preliminary work of organizing and starting the Naguilian wagon road and the Baguio surveys occupied me until August 14, when I arrived at Twin Peaks and established my headquarters at that point. The Commission had given me residence at Baguio, but owing to the importance of the work on the Benguet road that residence was given up, that more attention could be given to the work on this road. The organization of the administrative and construction departments of the work was begun at once. By the end of September there were about 2,600 laborers on the road to feed and house, necessitating a regular organization and system. A disbursing officer was appointed, who had charge of the rolls and timekeeping and of all disbursements on account of the road; the transportation department, which had charge of the transportation of supplies from Dagupan to Twin Peaks and their distribution after they reached that point; the commissary department, having charge of the storage and distribution of rations; the property department, having charge of all property in use or purchased for the road, excepting commissaries; the medical department, to look after the sick and injured; the engineering department, charged with the making of surveys and the location and laying out of the roadway and of the design and construction of the walls, bridges, and culverts needed for the road.

Regulations for all departments of the road were drawn up and published.

The working force was organized in gangs of about 100 men each, under a foreman whose duties required him to look after the work of that number of men and their proper feeding and housing.

But little change has been necessary from the first organization made, except that the disbursing officer was given supervisory charge of the commissary and property departments.

On my taking direct charge of the work, a roadway had been opened up practically as far as Twin Peaks, with some considerable work above. The instructions of the Commission as given to me were to prepare this roadway for the placing of track for an electric railway. This necessitated an entire change in the method of construction which had been in vogue previously, and necessitated careful surveys. These were ordered in July, and for some time the engineering department was engaged entirely on this work.

Mr. Boulay, assistant engineer, made a preliminary survey from Camp Sub 3 to Thirty Minute Creek. Messrs. Dobbs and Barton, assistant engineers, made a preliminary survey from Thirty Minute Creek to the foot of the horse trail from Laoacan. Mr. Hayward made a preliminary survey from the foot of the horse trail into Baguio. Surveys were made by myself in person of the line from Twin Peaks to Dagupan, and from Twin Peaks to Mr. Boulay's point of beginning. These surveys afforded data on which preliminary estimates could be made of the cost and character of construction required.

In the course of these and subsequent surveys every possible route by which a road could be constructed from the Bued River canyon to Baguio was examined and surveyed. The one adopted appears by the process of elimination to be the best if not the only satisfactory route existing.

While the gang of 100 men remains a unit of the force, the present organization, which has been developed by experience on the road, is in camps, each under the charge of a first-class foreman, and containing from 200 to 600 workmen, according to the nature and character of the work.

The work from Twin Peaks had been pushed up to Camp 3 by January 1, 1904. On and after that date several camps were established beyond Camp 3, and by the 1st of April the roadway was opened, and was passable for horses to Camp 4, but considerable work had still to be done before this route could be utilized for cart transportation. The road was put in fair condition for the hauling of supplies to Camp 4, although temporary bridges and culverts only were constructed in order to meet the needs of transportation. As the work was finished in the vicinity of a camp it was moved forward beyond Camp 4, and at this date there are six camps between Camp 4 and the foot of the horse trail from Laoacan. Others will be established as soon as the final location of the route has been staked out on the ground.

With regard to the administrative features of the road, the aim has been to systematize and to place all departments upon a business basis. Purchasing was done only on my authority, and by agents appointed by myself. It was found economical and necessary to have an agent in Manila, whose duties are to represent the road, and on special authority granted in each case, to purchase the stores and supplies needed for the use of the road. It

is believed that great economy has resulted from this measure, and that in general the best prices have been obtained in all purchases made on account of the road.

A very considerable amount of work has been necessary below Twin Peaks. This road was relocated and reconstructed below Twin Peaks for a distance of about a mile. This work was begun in July, and is now practically completed. The Bued River, on the old location, was crossed by bridges Nos. 39 and 40. In the typhoon of October 26, 1903, bridge 39 was carried away by the flood. A temporary bridge was put in at once, but as the approaches to both these bridges were entirely impracticable if track were to be laid, a cut was made on the face of the cliff and the two river crossings avoided at these points.

The freshets of last and of this year washed away the lower road for considerable distances, and it has been necessary to keep a maintenance force almost constantly employed in order to keep this portion of our line of supplies passable. Its location in my opinion is very defective, and the reconstruction of the portion below Camp 1 will probably cost as much as to build a new road by way of San Fabian, on a more direct line and on an almost ideal location, considered from the point of view of engineering construction.

Surveys of this route have been made, and a special report, with estimates and recommendations, will be forwarded in a short time.

Attention is invited to the accompanying reports of the several heads of departments of this work for detailed statements of the operations pertaining to each respectively.

Respectfully submitted.

L. W. V. KENNON,
Major, Tenth U. S. Infantry, in Charge.

REPORT OF THE CHIEF ENGINEER, BENGUET ROAD.

Col. L. W. V. KENNON,
Officer in Charge.

SIR: In accordance with your verbal orders of August 1, 1904, I have the honor to report as follows for this office for the year ending June 30, 1904:

The writer assumed charge of the office of chief engineer April 10, 1904, and as there were no official records or correspondence in the office this report really covers only the last quarter. Nearly all of the work illustrated by photographs was under way, however, and it will be attempted to make the report suggestive rather than complete.

Since my assumption of office the work carried on has been as follows:

- (1) Location between Camps 4 and 5, in charge of Mr. Chas. G. Benson, assistant chief engineer.
- (2) Final location of track centers and mapping between Twin Peaks and Camp 3, in charge of Mr. J. F. Pfau, assistant engineer.
- (3) Design of structures, A. H. Perkins, chief engineer, and Mr. Pfau.
- (4) Superintendence of construction, all engineers.
- (5) Preliminary location of proposed new line from Dagupan to Camp 1 via San Fabian, and resurvey of present road from Twin Peaks to Dagupan via Camp 1, Pozorubio, and Magaldan, in charge of Mr. Storm.
- (6) Relocation of portion of road south of Twin Peaks, in charge of Mr. Franklin H. Drees, assistant engineer.
- (7) Gauging of the Bued River at Twin Peaks, Mr. Pfau.
- (8) Reconnaissance of the Agno River, Mr. Benson and Mr. Perkins.
- (9) Cement tests, office work, etc., all engineers.

DISCUSSION OF WORK.

(Numbers correspond to above.)

(1) The topography of the country along this location is the most rugged found anywhere along the entire line. Add to this the instability of the formation and the resulting slides, and we have the conditions for maximum expense for construction and location.

(2) It is proposed to make careful maps and profiles of the road as fast as the work of finishing and construction of masonry goes forward. These maps will be on a scale of 100 feet per inch, on separate sheets 24 by 36 inches. They will show existing structures and complete data for track laying. This work has been platted from Twin Peaks to Camp 3. The azimuths were checked by observations of Polaris and showed an error of but 2 feet.

(3) Your letter of instructions of April 16, 1904, contains the following:

" * * * Culverts and bridges of short span are to be of concrete, or, if good rock be convenient, of rubble masonry. It is contemplated that larger bridges shall be of steel when the road is completed. * * * "

Under these instructions several important structures have been designed and executed, as shown in the accompanying photograph. The cost of masonry has, however, been found to be so heavy on account of the high cost of cement, unskilled labor, and lack of labor-saving machinery that it has been decided to cut the masonry construction to the lowest possible point.

The rugged nature of the country make standards of less value than usual. Each problem has to be studied by itself and a separate solution found. This, with the low intelligence of the available labor and consequent necessity for careful inspection, throws more than the ordinary construction work on the engineer corps.

Photographs of some of the structures, under construction and after completion, follow this report.

(4) In the superintendence of construction this office confines itself to suggestions as to methods and defining the limits of work and to inspection. Skilled masons are impossible to secure in any numbers, and the absence (now being remedied) of machinery and appliances make this part of our work hard and the cost to the road large. However, with the constant watchfulness exercised by the officer in charge and every member of the engineer corps good results are now being attained in our masonry construction.

(5) When the fieldwork was nearly completed for this survey, Mr. Storm was taken sick. As a result the platting proceeded very slowly, being done at odd times. The work is now complete and a reduced map accompanies this report.

(7) Tracing attached.

(8) This work was ordered by the officer in charge for the purpose of ascertaining the availability of this stream for the development of power for the road. The work was still under way June 30.

(9) This item is self-explanatory, embracing all of the routine work of office and field, such as correspondence, setting grade and center stakes, and the many small items that occupy the larger part of one's time.

Illustrative of the difficulties of the work additional to those imposed by nature, the sand for the construction of the 32 foot arch, shown in the photograph later, was carried in sacks on the backs of natives out of the river bed—rather an expensive elevator and conveyer. The foreman, Mr. Cook, then ingeniously rigged up two cables and carriages, on which five natives rode down on one cable, pulling up by their weight five sacks of sand on the other cable. This worked very well and resulted in great saving. For some of the other work, men hauled sand up on a cable with ropes; for still other places bulls replaced the men. The hoisting engine now ordered will cheapen our masonry probably 50 per cent.

Among the problems demanding our attention in the immediate future are:

(1) The surveys for the power development. I am of the opinion that power will be developed most cheaply by pipe line from the falls near the mouth of Loakon Creek to the bench above the Horse Trail. At the latter point enters the west fork of the Bued River, which also looks favorable to the development of power.

(2) Location of the line from Camp 5 to Baguio. This must be pushed at our best speed.

(3) Final determination of the route to be adopted below Camp 1 to Dagupan and the final location of the line over the adopted route. The report and map of the preliminary surveys will be forwarded to you as soon as they are received from Manila, where they have been sent for blueprinting.

(4) The inauguration of a cost-keeping system. This will be of the greatest benefit to us and to the government in the prosecution of future work.

REPORT OF DISBURSING OFFICER, BENGUET ROAD.

BENGUET ROAD,
OFFICE OF THE DISBURSING OFFICER:
Twin Peaks, Benguet, P. I., August 26, 1904.

THE OFFICER IN CHARGE IMPROVEMENTS IN BENGUET PROVINCE.

SIR: I have the honor to render the following annual report for the period July 1, 1903, to June 30, 1904, as disbursing officer, Benguet road.

The financial records at this office do not extend back beyond November 20, 1903, the date of assumption of duty by the present disbursing officer, so that the following statement of receipts and expenditures is limited to the period from November 20, 1903, to June 30, 1904:

Total receipts and expenditures.

[Philippine currency]

Received from all sources.....	P 1,204,919.39
Disbursed.....	1,152,026.85
Balance due government June 30, 1904.....	52,892.54

VIEW ON BENGUET ROAD.

RETAINING WALL ON BENGUET ROAD.

RETAINING WALL ON BENGUET ROAD.

VIEW ON BENGUET ROAD.

A detailed statement of expenditures is hereto appended, marked "Exhibit A."

In addition to the expenditures shown in "Exhibit A," supplies and materials and property of all classes were purchased of the insular purchasing agent during the period July 1, 1903, to June 30, 1904, amounting to ₱165,823.12. This sum includes a uniform charge of 10 per cent for transportation for delivery of the supplies thus purchased at Dagupan, and settlement for the entire amount is made by the auditor and not by this office.

The records of this office show the average daily number of employees on the works (by months) for the period July 28, 1903, to June 30, 1904, to have been as follows:

Date.	Americans.	Japanese.	Chinos.	Filipinos.	Others.	Total.

REPORT OF THE PHILIPPINE COMMISSION.

BENGUET ROAD, OFFICE OF THE DISBURSING OFFICER,
Twin Peaks, P. I., September 26, 1904.

The OFFICER IN CHARGE IMPROVEMENTS IN BENGUET PROVINCE.

SIR: In compliance with instructions, I have the honor to submit herewith supplement to my annual report for the fiscal year ending June 30, 1904, covering the period July 1, 1904, to August 31, 1904:

Total receipts and expenditures.

[Philippine currency.]

Balance due government June 30, 1904.....	₱ 52, 892. 54
Received from all sources July 1 to August 31, 1904.....	303, 757. 12

Total.....	356, 649. 66
Disbursed July 1 to August 31, 1904.....	317, 691. 86

Balance due government August 31, 1904.....	38, 957. 80
---	-------------

A detailed statement of expenditures is hereto appended, marked "Exhibit A."

In addition to the expenditures shown in Exhibit A, supplies and materials and property of all classes were purchased of the insular purchasing agent during the period July 1 to August 31, 1904, amounting to ₱4,908.14. This sum includes a uniform charge of 10 per cent for transportation and delivery at Dagupan of the supplies thus purchased and settlement for the entire amount is made by the auditor and not by this office.

The records of this office show the average daily number of employees on the works for the period July 1 to August 31, 1904, to have been as follows:

REPORT OF PROPERTY OFFICER BENGUET ROAD.

OFFICE OF PROPERTY OFFICER BENGUET ROAD,
Twin Peaks, Benguet, P. I., July 15, 1904.

The OFFICER IN CHARGE IMPROVEMENTS IN BENGUET PROVINCE.

SIR: In accordance with instructions received from you on July 12, I have the honor to submit the following report covering the essential details of the operation of this department

for the period commencing December 12, 1903, the date on which I assumed charge, and ending June 30, 1904:

Upon taking over the department from my predecessor, Mr. J. J. Murphy, I found the office without any records of practical value, which fact has handicapped administration of the affairs of this department to a considerable extent and which makes it impracticable to state the total money value of property supplies purchased for use of the road during the period between July 1 and December 11, 1903.

Supplies, consisting of draft animals, blasting materials and tools, forage, medicines, and miscellaneous supplies, etc., to the respective values of ₱42,915, ₱85,433.12, and ₱105,460.22, a total of ₱233,808.34, have been purchased during the period covered by this report. These supplies have uniformly been of a satisfactory quality.

Delay has occasionally been experienced in the delivery of supplies purchased at Manila owing to the difficulties of transportation by bull train from Dagupan to Twin Peaks, a distance of more than 32 miles, and the more remote stations along the road, due to the distance traversed and the resultant hardship in a tropical climate to animals and wear and tear to wheel transportation. This has been minimized as much as possible by withdrawing animals from the trains as soon as they exhibit indications of overwork, putting them to pasture or stall-feeding them for a time, and then slaughtering and issuing them as the fresh beef component of the ration to employees of the road, and substituting the animals so slaughtered with new animals purchased under contract.

Supplies purchased at Manila by the purchasing agent of the road or furnished by the insular purchasing agent are consigned to the property officer. Upon arrival at Dagupan the supplies are taken up on the books of the agent of the road at that place, who is a bonded employee and who certifies to the receipt of the property. The property is then stored in the Dagupan warehouse pending transportation to the main warehouse at Twin Peaks. The Dagupan agent is required to accomplish bills of lading and make regular report of stores as they are received, but all invoices are accomplished at the main office by the property officer and no commercial bills for property furnished the road are paid until proper auditor forms have been accomplished by the property officer, who is required to render property returns to the auditor covering all transactions of this nature pertaining to the department.

The main warehouse at Twin Peaks is under the direct supervision of an assistant property officer, who receipts to the property officer for all supplies arriving from Dagupan or turned in after serving their purpose at camps on the road. There are also two other warehouses, each under the direct supervision of assistant property officers, who receive their instructions from the property officer at Twin Peaks. One is situated about 3½ miles and the other about 6½ miles from Twin Peaks. These warehouses are used as distributing points for camps in such sections. Supplies are forwarded to these warehouses from the main warehouse at Twin Peaks and are then issued on approved local requisitions to responsible foremen and others authorized to draw property. In all cases memorandum receipts are taken for the property issued, whether of an expendable or nonexpendable nature.

Property lost, as well as property rendered unserviceable through service on the road, is acted upon by the committee appointed under the provisions of Act No. 215, Philippine Commission.

The following force of employees is necessary for the proper transaction of the work of this department:

At Twin Peaks.—In executive office: One head of department; 1 abstract and return clerk; 1 requisition and voucher clerk; 1 native clerk, for typewriting and copying; 1 office boy. In warehouse: One assistant property officer; 1 bookkeeper; 1 stock clerk; 4 warehouse laborers (natives). At Camp No. 3: One assistant property officer; 1 general clerk; 2 warehouse laborers (natives). At Camp No. 4: One assistant property officer; 1 general clerk; 4 warehouse laborers (natives).

Of the force employed at Camps Nos. 3 and 4 one-half of the salary of such employees is charged to the commissary department, as such employees handle commissaries and property jointly in one warehouse, under one bonded assistant representing both departments at each place.

The property officer is bonded to the civil government in the sum of \$10,000 United States currency, and all assistant property officers in the sum of \$5,000 United States currency, for the proper accounting of public civil property for which they are accountable or responsible, respectively.

Very respectfully,

L. F. HENRY,
Property Officer Benguet Road.

REPORT OF PROPERTY OFFICER BENGUET ROAD.

OFFICE OF PROPERTY OFFICER BENGUET ROAD,
Twin Peaks, Benguet, P. I., September 22, 1904.

The OFFICER IN CHARGE IMPROVEMENTS IN BENGUET PROVINCE.

SIR: In compliance with the request contained in your letter of the 19th instant, I have the honor to submit the following report covering transactions pertaining to this department for the period from July 1 to August 31, 1904; this report being supplemental to the annual report recently submitted for the period ending June 30, 1904.

Supplies consisting of bullocks to the value of ₱28,765; blasting materials to the value of ₱29,200; and tools, forage, medicines, and miscellaneous, to the value of ₱12,493, have been purchased from commercial firms; and blasting materials to the value of ₱660, and tools, forage, medicines and miscellaneous, to the value of ₱4,251.54, have been purchased from the insular purchasing agent at Manila during the period specified. These figures exhibit a total expenditure of ₱75,369.79 for property supplies purchased for this department during the months of July and August, 1904.

No departure has been made from the system set forth in the former report for administering the affairs of the department.

Since submission of the last report 6 Japanese laborers have been employed in constructing hemp shoes for the draft bullocks used in the service of the road, for transportation purposes. The cost of construction of these shoes is reasonable, and the adoption of this method of protecting the animals' hoofs has met with excellent results.

In order to provide adequate wheel transportation for conveying supplies to distant stations recently opened to this class of transportation through rapid progress in extension of the road, it has been found necessary to order the construction of 25 additional bull carts. These carts will be of a similar pattern to some already in use on the road; they are constructed of good material, are adapted to the work, and their cost is only ₱50 each.

Very respectfully,

L. F. HENEY, *Property Officer.*

REPORT OF COMMISSARY OFFICER BENGUET ROAD.

OFFICE OF THE COMMISSARY OFFICER,
Twin Peaks, Benguet, P. I., August 1, 1904.

The OFFICER IN CHARGE IMPROVEMENTS IN BENGUET PROVINCE.

(Through disbursing officer Benguet road.)

SIR: In compliance with verbal instructions from the officer in charge, I have the honor to submit the following report of operations of the subsistence department Benguet road for the fiscal year ending June 30, 1904.

This report commences with the transfer made by N. M. Holmes to J. H. Hazeltine, dated August 21, 1903. There are no records in this office for the period July 1 to August 20, 1903.

Date.	Articles.	Stores.	Cattle.
1903, Aug. 21	Value of supplies transferred by N. M. Holmes.....	₱45,030.54	₱6,600.00
1904, June 30	Value of supplies purchased to include June 30, 1904.....	213,069.98	119,359.59
30	Total to be accounted for.....	258,100.52	125,959.59
30	Value of supplies issued to include June 30, 1904.....	184,329.80	117,042.59
30	Value of supplies sold for cash to include June 30, 1904.....	3,716.92	
30	Value of beef hides sold.....		1,792.00
30	Value of supplies remaining on hand.....	70,053.80	7,125.00
	Total.....	258,100.52	125,959.59

The progress of the road made necessary the establishment of a commissary at Camp No. 3 October 21, 1903, and at Camp No. 4 on April 1, 1904, distant from Twin Peaks 3½ and 6½ miles, respectively.

There has been no known dissatisfaction with the class of supplies furnished, which have been uniformly of good quality with no appreciable loss on account of damaged or unserviceable stores.

Very respectfully,

E. F. AMBROSE, *Commissary Officer.*

OFFICE OF THE COMMISSARY OFFICER,
Twin Peaks, Benguet, P. I., September 26, 1904.

The OFFICER IN CHARGE IMPROVEMENTS IN BENGUET PROVINCE.

SIR: In compliance with instructions of the officer in charge, I have the honor to submit the following report of operations of the subsistence department Benguet road for the months of July and August, 1904:

Date.	Articles.	Stores.	Cattle.
1904.			
June 30	Value of supplies on hand.....	P 70,053.80	P 7,125.00
Aug. 31	Value of supplies purchased to include Aug. 31, 1904.....	17,690.44	32,554.00
31	Total to be accounted for.....	87,744.24	39,679.00
31	Value of supplies issued to include Aug. 31.....	37,483.98	36,186.50
31	Value of supplies sold to include Aug. 31.....	1,667.78	492.50
31	Value of beef hides sold.....	48,592.48	3,000.00
31	Value of supplies remaining on hand.....		
	Total.....	87,744.24	39,679.00

Very respectfully,

E. F. AMBROSE,
Commissary Officer.

REPORT OF THE CHIEF SURGEON, BENGUET ROAD.

BASE HOSPITAL,
Balangabang, P. I., September 7, 1904.

L. W. V. KENNON,
Major, Tenth U. S. Infantry, Officer in Charge.

SIR: I have the honor to state in submitting this the annual report of the medical department of the Benguet road, that I regret that it is not possible to render a full report covering the fiscal year of 1903.

I was not appointed chief surgeon of the road until October 13, 1903, and I find it impossible to include the months of July, August, and September, 1903, for the reason that during the time Dr. H. A. Lindley was road surgeon, under the administration of N. M. Holmes, very few records were kept in this department, and even these few are in such a condition as to be useless for statistical purposes.

From October 1, 1903, until June 30, 1904, the time covered by this report, the road has been under construction and the mechanics and laborers have been distributed from Camp 1, 5 miles below Balangabang, to Camp Dowd, a distance of 15 miles.

The character of the work being necessarily dangerous from working on high cliffs, falling rock, landslides and the constant use of immense quantities of giant powder and dynamite, not to mention the continuous exposure the men have to undergo from the tropical sun in the dry season, and the wet and cold during the rainy season, while living in improvised temporary quarters, the difficult task of supplying the necessary medical and surgical attention required for their relief and safety, can be readily understood. To add to this the fact that many of the laborers are unfortunately of a class that have no idea of hygiene or sanitation, and that many others fail to provide themselves with sufficient clothing to keep them warm at night, the amount of sickness exhibited by the following tables will not be at all surprising.

SANITATION.

The question of sanitation has been a difficult one to handle in many respects for various reasons. A large number of the men both neglect and refuse to drink boiled water, and it is almost impossible to prevent the oriental classes from overcrowding their quarters. The Japanese bathe too often and the Chinese and Filipinos too seldom, and all three classes insist on eating all kinds of uncooked fruit, vegetables, and canned food. The sanitary conditions of the various camps and quarters, which are in charge of the camp foreman, and under supervision of the medical department, is good, but, as many of the laborers live in their own shacks, it is impossible to regulate their mode of life or habits.

FOOD AND RATIONS.

The quantity of food furnished by the road for subsistence is quite sufficient for all demands, and the variety and quality are first class. The cooking and preparation of the

food are as good as could be expected under the circumstances, and if the men would confine themselves to the regular rations issued and not indulge in and consume so much truck purchased on the outside much sickness would be prevented.

HOSPITAL AND MEDICAL STATIONS.

During the time covered by this report there have been 4 hospitals located at various places on the road. At Balangabang the Base Hospital, with a capacity of 30 beds, has been in operation the entire time. An 8-bed hospital was located from October 1, 1903, until May 20, 1904, at Camp 3. Since that date there has been a medical station at this camp with a hospital attendant in charge. At Camp 4 a 6-bed hospital was established October 1, 1903, and enlarged to 10 beds on February 1, 1904. At Camp Dowd, 3 miles above Camp 4, an 8-bed hospital was located on May 20, 1904, and has been in operation since that time. Medical stations, with hospital attendants in charge, have been located at Camp 1½, Camp Sub 4, and other places as necessity required. As the men are charged a certain rate per day for their food if they do not work when not sick, it is necessary to station a hospital attendant at each camp to examine their condition and report the same to the surgeon in charge. Besides, it has been found a necessity to have a member of the medical corps on hand or near by to where any considerable number of men are working, to render aid in case of accident.

MEDICAL CORPS.

Until January 1, 1904, a chief surgeon and one assistant surgeon were employed. As the men became distributed over a greater distance, and as the road was frequently blocked and impassable for several days at a time, it was found necessary to employ more surgeons for the safety of the men in case of accident, and two additional assistant surgeons were secured; so that at the present time there is one chief surgeon and three assistant surgeons. There have been two hospital stewards on duty since October, and the number of hospital attendants employed since that date has varied from time to time from 7 to 10, as the demands of the work required. The respective salaries of the members of the medical corps are as follows: Chief surgeon, \$2,000; two assistant surgeons, \$1,800; one assistant surgeon, \$1,500; hospital stewards, \$900, and hospital attendants, \$720 gold per annum. It seems absolutely impossible to get along with any smaller medical force than the present one, for the reason that the amount of work in this department is continually increasing, and in case of sickness among the surgeons or corps men the department would be rendered inefficient.

INFECTIOUS AND CONTAGIOUS DISEASES.

During the month of November, 1903, Asiatic cholera made its appearance in the most pernicious form, from which one American and four Japanese died. As all the cases were isolated as soon as discovered and kept under strict quarantine regulations, no new ones developed and the disease disappeared.

On February 14, 1904, a case of variola was discovered at Camp 3, in a Filipino, who was isolated at once. Vaccine virus was promptly secured from the board of health at Manila, and 3,240 employees and residents on the road were vaccinated inside of five days from the time the case was located. The man recovered, and no other cases developed.

EMPLOYEES OF THE ROAD.

In the following tables, which give the total number of employees that have worked on the road from October 1, 1903, until June 30, 1904, in a classified form according to nationality, those classed as Americans include Americans, American negroes, English, Australians, and white Europeans. As this grouping or classification is used in all the departments on the road to simplify matters for business purposes, I have not been able to arrange them differently in my tables, which I greatly desired to do in order to be able to arrive at more correct conclusions.

Employees of the road.

Americans	3,554
Chinese	2,234
Japanese	4,558
Filipinos	10,038
Total	20,384

Wounds.....	554	416	722	1,162	2,854
Ulcers.....	163	374	444	980	1,961
Beriberi.....		20	81	142	243
Miscellaneous.....	854	224	1,226	1,260	3,564
Total.....	3,208	1,550	4,801	5,209	14,768

Deaths, and principal causes.

Disease.	Ameri- cans.	Chinese.	Japanese.	Filipinos.	Total.
Dysentery.....			29	15	44
Malaria, pernicious.....			9	5	14
Beriberi.....		8	13	18	39
Accidents.....	4	1	4	4	13
Bronchitis, capillary.....		1	2	5	8
Pneumonia.....				9	9
Opium poisoning.....		6			6
Cholera.....	1		4		5
Miscellaneous.....	3	5	8	18	34
Total.....	8	21	69	74	172

Relative percentage of employees.

	Per cent.
Americans.....	17.5
Chinese.....	11.0
Japanese.....	22.5
Filipinos.....	49.0

Relative percentage of cases.

	Per cent.
Americans.....	21.5
Chinese.....	10.5
Japanese.....	32.5
Filipinos.....	35.5

Death rate, per 1,000.

Americans.....	2.25
Chinese.....	9.40
Japanese.....	15.15
Filipinos.....	7.30
Average.....	8.52

REMARKS.

An inspection of the foregoing tables will show that, when the employees of the road are compared according to nationality as classified, that those classed as Americans (which class includes Americans, American negroes, English, Australians, and white Europeans), while only numbering 17.5 per cent of the total, have produced 21.5 per cent of the number of cases of sickness and accidents, and suffered a loss by death at the rate of 2.25 per cent per 1,000.

The Chinese, who furnished 11 per cent of the employees, supplied 10.5 per cent of the cases of sickness, and have a death rate of 9.4 per cent per 1,000.

The Japanese, with 22.5 per cent of laborers to their credit, have produced 32.5 per cent of the cases of sickness, and suffered a death rate of 15.15 per cent per 1,000.

The Filipinos, who have supplied the road with 49 per cent of its employees, have furnished 35.5 per cent of the sick cases, and have a death rate of 7.3 per cent per 1,000.

It will be seen from this that the Americans, Chinese, and Japanese are all below the average as regards the number of employees furnished the road, and that the Filipinos are far above it, having supplied almost half the total number.

As regards the number of cases of sickness produced by each class, the Americans and Chinese are below, and the Japanese and Filipinos above the mean average; but when the proportion of employees furnished by each class is taken into account, it will readily be seen that the Japanese have produced the greatest percentage of sick cases, followed by the Americans and Chinese, in the order named, while the Filipinos have furnished by far the least percentage.

Very respectfully,

J. W. MADARA,
Chief Surgeon, Benguet Road.

BASE HOSPITAL,
Balangabang, P. I., September 23, 1904.

L. W. V. KENNON,
Major, Tenth Infantry, U. S. Army, in Charge.

SIR: In compliance with instructions from your office of recent date, I have the honor to submit the following report of the medical department of the Benguet road for the months of July and August of the present year, as a supplement to the annual report for the fiscal year of 1903.

Since June 30, 1904, work on the road having been extended several miles farther up the canyon, and three new camps established, it has been necessary to station hospital attendants at each of these camps; so that at present time hospitals, with surgeons in charge, are located at Balangabang Camp 4 and Camp Dowd, and medical stations, with hospital attendants in charge, at Camp 3, Camp Boyd, Camp Hann, Camp Reed, and Colgan.

The administration of the medical department has not been altered in any way, nor has the general demands of the road upon this department varied or changed materially since the annual report was submitted; hence, the conditions and facts set forth in the former will apply largely to this one.

The following tables are intended to exhibit the facts as regards the number and percentage of employees, cases of sickness, death rate, etc., in the most concise form:

Employees of road.

Americans.....	973
Chinese.....	633
Japanese.....	1,667
Filipinos.....	2,394
Total.....	5,667

Relative percentage of employees.

	Per cent.
Americans.....	17.2
Chinese.....	11.2
Japanese.....	29.4
Filipinos.....	42.2

Principal diseases classified.

Disease.	Americans.	Chinese.	Japanese.	Filipinos.	Total.
Dysentery.....	24	3	78	30	132
Diarrhea.....	98	116	226	115	442
Malaria.....	223	1	397	305	1,041
Fractures.....	2	6	6	1	10

Beriberi.....		5	3	5	13
Accidents.....	4		8		12
Pneumonia.....				1	1
Opium poisoning.....		2			2
Abscess of liver.....			1		1
Miscellaneous.....		2	4	1	7
Total.....	4	9	28	9	50

Death rate, per 1,000.

Americans.....	4.21
Chinese.....	14.21
Japanese.....	16.79
Filipinos.....	3.75
Average.....	8.82

REMARKS.

It will be noticed that the relative percentage of employees on the road varies but slightly from that of the former report. The Americans and Chinese are practically the same, while the Japanese have increased and the Filipinos decreased 7 per cent.

As regards the relative percentage of cases furnished by each class, it will be seen that the Chinese are the same, while the Filipinos have decreased $2\frac{1}{2}$ per cent. The Americans and Japanese have both increased, the former $2\frac{1}{2}$ and the latter $3\frac{1}{2}$ per cent.

A glance at the relative death rate will show that while the Filipinos decreased slightly, all the other have increased. An inspection of the table of deaths and principal causes will show just why this is so.

Very respectfully,

J. W. MADARA,
Chief Surgeon, Benguet Road.

SUPPLEMENTARY REPORT FOR JULY AND AUGUST, 1904.

The honorable the SECRETARY OF COMMERCE AND POLICE,
Manila, P. I.

SIR: I have the honor to submit the following brief report of work accomplished during the months of July and August, 1904.

ROAD CONSTRUCTION.

Vigan-Bangued Road, province of Ilocos Sur.—An additional appropriation of ₱14,700 was provided for by Act 1192, dated July 15, 1904, for the purpose of constructing the bridges between San Quentin and Bangued. Upon completion of the Abra River survey Mr. Wheeler resumed his work as superintendent, about September 1, 1904.

Capas-O'Donnell-Iba Road, provinces of Tarlac and Zambales.—Mr. Keys resigned the superintendency of this road on account of continued poor health, August 10, 1904. He was succeeded by Mr. H. Thurber, by transfer from the supervisorship of Bulacan.

Pagbilao-Antimonan Road, Tayabas Province.—Mr. J. G. Vogelgesang was fatally injured while in the discharge of his duties, August 4, 1904. The chief clerk, Mr. J. R. Miner, was detailed to the position of acting superintendent.

Carcar-Barila road, Sogod-Putad road, Cebu Province.—Mr. H. C. De Lano, supervisor and superintendent of these roads, was transferred to the improvement of the port, Manila, P. I., July 16, 1904, and Mr. T. W. Allen was appointed supervisor and is now in charge of road construction.

A recent request from the provincial officers for the transfer of the funds appropriated for the Sogod-Putad road to the construction of a road across the central part of the island from Cebu to Toldeo has been referred to this office and is under consideration.

Padre Juan Villaverde Trail, province of Nueva Vizcaya.—Mr. Bennett resigned the superintendency of this road August 17, 1904; Mr. L. W. Wilson, his assistant, was placed in charge. Mr. Wilson is now confined in the civil hospital, and Mr. Nipps, acting supervisor Nueva Vizcaya, is temporarily in charge of the work.

No changes of importance have occurred on the other roads under prosecution.

The following tabulation shows the approximate expenditures on these various roads now under construction:

^a In progress.

HARBOR WORK UNDER CONTRACT.

Field and inspection parties for the harbor improvement of Cebu and Iloilo are being organized. It will be necessary to start field work at Iloilo early in October.

The temporary timber wharf, Cebu, will be completed about October 1. Additional to the amount provided for by act No. 1020, dated December 4, 1903, about P7,000 will be required to complete this structure, making a total cost of about P47,000—a sum well within the amount authorized for this purpose by resolution of the Commission dated September 25, 1903.

The following tabulation shows the principal authorized miscellaneous surveys and investigations in progress during the months of July and August:

Nature of work.	Province.	Date of authorization.	Field work commenced.	Chief of field party.	Approximate expenditures, July and August.
Ship canal ^a	Tayabas.....	Nov. 30, 1903	^b July 6, 1904	Max Dobbins.....

Do. ^c	Tarlac.....	Sept. 1, 1903	Aug. 3, 1904	W. G. Hunter.....	1,071

^a To be taken up with the Balanacan-Boac road survey.

^b Assigned.

^c In progress.

Routine work has occupied the time of the various divisions. It will be necessary to decrease the number of survey parties now engaged in field work, on account of funds available through the provisions of act 1225; however, authorized surveys will be well in hand upon the completion of the field work now in progress, and it appears that the force provided for can meet all ordinary requirements placed upon it.

PROVINCIAL WORK.

The first annual meeting of the provincial supervisors was held in Manila August 15 to 20, inclusive.

Compilation of the papers presented at this meeting is in progress, and will be submitted in the near future with a request for an authorization of a similar meeting early in the next fiscal year.

Provincial records received for the months of July and August show no special features.

The following tabulation shows an approximate statement of expenditures up to September 1; the proportional expenditures for two months are ₱35,333.33.

Money statement for July and August, 1904.

	Contingent expenses.	Public works.	Salaries and wages.
Appropriation act 1225 (July 1, 1904)	₱14,000.00	₱40,000.00	₱158,000.00

Total amount available September 1			178,496.60

Respectfully submitted.

J. W. BEARDSLEY,
Consulting Engineer to the Commission.

MANILA, P. I., October 5, 1904.

ANNUAL REPORT OF THE BUREAU OF POSTS OF THE PHILIPPINE ISLANDS.

OFFICE OF THE DIRECTOR OF POSTS,
Manila, P. I., September 14, 1904.

The honorable the SECRETARY OF COMMERCE AND POLICE.

SIR: I have the honor to submit herewith the following as my fourth annual report of the bureau of posts, the same being for the fiscal year ending June 30, 1904. The statistical tables herewith will give detailed information covering all branches of the postal service. The information relative to revenues and expenditures is given as obtained from the auditor.

PERSONNEL OF THE SERVICE.

The employees of this bureau at the commencement of the fiscal year were as follows: Postmasters, 148 Americans and 66 Filipinos; clerks in post-offices, 64 Americans, 70 Filipinos, and 1 Chinese; officers and clerks, office director of posts, 17 Americans and 6 Filipinos; making a total of 229 Americans, 142 Filipinos, and 1 Chinese.

During the year 4 Americans and 6 Filipinos were appointed by reinstatement, 9 Americans and 3 Filipinos by transfer from other bureaus of the government, 24 Americans and 18 Filipinos from certifications of the civil-service board, 79 Americans and 305 Filipinos not in the classified service, and 11 Americans by transfer from the United States postal service.

During the year 8 Americans were separated by transfer to other bureaus; 18 Americans and 4 Filipinos in the classified service by resignation; 117 Americans and 74 Filipinos filling unclassified positions by resignation; 12 Americans and 5 Filipinos in the classified service by removal; 1 American and 16 Filipinos in the unclassified service by removal; and 2 Americans and 2 Filipinos by death.

The officers, clerks, and employees of this bureau at the close of the fiscal year were as follows: Postmasters, 102 Americans and 287 Filipinos; clerks in post-offices, 72 Americans, 84 Filipinos, and 1 Chinese; officers and clerks in the bureau of posts, 23 Americans and 8 Filipinos, making a total of 577.

REVENUES AND EXPENDITURES.

Complete statistics relative to revenues and expenditures are not obtainable at this time, as the audit of postmasters' accounts to the auditor has not been completed. There is a falling off in revenues during the first half of the fiscal year, which, if continued through the balance of the year, will reduce the revenues to about ₱267,000 for the year.

The expenditures for the fiscal year for all purposes will amount to about ₱514,190, or an increase of ₱46,225 over the preceding year. In addition to this the public printer furnished this bureau with printing and binding to the value of ₱25,926.34. Of this increase ₱38,000 were for inland mail transportation and about ₱5,000 for traveling expenses of post-office inspectors.

Complete statistics covering revenues and expenditures will be furnished as soon as obtainable from the auditor.

DEAD-LETTER OFFICE.

Reference to Tables F, G, and H will furnish very complete information regarding this department. These tables show that during the year a total of 39,143 pieces of mail were received in the dead-letter office, which for any cause could not be delivered to addressees. This is a decrease of 3,969 over the preceding year.

The number of pieces of unclaimed matter received in the dead-letter office and subsequently returned for delivery to the senders in the United States is one-half less than for the year 1903, but on the other hand there was an increase of 2,338 in the number of pieces destroyed because of inability to make delivery to addressee or return to the sender.

During the year money amounting to ₱18.86, taken from letters the senders of which could not be found, was turned into the postal revenues after being held one year. At the close of the year 28 letters containing \$76.20 United States currency and ₱10.05 Mexican currency, and various money orders, drafts, and bills of exchange, remained in the dead-letter office, the senders not having been found. The proceeds of such of these as are held one year will be converted into the postal revenues.

MONEY-ORDER BUSINESS.

At the commencement of the fiscal year the money-order business was in operation at but 33 offices. During the year it was extended to 30 additional offices, so that, with but one exception, the money-order business is now in operation at each provincial capital. Statistics covering this branch of the work are not complete at this time.

At the Manila post-office 26,294 orders were issued, aggregating \$1,358,436.40. This is an increase of 3,157 orders over the preceding year. Reports so far as completed show a material increase at many of the other money-order offices in the islands.

The money-order system is still used largely for remittances of money to the United States. Money-order post-offices in the United States paid during the year orders issued in the Philippines to the amount of \$1,447,077.79, while during the same period postmasters in the Philippines paid money orders issued in the United States to the amount of \$103,683.32. In partial settlement of our accounts with the United States, to balance the difference between the amount of United States orders paid in the Philippines and Philippine orders paid in the United States, \$2,000,000 were deposited with the treasurer of the Philippine Islands to the credit of the United States Government.

There is a continual demand for further extension of the money-order business to the smaller places in the provinces. Such requests

are acted upon favorably whenever there is reason to believe that the amount of business to be obtained will justify this action.

The acceptance of Mexican or Spanish-Filipino currency for the purchase of money orders was discontinued September 1, 1903. This action had a tendency for a time to reduce the money-order business, but was taken after consultation with the civil governor on the ground that by discontinuing the handling of Spanish-Filipino and Mexican currency in the money-order business we would materially effect the transmission of these kinds of money from place to place throughout the islands, and thus render much assistance to the introduction of the new Philippine currency. During the previous fiscal year there was a profit of \$2,545.77 on the Mexican and Spanish-Filipino currency handled in the money-order business, caused by the different rates of exchange. The profits from the same source for the two months ending September 1 amounted to \$399.28.

Negotiations were again opened during the year for the inauguration of money-order exchanges between the Philippines, Singapore, Hongkong, and Japan, but so far we have been unable to agree upon the terms for the money-order conventions proposed, and hence arrangements are as yet incomplete.

REGISTRY BUSINESS.

Table K furnishes very complete information relative to the registry system. During the year 90,775 letters and 52,896 packages, upon which postage and registry fee were paid by stamps, were registered. The official registered mail for the year amounted to 43,823. Postmasters during the year received 99,819 registered letters and 97,020 parcels for delivery at their respective offices, and handled 101,414 pieces of registered mail in transit.

These figures show an increase of 17,109 in the number of letters registered, but a decrease of 10,935 in the number of parcels registered during the preceding year. The reduction in the number of parcels registered is explained by the order of the President of the United States discontinuing the privilege of Government employees sending gifts in the mails to the United States free of customs duties. This order became effective with mails arriving in the United States April 1, 1904.

There was also an increase of 16,578 in the number of pieces of official mail registered free. Officials of the insular government are very free to make use of the privilege of free registration conferred by Act 179 of the Philippine Commission. The work of this bureau is materially increased on this account, and it is believed that much of the matter sent in the registered mail by officials of the government might just as well be sent as ordinary mail.

The Government of the United States reimburses the senders of registered first-class mail lost while in the custody of the Post-Office Department for the value thereof, but not to exceed \$25 United States currency. Similar legislation has not as yet been enacted in the Philippine Islands, nor has it been recommended. The conditions here have, in my judgment, been too unsettled to justify the government guaranteeing indemnity for the value of lost registered mail. We do, however, undertake to collect from the bondsmen of

a postmaster or postal employee responsible for the loss of a registered article for the value of the contents. In this we have succeeded except in a few cases of postmasters bonded in the Union Surety and Guaranty Company, which company passed into the hands of a receiver before sufficient evidence of losses to justify demands upon the company could be made.

INTERISLAND MAIL TRANSPORTATION.

Interisland mail communication has been very materially improved during this year. In addition to quite regular service to a number of important points in the islands furnished by commercial steamers, the interisland army transports have been operated on more regular schedules than heretofore. The service of the coast-guard steamers, started just prior to the beginning of the fiscal year, has been very regular. Postal clerks, for the distribution of mail on board, were maintained on steamers of the coast-guard service. These clerks distributed during the year 504,850 letters and 208,500 pieces of other classes of mail matter. They also handled 9,977 pieces of registered mail. The total distance traveled by these clerks during the year was 182,685 miles.

Postal clerks are also operated upon the main line of the Manila and Dagupan Railway. These clerks distributed during the year 1,529,350 letters and 492,600 pieces of other mail. They also handled 15,043 registered articles and traveled 89,149 miles.

With a view to securing more definite information as to the weight of mails carried on the interisland service, all the principal post-offices in the islands were required to take the weight of all mails received or dispatched during the month of June.

These reports show that during this month the Manila post-office dispatched 3,259 pounds to ports on Laguna de Bay and received 738 pounds by means of army transport service boats, and dispatched 7,649 pounds and received 3,897 pounds by means of commercial boats. During the same month 3,207 pounds were dispatched to points on Manila Bay by means of naval boats and 3,286 pounds were received; 1,521 pounds were dispatched by means of the army transport service boats and 534 pounds were received; 3,830 pounds were dispatched by commercial boats and 1,235 pounds were received.

To other interisland points 10,927 pounds were dispatched and 4,738 pounds received by means of army transport service steamers; 17,964 pounds dispatched and 2,407 pounds received on cutters of the coast-guard service; 33,368 pounds were dispatched and 9,573 pounds were received on commercial steamers. Twelve thousand eight hundred and ninety-seven pounds were dispatched on the Manila and Dagupan Railway and 4,489 pounds were received from this line during the month of June.

These figures will show that more mail was received and dispatched at Manila by means of commercial steamers than on all classes of government transportation combined. Table M shows the number of mails received by and dispatched from the Manila post-office during the fiscal year, and Table K furnishes the same information relative to the other offices.

The inland transportation of mails has been materially extended and improved during the year. Tables E-1 and E-2 give complete

detailed information covering this subject. Prior to the close of the fiscal year this bureau had taken over complete charge of the transportation of mails between post-offices except in seven provinces. The transportation in these provinces will be taken up early in the fiscal year 1905.

MAIL COMMUNICATION WITH THE UNITED STATES AND FOREIGN COUNTRIES.

Table C shows the amount paid to each commercial steamer carrying mails to foreign ports. Table D shows the amount paid to the several foreign countries for the transportation of Philippine mails for the calendar year ending December 31, 1903. Tables N, O, and P give detailed information relative to mails exchanged by the Manila post-office with the United States, Honolulu, Guam, and United States ships in foreign ports, and with foreign countries.

From these tables it will be seen that during the year 59 mails were received from the United States, 17 by army transport and 42 by commercial liner via Hongkong or Nagasaki. They also show that 66 mails were dispatched to the United States, 14 by army transport and 52 by commercial liner via Yokohama, Nagasaki, or Hongkong. This is an average of one mail from the United States every six days and of a mail to the United States every five days.

This was an increase of 215 in the number of pouches of letters received from the United States, of 14 in the number of pouches of registers received, and a decrease of 544 in the number of sacks of paper mail received, and in mails dispatched to the United States there was a decrease of 340 pouches of letters, of 721 pouches of registered mail, and an increase of 1,096 sacks of paper mail over the preceding year.

Statistics relative to mails exchanged with foreign countries show a decrease of 33 mails received and an increase of 41 mails dispatched during the year, while there was an increase of 204,959 grams of letters and 1,620,121 grams of prints in the weight dispatched.

EXTENSIONS AND IMPROVEMENTS.

On July 1, 1903, there were but 213 established post-offices. During the year 179 new offices were established, 21 discontinued, and 20 reestablished, so that at the close of the year we had 391 post-offices. The intention is to establish a post-office at the seat of government in each organized municipality, and at such other places in the islands as may be necessary for the proper handling of the mails. This work was completed during the year in a number of provinces, but there remain other provinces in which as yet only a few post-offices have been established. We have pushed the work of establishing new post-offices and organizing as rapidly as the force of post-office inspectors permitted. The action of the Philippine Commission in limiting the number of post-offices that may be established during the fiscal year 1905 to 450 will make it impossible to complete this work during the current year, but it will be continued and offices established at the more important places until the maximum number allowed are in operation.

The Manila post-office was moved from the old location on the Escolta to the Fortin Building just before the close of the year. The

new quarters give more than double the working space for the handling and distribution of mails, as well as provide a larger and more convenient lobby for the use of the public. The new location on the south side of the Pasig River, between the Santa Cruz Bridge and the Bridge of Spain, is no doubt highly satisfactory to the public in general. The post-office is now in perhaps the most accessible place in the city, and with very few exceptions more convenient to everybody than it was at the old location.

The incoming mails are now delivered by launch at the back door of the post-office, and many of the outgoing mails are dispatched from the post-office direct to launches. This arrangement not only saves considerable labor, but secures a much quicker delivery of mails to the post-office and enables a later closing of outgoing mails than heretofore.

During the year two automatic postmarking and backstamping machines were installed in the Manila post-office. These machines materially expedite the handling of large mails, and at the same time perform the work of postmarking letters and canceling postage stamps and back stamping the incoming mail in a much more satisfactory manner than it can be done by hand.

The postal station which was established in the Manila custom-house was closed when the post-office was moved to the Fortin Building, and the assessment and collection of duties on mail packages, with the exception of those for regular importers, is now done at the main post-office by officers of the customs service.

The free-delivery service in the city of Manila continues to grow in popularity, notwithstanding the fact that during the month of May two of the carriers were arrested for robbing or tampering with the mails, and have since been convicted for the crimes committed.

The amount of postage collected in Manila from publishers and news agents, on publications admitted to the mails at second-class rates of postage, will amount to about ₱5,640, which is ₱395 less than was collected for the same purpose in the preceding year.

On February 21, 1903, the Postmaster-General of the United States issued an order to the effect that the provisions of the parcels-post conventions in force between the United States and other countries and colonies shall be held to apply to parcels for and from the Philippines, as well as to parcels for and from other parts of the United States. This gives the Philippine Islands the benefit of the parcels-post conventions of the United States with Germany, Mexico, and many of the South American countries.

On November 21, 1903, a parcels-post convention was concluded at Washington between the United States and Hongkong, and on July 1, 1904, a similar convention was concluded with Japan. These later conventions enable the postal administration of the Philippine Islands to exchange parcels with Hongkong and Japan up to a limit of 4 pounds 6 ounces in weight, and not exceeding \$50 United States currency in value.

CONCLUSION.

The acceptance of the United States postage stamps not overprinted "Philippines," and sold at United States post-offices, when mailed in the Philippines, and the acceptance of "Philippine" postage stamps on matter mailed in the United States, was dis-

continued October 1, 1903. This action was taken on protest of the United States Government because of the large amount of Philippine postage stamps used on mail matter deposited in United States post-offices. The discontinuance of this interchangeability worked little, if any, hardship upon any one. United States postage stamps were, by order of the Postmaster-General, acceptable for postage on matter mailed in the Philippines shortly after the American occupation, and at a time when there were but few post-offices in the islands, and little opportunity to purchase postage stamps outside of Manila or the larger military posts. With the establishment of a complete postal service throughout the islands, this arrangement was no longer necessary, and was therefore discontinued.

The plan of appointing Filipinos as postmasters at the smaller offices has continued during the year, even to the extent of making such appointments at the less important provincial capitals where the money-order business is transacted. These postmasters, as a rule, render very satisfactory service after they are given complete instructions. In fact, the Filipino postmasters cause this office less correspondence on the whole than do the American postmasters at the smaller offices. Furthermore, the insular auditor has several times informed me that the postal accounts of the Filipino postmasters are rendered in a more satisfactory manner than those of the American postmasters at the same class offices. These facts tend to verify the statement made in my last report, that as a general rule the Americans in the employ of other branches of the Government service sought and accepted appointments as postmasters to advance their personal interests, and not with a view of rendering satisfactory service.

The work of the clerks and employees in the post-office service has on the whole been highly satisfactory, and their duties have been performed with little or no complaint, notwithstanding the fact that by the provisions of Act 1040 their hours of labor were materially increased. This law requires six and one-half hours service each working day, but in the post-office service practically every employee is required to labor Saturday afternoons, Sundays and holidays. The minimum number of hours of labor required of a post-office clerk in the Manila post-office is 2,280 per annum, while in other offices the clerks who enjoy Saturday afternoons, Sundays, and holidays off duty, will perform but 1,892 hours.

At the time this act was under consideration prior to its passage, attention was called to the injustice that it would work on post-office clerks, and special provision for these clerks was requested, but was denied. In my judgment the law should permit the heads of bureaus to fix the hours of labor of clerks and employees required to perform Saturday afternoon, Sunday, and holiday service, so that the aggregate number of hours required in any one week or month will be no greater than for those who are exempt from duty at such times.

Even then a position requiring daily service and at irregular hours will not be as desirable as other positions with Saturday afternoons, Sundays, and holidays off duty.

Respectfully submitted.

C. M. COTTERMAN,
Director of Posts.

CONTENTS OF TABLES.

**ANNUAL REPORT OF THE BUREAU OF PRISONS, FOR YEAR
ENDING JUNE 30, 1904.**

The SECRETARY OF COMMERCE AND POLICE,
Manila, P. I.

SIR: I have the honor to submit herewith the annual report of Bilibid Prison for the fiscal year ending June 30, 1904.

PRISON POPULATION.

On June 30, 1903, there were 2,776 prisoners in confinement; 5,999 commitments were received during the year and 4,457 discharged, leaving a gain of 1,542 for the year, and a total on June 30, 1904, of 4,318 prisoners in confinement, or an increase of 55 per cent. The highest number in confinement was 4,459, on May 19, and the lowest number 2,774, on July 5. The average number in confinement was 3,735, or an increase over the preceding year's average of 73 per cent.

This large percentage of increase comes largely through executive orders requiring all provincial prisoners sentenced to two or more years' imprisonment being sent to this institution for safe-keeping.

MAINTENANCE.

The gross cost per capita of maintenance for the year is but ₱122.66, or 0.33½ centavos per day per capita; this includes all expenses of salaries, subsistence supplies, etc. Deducting the receipts of sales of prison-manufactured articles and amounts earned for maintenance of military, provincial, and municipal prisoners, the net cost per annum per capita would be but ₱78, and the daily per capita tax but 0.21½ centavos. In this connection, for the purpose of comparison, the gross per capita tax of some of the largest prisons in the United States, as shown by their annual reports, is given, in Philippine currency: Ohio, ₱1.10; New York, ₱0.75½; Illinois, ₱0.90; Massachusetts, ₱0.82; New Jersey, ₱0.87; Vermont, ₱1.80.

MANUFACTURES.

The prison is now manufacturing carriages, carromattas, calesins, buckboards, carts, etc., cloth for prison use, laundry, bamboo and wicker furniture, hats, carabao horn, pearl shells, and silverware, the sales from the manufactured articles having increased 84 per cent over those of the previous year. With the new shops and machinery about to be installed, it is hoped to make the prison practically self-sustaining. A large part of the prison labor is used for the

benefit of the prison and can not be shown in dollars and cents. All of the clothing, underwear, and hats used are manufactured within the walls, and a large part of the cloth is also manufactured. All the iron-work, grading, carpenter work, laundry, painting, etc., necessary for an institution of this magnitude is accomplished entirely with prison labor.

IMPROVEMENTS.

One pavilion 176 by 33 feet has been completed and one 145 by 33 feet almost completed; gate-house tower, central pavilion, and clock tower, all by prison labor. Outside the walls new shops 800 by 60 feet and a warehouse 200 by 60 feet are being erected under the supervision of the bureau of architecture, the labor for which is supplied by prisoners, and are nearing completion.

DISCIPLINE.

The discipline of the prison continues to improve and the percentage of punishment decreased. The task system has been installed with favorable results. A system of classifying prisoners for industry and ability in their work as well as in conduct is also in operation with great success. There have been but two escapes during the year, one of whom was captured and returned to prison on the same day.

HEALTH.

The general health of the prison has been good, considering the population and the accommodation.

Attention is invited to the report of the resident physician, attached hereto, in regard to the overcrowding of wards and the necessity of new buildings to meet conditions, which is approved and strongly recommended.

RECOMMENDATIONS.

1. The installation of an electric light and power plant at the prison, to furnish the necessary lights and to run the machinery for shops. The lighting of the prison at the present time is inadequate, the only lights within the wards and brigades being oil lamps that are unsatisfactory. There are but 5 arc lights for the entire prison and grounds.

There is not sufficient power to run the machinery necessary to equip the shops, and it is believed that a plant sufficient to furnish necessary lights and power would more than pay for itself in five years.

2. The enactment of a "good time" law based upon the conduct and industry of the prisoner. Under existing laws there is no inducement for the criminal to conduct himself properly or to labor faithfully and intelligently, as the man who refuses to work or to observe the rules fulfills his sentence and procures his release as soon.

The modern idea is to make the prisoner an agent in effecting his own release, and it has become an established practice in nearly all civilized countries to allow the prisoner to earn a reduction of his sentence by his good behavior.

The Hon. S. J. Barrows, secretary of the New York Prison Association, says in The Forum:

To remit any part of a penalty because of the conduct of the prisoner is to make an appeal to his self-interest. The only ethics in his "goodness" are of a purely utilitarian order. He finds himself in a community of offenders as well as under a system of rules and laws which are so rational that it is of no advantage to him to break them. He promptly discovers that it will not pay to violate rules if by keeping them he can not only avoid immediate punishment but can also gain a future reward. Ethically it may be a small gain, weighed in the scale of motives; but practically it is of great importance for the protection of society, when a man decides that it does not pay him to violate law. There is something gained, too, when a prisoner learns to consider the effect of his conduct on his own welfare two or three years ahead.

3. The enactment of a "longevity law," for increase of pay for inspectors, guards, and keepers after two years' service, as enacted for the benefit of the police and firemen. These men have to labor nights, Sundays, and holidays; they have to be on the alert all the time when on duty, and subject to call after completion of their regular hours.

STATISTICS.

The tabulated reports of this prison, showing its transactions for the past year, are attached and made a part of this report.

The officers and employees of this prison by their vigilance, industry, and cordial cooperation have been of vast assistance in the work accomplished. They have worked many hours overtime and faithfully. The absence of the warden of this prison, Mr. George N. Wolfe, on vacation in the United States, to whose energy and ability for systematic organization the present excellent standard in prison work has been brought, prevents any recommendations that his experience might have suggested.

To the honorable the civil governor and the honorable Commission I am also under many obligations for support and assistance.

Respectfully submitted.

M. L. STEWART,
Acting Warden.

FINANCIAL STATEMENTS, INCLUDING DISBURSING OFFICER'S, STEWARD'S, AND CASHIER'S CLERKS' REPORTS.

REPORT OF THE RESIDENT PHYSICIAN.

MANILA, P. I., July 14, 1904.

SIR: I have the honor to submit herewith the annual report of the medical department for the year beginning July 1, 1903, and ending June 30, 1904.

During the year 12,167 prisoners reported at morning sick call. Of this number 11,244 were prescribed for and returned to work, while 923 were admitted to the hospital, 265 died, and 658 recovered.

There were 11,716 visits made to the hospital for the treatment of diseases of the eye, ear, nose, throat, and skin, genito-urinary system, and diseases of minor surgical importance. These prisoners were returned immediately to work, losing on an average one hour a day until cured. The average number of days that each prisoner reported for treatment was seven. The average length of illness in hospital, excluding tuberculosis, was thirteen days.

There were three outbreaks of the major infectious diseases during the year—cholera Asiatica, and pneumonic plague in July and August, and smallpox in March.

Of the 18 cases of cholera, 15 died and 3 recovered. The disease gained entrance to the prison through the agency of dried fish, caught in Manila Bay during the dry season. This food was immediately prohibited and the epidemic promptly ceased.

Plague, pneumonia was introduced by means of bamboo, used in the manufacture of furniture, in the shops. The poles had been delivered to the prison from the esteros, where it had become thoroughly impregnated with the infected waters and slime. Notwithstanding the fact that the bamboo was thoroughly washed and sun dried, the splitting and scraping coincident to manufacture resulted in disseminating the infection through the agency, the dust which, being inhaled into the lungs, caused the disease. The recommendations made by the writer concerning the delivery of bamboo to wagons immediately from the bay or river, and the subsequent disinfection of the same in long tanks, resulted in the extermination of the disease. There were 15 cases of this disease, with 13 recoveries and 2 deaths. This remarkable and gratifying mortality is attributed to prompt diagnosis and immediate treatment with the Japanese plague antitoxin, given boldly in large doses frequently repeated.

Smallpox occurred in its most virulent form, 4 out of 6 ill with the disease dying from the infection.

As the entire prison population is vaccinated every four months, and all new arrivals vaccinated in quarantine, the solution of the cause of the smallpox epidemic lies in the

fact that as the disease has a very long incubation period, and the quarantine, owing to the crowded condition of the prison and to the lack of proper quarantine facilities, being of one day only, is insufficient to render the vaccinated prisoners immune or to admit of the development of the disease if already present previous to admittance to the prison.

The question of quarantine in an institution of the magnitude of this prison is a serious one, and while the writer is fully alive to the difficulties of providing accommodations for the large number of men that enter the prison every day, he most earnestly recommends that some action be taken, as soon as practicable, toward establishing a quarantine building with at least five compartments, allowing for the proper isolation of each day's admissions. In this way a complete and exhaustive examination of each man may be made, not only for cholera, plague, and smallpox, but for the far more important, because less dreaded and therefore less noticed, diseases of tuberculosis and leprosy.

By far the most important disease that has occurred among the prisoners is lobar pneumonia, a disease not commonly recognized as occurring in tropical countries, but which, owing partly to artificially produced conditions, has attained a virulence and strength that makes it stand at the head of the list of death producers.

The cause or causes responsible for the presence of this disease here in the prison deserve careful and thorough investigation and consideration, for it is to prophylaxis, the prevention of disease, that we must look for help, as there is as yet no antitoxine to invoke to counteract the ravages of the disease.

A most complete and conservative investigation of this subject has forced the writer to the conclusion that the presence of lobar pneumonia among the prisoners is due mainly to the overcrowding that exists throughout the entire prison; overcrowding such as it is difficult to comprehend except by actual observation and experience—to the extent that men are forced to sleep as close together as it is possible for them to lie side by side, breathing and rebreathing the poisonous exhalations from lungs and skin, until to one unaccustomed it is inconceivably sickening, repulsive, and unendurable.

The inevitable result of exposure, night after night, to this condition is a lowering of the strength, vitality and resisting powers of the individual that renders him peculiarly susceptible to diseases of the lungs; a ready prey to the germs of pneumonia and tuberculosis.

Estimation of the cubic air space of the ward buildings reveals the fact that buildings that should contain not over 200 men are at present sheltering 500 and over.

A careful and exhaustive study of the subject of the ventilation of sleeping quarters, based upon the peculiar needs and conditions existing in a prison in the tropics, has convinced the writer that each individual should have at least 3 feet of bed space and 300 cubic feet of air space allotted him. This is considered the lowest possible estimate consistent with health and efficiency.

It is therefore recommended that some action be taken, as soon as practicable, toward providing for the enlargement of the sleeping quarters to the needed dimensions.

Another very well marked predisposing cause to diseases of the lungs is the exposure, in thin garments, to the wet and comparatively cold air of the rainy season. As most of the men are unavoidably drenched in the rain during the working day it seems wise and expedient to provide a heavier garment than that worn during the dry season.

During the last month another disease that owes its origin mainly to the overcrowding, namely, beriberi, has broken out among the prisoners. Although as yet there have been but 6 cases, the indications point to a larger number in the near future, provided something is not soon done to improve the conditions.

While every effort possible has been made by the management of the prison to second the writer's endeavor to provide a modern hospital, with the necessary appurtenances, for the treatment of the large number of sick in the prison, the resident physician feels it his duty to invite attention to the inadequate equipment at his disposal for the approved modern treatment of disease, general and surgical, and to request that the matter of providing a complete, modern hospital, with attached quarantine wards, and the employment of four additional American hospital attendants to take the place of the uncertain and doubtfully efficient prison help, be taken up at as early a date as possible.

The resident physician wishes to express his thanks to the management of the government laboratory for the establishment in the prison hospital, of a branch laboratory for diagnostic purposes. This has made possible an accuracy and precision hitherto impossible in the scientific treatment and prevention of disease.

During the three months of its establishment here the writer has made 386 sputum examinations for the diagnosis of tuberculosis of the lungs, 33 blood examinations for malaria, 76 urinalyses and 27 examinations of feces for amebic dysentery.

Appended is a tabulated report of the cases treated in prison for twelve months period ending June 30, 1904.

Respectfully submitted.

WM. R. MOULDEN, M. D.,
Resident Physician.

REPORTS OF THE CHAPLAINS.

MANILA, P. I., June 30, 1904.

The WARDEN OF BILIBID PRISON.

SIR: I have the honor to submit herewith a report on religious functions that took place at this prison during the fiscal year ending June 30, 1904, under my direction:

Religious confessions.....	300
Confessions of the sick.....	130
Deathbed confessions.....	130
Communions.....	250
Burial services.....	166
Benedictions.....	166
Church services.....	40

Respectfully submitted.

EZEQUIEL RIVERA, *Chaplain.*

MANILA, P. I., July 28, 1904.

The WARDEN OF BILIBID PRISON.

SIR: I have the honor to submit the following report relative to religious functions carried on in this prison during the fiscal year ending June 30, 1904:

Confessions made by the sick.....	88
Religious confessions.....	90
Deathbed confessions.....	16
Confessions of the condemned.....	1
Baptisms.....	5
Marriages.....	1
Visits to the sick and carcel.....	120
Religious services on Sundays and Catholic holidays.....	65

Respectfully submitted.

CORNELIO TRINIDAD, *Chaplain.*

SUPPLEMENTARY REPORT OF BILIBID PRISON, JULY 1 TO AUGUST 31, 1904.

MANILA, P. I., September 30, 1904.

SIR: I have the honor to submit herewith a report of Bilibid Prison for the months of July and August, which is in addition to the annual report for the fiscal year ending June 30, 1904, heretofore rendered:

PRISON POPULATION.

On June 30, 1904, there were 4,318 prisoners in confinement; during the months of July and August 843 were received and 685 discharged, leaving on hand August 31, 4,476, or a gain in the two months of 158, the average number in confinement during the two months being 4,357.

MAINTENANCE.

The gross cost per capita per day for the two months is 32 centavos, as against 33½ centavos per day during the past fiscal year, or a reduction of 1½ centavos for each prisoner. A contract for supplying meat has been let for balance of fiscal year 1905 at a price 50 per cent less than formerly paid, which goes into effect October 1 and which will materially reduce the cost of maintenance for the ensuing year.

IMPROVEMENTS.

Since the annual report was made the new central clock tower and one new pavilion, 145 by 33 feet, have been completed.

The new warehouse is being used, although not yet completed.

HEALTH.

The overcrowding of this prison with its present accommodations is not conducive to the best of health. At the time the annual report was made, June 30, there were 23 sick in hospital; 238 have been taken sick since then, 36 died, and 183 discharged cured, leaving 42 now sick in hospital.

There being no other available place for the treatment of the insane, they are being sent to this prison for treatment. There are no accommodations in this place for the proper care of these unfortunates, and I hope that some other arrangements for their care can be made. At the present time there are 13 insane persons confined here, 2 of them females.

Since the annual report has been rendered the longevity increase of pay for guards and keepers, as recommended therein, has been adopted by the honorable Commission and has had a marked effect for good on that force.

A new branch of industry will be added on October 1, when this prison assumes control of the wood manufacturing plant of the forestry bureau. This will make a valuable addition to our manufacturing plant and will enable us to teach prisoners the manufacture and development of native woods.

I desire also to recommend the establishment of a rope-manufacturing plant to our other industries, believing that the manufacture of the hemp grown here into rope is an industry that should be encouraged.

Attached hereto you will find tabulated statements of all the financial transactions of this prison during the months of July and August.

To you, sir, I am under many obligations for support and assistance in carrying out the work of this institution, and to the honorable Commission for their support and encouragement.

Respectfully submitted.

M L. STEWART, *Acting Warden.*

The SECRETARY OF COMMERCE AND POLICE,
Manila, P. I.

REPORT OF THE BUREAU OF COAST AND GEODETIC SURVEY, JULY 1, 1903, TO JUNE 30, 1904.

MANILA, P. I., July 25, 1904.

SIR: I have the honor to report as follows upon the progress of the coast and geodetic survey in the Philippine Islands from July 1, 1903, to June 30, 1904:

On July 1, 1903, Mr. George R. Putnam, assistant, Coast and Geodetic Survey, was chief of bureau and directed its operations in Manila (except between December 1 and 12, when he went on a trip of inspection to the southern islands) up to March 2, on which date he sailed for the United States to consult with the Superintendent of the Coast and Geodetic Survey and for a leave of absence. Mr. Charles C. Yates, assistant, Coast and Geodetic Survey, was in temporary charge for the twelve days in December.

When Mr. Putnam's trip was decided upon the superintendent selected me as assistant in charge of the suboffice, and on this selection I was designated by the honorable civil governor to serve as acting chief of the bureau, and so continued in charge to date.

FIELD WORK.

North coast of Luzon.—The triangulation and topography was extended from Bontolan Point to Bolinao, and then operations had to cease because of the setting in of the rainy season. This survey shows the actual shore line and correct representation of all towns, roads, natural features, and prominent landmarks. The triangulation stations on which it is based have been carefully marked, and will supply bases for extensions of future cadastral surveys and for studies for works of public improvement.

Point Dile to Culili Point.—A hydrographic survey was made of this section of the coast of Luzon, including surveys of Port Currimao and Salomague Harbor.

Manila Bay.—An inshore hydrographic survey was made of the waters of Manila Bay from Malate to a point 4 miles southwest of Sangley Point, including a large scale survey of Bacoor and Cañacao Bays; the topography was completed from Cavite to a point on outside coast due west of Cavite Viejo; a topographical survey was made of the coast line around Malabon; and an examination was made for a shoal off the east end of Caballo Island, marked doubtful on recent charts, but no such danger was found in the position hitherto given.

Danao River and approaches.—The lower part of this river, to the highest point serviceable for navigation, and the coast line around to Escalante was surveyed. This embraces the only protected harbor on the north coast of Negros.

North coast of Panay.—A complete survey, triangulation, topography, and hydrography was made of this coast from Capiz to Port Batan, with the exception of topography and hydrography of Sapián Bay, the change of monsoon preventing the completion of Sapián Bay.

Lagonoy Gulf.—A complete survey was made of Lagonoy Gulf and Tabaco Bay, embracing the triangulation, topography, and hydrography. This includes the south coast of Catanduanes Island, from Point Nagumbuaya to Sialot; Luzon, from Point Bungus to Bagacay; and from northwest point of San Miguel Island to northeast end of Batan Island. The shape of the coast line of Catanduanes Island was materially changed by this survey, but the most important result was the proof of the freedom of the waters of the gulf from large areas of shoals hitherto shown on the charts.

Iloilo Strait and approaches.—Were surveyed on a large scale. The triangulation was extended from a line joining Dumangas Point, Panay, with the northeast point of Guimaras Island, to a line joining Point Dolores, Guimaras, with Talisaya Point, Panay. The topography extended from Dumangas Point, Panay, to Tigbauan, and from northeast point of Guimaras to Point Dolores, on west coast of Guimaras. A detailed survey was made of Iloilo River. The hydrography extended from a section 8 miles east of Siete Pecados light (including the Iguana Bank) to a junction with the work of the navy in Iloilo Harbor, the navy work being supplemented by the survey of a section extending from Lusaran light-house northward, which included Ports Santa Ana and Igan. This survey removes the doubt felt as to the practicability of the use of the eastern approach to Iloilo by large vessels, and shows that a good safe passage for vessels drawing 30 feet exists.

Guimaras Strait.—The survey of this strait was begun on January 10 and continued until March 27, when the steamer had to return to Manila for docking and repairs. The triangulation was extended from center of strait to its southern end, the topography was embraced between the same limits, and the hydrography covers almost an equal area. In the course of the work very extensive changes were made in the previously accepted representation of this section. Rosario Rock was found to be three-fourths of a mile northwest of position shown on charts, and a very much more dangerous condition was found to exist on Pandan Shoal; the survey shows considerable changes in the appearance of the coast line in the area covered.

Geographic positions.—The latitudes and longitudes of Cuyo (on Cuyo Island) and San José Buenavista, Panay, were determined during the year, thus completing the list of desirable points for which necessary telegraph connection could be secured at the time. The determination of the longitude of Manila, through Guam, Midway, Honolulu, and San Francisco, by the Coast and Geodetic Survey, was completed this year, making the first unbroken longitude circuit of the globe.

Magnetic observations.—To secure information necessary for charts, magnetic observations have been made at eight stations. Meridian lines have been laid out at the astronomical stations, and azimuth determinations in connection with all the triangulation work enable surveyors with ordinary instruments to readily lay off true meridians from any two intervisible triangulation stations.

Tidal observations have been made at ten stations. Nine of these were in connection with the various hydrographic operations. At Manila the tidal record is a continuous one for the year; at Iloilo a similar record was obtained for ten months. These supply valuable data for the predictions in the annual tide tables published by the Survey for the Philippine Islands.

Personnel.—The field work has been executed by the following chiefs of parties: J. J. Gilbert, assistant, general survey work with steamer *Pathfinder*; Fremont Morse, assistant, astronomical determinations; John E. McGrath, assistant, astronomical determinations; W. B. Fairfield, assistant, astronomical determinations, topography, and triangulation work; William Bowie, assistant, general survey work with chartered launch; H. F. Flynn, assistant, astronomical determinations, magnetics, triangulation, and topography; R. B. Derickson, assistant, general survey work with steamer *Research* and chartered launch; John Bach, observer, triangulation, and topography.

Steamers.—The Coast and Geodetic Survey steamer *Pathfinder* has been employed in surveys in the archipelago up to May 27, when it was found necessary to send her to Hongkong for extensive overhauling and repairs. While there her launch and boat equipment will be renovated and increased.

The steamer *Research* has been actively employed throughout the year, with the exception of the period between March 27 and June 10. During this time she returned to Manila for extensive overhauling and repairs, and then got back to her working ground.

Five different shipbuilding concerns submitted tenders for the construction of the new steamer which was provided for by the Commission, and, the terms of the Hongkong and Whampoa Dock Company proving to be the best, a contract was made with them on

January 27, which was approved by the civil governor. On February 3 Mr. Charles C. Yates, assistant, proceeded to Hongkong to act as inspecting officer of construction, and the progress on the vessel has continued very satisfactorily; two-fifths of the contract price has already been earned. The steamer is framed, engine bed plates and cylinders are cast, crank and propeller shaft forged, small boats framed, and ship's fittings are well under way. According to the terms of the contract the steamer should be ready for her trial trip on October 15, 1904.

OFFICE WORK.

The scheme of organization of the Manila suboffice continues the same as heretofore reported, and its detailed operations are herewith described. In November extensive changes were made in our quarters in the intendencia building, enlarging greatly the space assigned to the computing and drawing sections, improving the light and air conditions, and placing an admirably situated chamber at our disposal for a storeroom for instruments and general property of the Survey.

Computing.—The computing division continued in charge of Mr. E. R. Frisby, who was regularly assisted by Mr. F. F. Pangan, junior computer, and Mr. Ignacio Cruz, junior clerk. Messrs. McGrath, Ferguson, Fairfield, Flynn, assistants, Coast and Geodetic Survey; Mr. Staples, aid, Coast and Geodetic Survey, and Mr. Bach, observer, were employed in the division at different times on computations necessary for the completion of the field work executed by them and while awaiting orders for the field.

The following is a statement of the work executed in this division during the time covered by this report:

TRIANGULATION.

Office reduction of angles and computation of triangle sides, geographical positions, base measurements, computation of heights and incidental azimuth and time determinations: Vigan to Aparri, north and west coast of Luzon; Capiz to Batan, north coast of Panay; Iloilo Strait and approaches, Point Dumangas to Talisaya Point; Danao River, north coast of Negros; Puerto Galera, Mindoro; Mangarin Bay and Ilin Strait, Mindoro.

Correcting computed triangulation to accord with new data: San Fernando to Bolinao, San Fernando Harbor, Santo Tomas Harbor, Balinao Harbor, and Sual Harbor, west coast of Luzon.

ASTRONOMY.

Computation of differences of longitudes: Cuyo, Cuyo, and Iloilo, Panay; San José de Buenavista and Iloilo, Panay; Ormoc, Leyte, and Surigao, Mindanao; Calapan, Mindoro, and Romblon, Romblon; Batangas, Luzon, and Romblon, Romblon; Masbate, Masbate, and Romblon, Romblon; Boac, Marinduque, and Romblon, Romblon.

Abstracts prepared of 17 volumes containing results of 21 telegraphic longitudes.

Adjustment of longitude nets for telegraphic longitudes in archipelago.

MAGNETICS.

Magnetic declination, dip and horizontal intensity at Batangas, Boac, Calbayoc, Calapan, Catbalogan, Cuyo, Iligan, Legaspi, Romblon, Surigao, San José de Buenavista, Valle Hermosa.

Magnetic declination computed at 18 other stations.

HYDROGRAPHY.

Tabulating of hourly tidal readings from automatic records: Manila, 10 months; Puerto Galera, 2 months; Iloilo, 9 months; Mangarin Bay, 2 months; Capiz, 2 months; Port Sual, 8 months; Inampulugan Island, 2 months.

Reduction of tide staff readings and comparisons with a principal station for Siete Pecados, Santa Ana, Batan, Dagupan, and Bolinao: Reductions of soundings—Lingayen Gulf, 24 volumes; Iloilo, 18 volumes; Guimaras Strait, 8 volumes; Capiz and Batar, 7 volumes; Puerto Galera, 7 volumes; Mangarin Bay, 7 volumes; Danao River, 5 volumes,

MISCELLANEOUS.

Duplicates had to be prepared and verified of all records not completed in field and of all computations and abstracts of results prepared or received in the office. Necessary data in the shape of copies of descriptions of stations, instrumental constants, copies of connecting triangulation are supplied to field parties and in reply to requests from various sources. Also the local values for magnetic declination and standard geographical data were made out for charts in process of construction.

Sailing directions.—In the nautical information section, Mr. J. C. Dow, nautical expert, in charge, has continued the preparation of the bulletin, Notice to Mariners, wherein the earliest practicable information is communicated to the public of all changes, of which we can secure reliable information, which are of importance to mariners. In addition, Section II, Philippine Island Sailing Directions, southwest and south coast of Luzon from Manila to San Bernardino Strait, has been revised and published, and Section III, Sailing Directions for the Coasts of Panay, Negros, Cebu and Adjacent Islands, and Section IV, Sailing Directions for the Coasts of Samar and Leyte and the East Coast of Luzon, have been revised, rewritten to a large extent, and are now in the hands of the printer. The preparation of the sailing directions necessitated trips of inspection to the sections described and actual verification (where no recent surveys have been made) of all new material that had been collected. The nautical information section in Manila, offers all the cooperation within its power to the maritime interests and every possible assistance that lies within the capacity of a hydrographic office is always at the service of shipping interests. The demand for the sailing directions evidences the importance of the want they fill; by the time the printer can supply new copies it is estimated we will not have on hand more than the file copies of Sections III and IV, of which editions 600 each have been published. The regular list for issue of Notice to Mariners now calls for 734 copies of each edition, and there have been 11 numbers published in the period covered by this report.

Drawing section.—The chief duties of this division are: The inking of topographic sheets and the plotting, inking, and verification of such hydrographic sheets as can not be thus prepared in the field; preparation of projections for field parties, and the preparation of finished drawings for chart publications. At the date of the last report the force of draftsmen comprised Messrs. P. B. Castles, and J. P. Keleher in charge of the subdivisions of the section, under whom were 10 native draftsmen. In January the force of native draftsmen was increased to 15, and on the departure of Mr. Castles who was imperilled home for serious family reasons, the entire charge of the division devolved upon Mr. Keleher, who is still in sole charge, but is shortly to give him additional American assistance. The system of verification which accompanies every step of the production insures the independent checking of every sounding, posi-

tion, and feature which go to make it up, and this has been attended to by the chief of the bureau, the chief draftsman. Mr. Charles C. Yates, assistant, aided in this work between July 11 and December 31, and Mr. William Bowie, assistant, has been employed on the same duty between April 23 and June 30.

The work of the native draftsmen is surprisingly excellent and their services are worthy of very great praise, but, as only two of them ever had experience in the class of work on which they are now engaged, scarcely anything can be left to their initiative and the work of supervision has to be incessant and untiring. The task of securing a substitute for Mr. Castles has shown that it is an extremely difficult matter to secure the special class of draftsmen for service over here that is necessary, unless by the payment of very high salaries. A solution of the difficulty is offered by the proposition which has been submitted in the annual estimates, which provides for training two young men (Filipinos), who have demonstrated special aptitude for the work in the Coast and Geodetic Survey Office in Washington. While so engaged their services would be utilized exclusively on Philippine work, and they would be insured instruction and a special training of the highest character.

Statement of work executed between July 1, 1903, and June 30, 1904.

TOPOGRAPHIC SHEETS.

No.	Description.	Scale.	Remarks.

29	Iloilo Strait (Molo and vicinity).....	1 : 10,000	Do.
30	Northwest coast of Guimaras (Bondulan Point to Naburul Island).....	1 : 20,000	Do.
31	Iloilo River.....	1 : 2,500	Do.
32	Eastern entrance Iloilo Strait.....	1 : 20,000	Do.
33	Nayon River to Port Caiman.....	1 : 20,000	Do.
34	Port Galera and Varadero Bay.....	1 : 10,000	Do.
35	Dagupan, Lingayen Gulf.....	1 : 10,000	Do.

Guimaras Strait.—The survey of this strait was begun on January 10 and continued until March 27, when the steamer had to return to Manila for docking and repairs. The triangulation was extended from center of strait to its southern end, the topography was embraced between the same limits, and the hydrography covers almost an equal area. In the course of the work very extensive changes were made in the previously accepted representation of this section. Rosario Rock was found to be three-fourths of a mile northwest of position shown on charts, and a very much more dangerous condition was found to exist on Pandan Shoal; the survey shows considerable changes in the appearance of the coast line in the area covered.

Geographic positions.—The latitudes and longitudes of Cuyo (on Cuyo Island) and San José Buenavista, Panay, were determined during the year, thus completing the list of desirable points for which necessary telegraph connection could be secured at the time. The determination of the longitude of Manila, through Guam, Midway, Honolulu, and San Francisco, by the Coast and Geodetic Survey, was completed this year, making the first unbroken longitude circuit of the globe.

Magnetic observations.—To secure information necessary for charts, magnetic observations have been made at eight stations. Meridian lines have been laid out at the astronomical stations, and azimuth determinations in connection with all the triangulation work enable surveyors with ordinary instruments to readily lay off true meridians from any two intervisible triangulation stations.

Tidal observations have been made at ten stations. Nine of these were in connection with the various hydrographic operations. At Manila the tidal record is a continuous one for the year; at Iloilo a similar record was obtained for ten months. These supply valuable data for the predictions in the annual tide tables published by the Survey for the Philippine Islands.

Personnel.—The field work has been executed by the following chiefs of parties: J. J. Gilbert, assistant, general survey work with steamer *Pathfinder*; Fremont Morse, assistant, astronomical determinations; John E. McGrath, assistant, astronomical determinations; W. B. Fairfield, assistant, astronomical determinations, topography, and triangulation work; William Bowie, assistant, general survey work with chartered launch; H. F. Flynn, assistant, astronomical determinations, magnetics, triangulation, and topography; R. B. Derickson, assistant, general survey work with steamer *Research* and chartered launch; John Bach, observer, triangulation, and topography.

Steamers.—The Coast and Geodetic Survey steamer *Pathfinder* has been employed in surveys in the archipelago up to May 27, when it was found necessary to send her to Hongkong for extensive overhauling and repairs. While there her launch and boat equipment will be renovated and increased.

The steamer *Research* has been actively employed throughout the year, with the exception of the period between March 27 and June 10. During this time she returned to Manila for extensive overhauling and repairs, and then got back to her working ground.

Five different shipbuilding concerns submitted tenders for the construction of the new steamer which was provided for by the Commission, and, the terms of the Hongkong and Whampoa Dock Company proving to be the best, a contract was made with them on

January 27, which was approved by the civil governor. On February 3 Mr. Charles C. Yates, assistant, proceeded to Hongkong to act as inspecting officer of construction, and the progress on the vessel has continued very satisfactorily; two-fifths of the contract price has already been earned. The steamer is framed, engine bed plates and cylinders are cast, crank and propeller shaft forged, small boats framed, and ship's fittings are well under way. According to the terms of the contract the steamer should be ready for her trial trip on October 15, 1904.

OFFICE WORK.

The scheme of organization of the Manila suboffice continues the same as heretofore reported, and its detailed operations are herewith described. In November extensive changes were made in our quarters in the intendencia building, enlarging greatly the space assigned to the computing and drawing sections, improving the light and air conditions, and placing an admirably situated chamber at our disposal for a storeroom for instruments and general property of the Survey.

Computing.—The computing division continued in charge of Mr. E. R. Frisby, who was regularly assisted by Mr. F. F. Pangan, junior computer, and Mr. Ignacio Cruz, junior clerk. Messrs. McGrath, Ferguson, Fairfield, Flynn, assistants, Coast and Geodetic Survey; Mr. Staples, aid, Coast and Geodetic Survey, and Mr. Bach, observer, were employed in the division at different times on computations necessary for the completion of the field work executed by them and while awaiting orders for the field.

The following is a statement of the work executed in this division during the time covered by this report:

TRIANGULATION.

Office reduction of angles and computation of triangle sides, geographical positions, base measurements, computation of heights and incidental azimuth and time determinations: Vigan to Aparri, north and west coast of Luzon; Capiz to Batan, north coast of Panay; Iloilo Strait and approaches, Point Dumangas to Talisaya Point; Danao River, north coast of Negros; Puerto Galera, Mindoro; Mangarin Bay and Ilin Strait, Mindoro.

Correcting computed triangulation to accord with new data: San Fernando to Bolinao, San Fernando Harbor, Santo Tomas Harbor, Balinao Harbor, and Sual Harbor, west coast of Luzon.

ASTRONOMY.

Computation of differences of longitudes: Cuyo, Cuyo, and Iloilo, Panay; San José de Buenavista and Iloilo, Panay; Ormoc, Leyte, and Surigao, Mindanao; Calapan, Mindoro, and Romblon, Romblon; Batangas, Luzon, and Romblon, Romblon; Masbate, Masbate, and Romblon, Romblon; Boac, Marinduque, and Romblon, Romblon.

Abstracts prepared of 17 volumes containing results of 21 telegraphic longitudes.

Adjustment of longitude nets for telegraphic longitudes in archipelago.

MAGNETICS.

Magnetic declination, dip and horizontal intensity at Batangas, Boac, Calbayoc, Calapan, Catbalogan, Cuyo, Iligan, Legaspi, Romblon, Surigao, San José de Buenavista, Valle Hermosa.

Magnetic declination computed at 18 other stations.

HYDROGRAPHY.

Tabulating of hourly tidal readings from automatic records: Manila, 10 months; Puerto Galera, 2 months; Iloilo, 9 months; Mangarin Bay, 2 months; Capiz, 2 months; Port Sual, 8 months; Inampulugan Island, 2 months.

Reduction of tide staff readings and comparisons with a principal station for Siete Picos, Santa Ana, Batan, Dagupan, and Bolinao: Reductions of soundings—Lingayen Gulf, 24 volumes; Iloilo, 18 volumes; Guimaras Strait, 8 volumes; Capiz and Batar, 7 volumes; Puerto Galera, 7 volumes; Mangarin Bay, 7 volumes; Danao River, 5 volumes,

MISCELLANEOUS.

Duplicates had to be prepared and verified of all records not completed in field and of all computations and abstracts of results prepared or received in the office. Necessary data in the shape of copies of descriptions of stations, instrumental constants, copies of connecting triangulation are supplied to field parties and in reply to requests from various sources. Also the local values for magnetic declination and standard geographical data were made out for charts in process of construction.

Sailing directions.—In the nautical information section, Mr. J. C. Dow, nautical expert, in charge, has continued the preparation of the bulletin, Notice to Mariners, wherein the earliest practicable information is communicated to the public of all changes, of which we can secure reliable information, which are of importance to mariners. In addition, Section II, Philippine Island Sailing Directions, southwest and south coast of Luzon from Manila to San Bernardino Strait, has been revised and published, and Section III, Sailing Directions for the Coasts of Panay, Negros, Cebu and Adjacent Islands, and Section IV, Sailing Directions for the Coasts of Samar and Leyte and the East Coast of Luzon, have been revised, rewritten to a large extent, and are now in the hands of the printer. The preparation of the sailing directions necessitated trips of inspection to the sections described and actual verification (where no recent surveys have been made) of all new material that had been collected. The nautical information section in Manila, offers all the cooperation within its power to the maritime interests and every possible assistance that lies within the capacity of a hydrographic office is always at the service of shipping interests. The demand for the sailing directions evidences the importance of the want they fill; by the time the printer can supply new copies it is estimated we will not have on hand more than the file copies of Sections III and IV, of which editions 600 each have been published. The regular list for issue of Notice to Mariners now calls for 734 copies of each edition, and there have been 11 numbers published in the period covered by this report.

Drawing section.—The chief duties of this division are: The inking of topographic sheets and the plotting, inking, and verification of such hydrographic sheets as can not be thus prepared in the field; preparation of projections for field parties, and the preparation of finished drawings for chart publications. At the date of the last report the force of draftsmen comprised Messrs. P. B. Castles, and J. P. Keleher in charge of the subdivisions of the section, under whom were 10 native draftsmen. In January the force of native draftsmen was increased to 15, and on the departure of Mr. Castles who was imperatively called home for serious family reasons, the entire charge of the division devolved upon Mr. Keleher, who is still in sole charge, but it is hoped shortly to give him additional American assistance.

The verification which accompanies every step of the production of a chart insures the independent checking of every sounding, posi-

tion, and feature which go to make it up, and this has been attended to by the chief of the bureau, the chief draftsman. Mr. Charles C. Yates, assistant, aided in this work between July 11 and December 31, and Mr. William Bowie, assistant, has been employed on the same duty between April 23 and June 30.

The work of the native draftsmen is surprisingly excellent and their services are worthy of very great praise, but, as only two of them ever had experience in the class of work on which they are now engaged, scarcely anything can be left to their initiative and the work of supervision has to be incessant and untiring. The task of securing a substitute for Mr. Castles has shown that it is an extremely difficult matter to secure the special class of draftsmen for service over here that is necessary, unless by the payment of very high salaries. A solution of the difficulty is offered by the proposition which has been submitted in the annual estimates, which provides for training two young men (Filipinos), who have demonstrated special aptitude for the work in the Coast and Geodetic Survey Office in Washington. While so engaged their services would be utilized exclusively on Philippine work, and they would be insured instruction and a special training of the highest character.

Statement of work executed between July 1, 1903, and June 30, 1904.

MISCELLANEOUS WORK.

Nine topographical sheets showing surveys from Vigan to Claveria were traced for the provincial government of Ilocos Norte.

One draftsman was employed for two weeks in the determination of the areas of the friars' land under the bureau of engineering.

A number of projections were prepared for field parties, and some tracings were made for the army, constabulary, and treasury. The time of one draftsman is exclusively required to color lights, buoys, and beacons, and add newly confirmed dangers on published charts.

MISCELLANEOUS DIVISION.

Mr. W. H. MacDonald, chief clerk. Here the correspondence of the office is typewritten and copied; all the files are kept; copies are made of all accounts, reports, and descriptive sheets; the record of all party and office expenses is made; the inventories are checked, and direct supervision of repairs to and care of all government property is exercised. This clerk also has charge of the published charts and accounts with chart agents and attends to the distribution of all the Survey publications. The duties of the clerk have now outgrown the capacity of any one man to attend to them properly, and it is hoped that in the coming fiscal year additional help will be granted.

The number of charts distributed for official use or disposed of by sale in the islands from July 1 to June 30 was 4,251.

Statement of work executed between July 1, 1903, and June 30, 1904—Continued.

A number of projections were prepared for field parties, and some tracings were made for the army, constabulary, and treasury. The time of one draftsman is exclusively required to color lights, buoys, and beacons, and add newly confirmed dangers on published charts.

MISCELLANEOUS DIVISION.

Mr. W. H. MacDonald, chief clerk. Here the correspondence of the office is typewritten and copied; all the files are kept; copies are made of all accounts, reports, and descriptive sheets; the record of all party and office expenses is made; the inventories are checked, and direct supervision of repairs to and care of all government property is exercised. This clerk also has charge of the published charts and accounts with chart agents and attends to the distribution of all the Survey publications. The duties of the clerk have now outgrown the capacity of any one man to attend to them properly, and it is hoped that in the coming fiscal year additional help will be granted.

The number of charts distributed for official use or disposed of by sale in the islands from July 1 to June 30 was 4,251.

Number of charts received from the Coast and Geodetic Survey office in Washington from July 1, 1903, to June 30, 1904, 4,125.

The number of charts printed in Manila July 1, 1903, to June 30, 1904, was 3,366.

Between July 11 and February 2, besides duties in connection with chart verification, Mr. Charles C. Yates, assistant, was engaged in the preparation of preliminary plans and specifications for the construction of a launch and the Survey steamer which is now being constructed in Hongkong.

The Survey is indebted for many favors to other bureaus and offices of the general and insular governments, but particular acknowledgment must be made for valuable information and material help to the bureau of coast guard and transportation, the chief quartermaster, the chief engineer officer, and the chief signal officer of the United States Army in the Philippines; the bureau of engineering, and to the masters of the merchant marine, who attest by their ready response to our request for cooperation their appreciation of the efforts being made to improve up to the requirements of modern standards the charts and sailing directions of the Philippine Islands.

The cost of the survey, as in the past year, has been met by a division of expenses between the United States and the Philippine government. The United States has defrayed all the expenses for the field officers and experts detailed for service in the islands, the lithographing, engraving, and publishing of charts, and furnished the instrumental outfit and supplies from the United States. The Philippine government has defrayed the local field and office expenses, maintained the steamer *Research*, and is paying for the construction of the Survey vessel now building at Hongkong.

Two sketches are submitted herewith, which show graphically the extent of the field work for the period of this report.

Yours, respectfully,

JOHN E. McGRATH,

Assistant, Coast and Geodetic Survey, in charge of Office.

THE SECRETARY OF COMMERCE AND POLICE,

Manila, P. I.

THIRD ANNUAL REPORT
OF THE
SECRETARY OF FINANCE AND JUSTICE
TO THE
PHILIPPINE COMMISSION.

347

REPORT OF THE SECRETARY OF FINANCE AND JUSTICE.

DEPARTMENT OF FINANCE AND JUSTICE,
Manila, P. I., November 15, 1904.

GENTLEMEN: I hereby submit a report on matters, legislative and executive, pertaining to the department of finance and justice in the Philippine Islands during the period from September 1, 1903, to September 1, 1904.

Some of the data contained in this report are brought down to a date later than September 1, 1904, but unless otherwise stated this report will cover the year from September 1, 1903, to September 1, 1904.

ADMINISTRATION OF JUSTICE.

Prior to the date of the second annual report from this office to the Commission, November 6, 1903, new legislation had been enacted covering the subject of leaves of absence of judges, changing the times and places of holding the supreme court and rearranging the judicial districts and times and places of holding the court in each province, creating two additional judicial districts, revising certain provisions of law as to special terms of court, and making more adequate provision as to traveling expenses of judges, fiscals, and clerks.

Under the partial reorganization of the courts, as above stated, the administration of justice has been conducted throughout the islands in a manner on the whole satisfactory. The larger number of judges authorized by the legislation referred to has enabled the courts substantially to keep abreast of all litigation. Indeed, in some of the districts the judges have not been fully occupied and have been available for temporary transfers to other fields of labor. The liberal provisions of law for leaves of absence for judges enabled six of the judges, after three years' continuous service, to be absent from the Philippine Islands, in the United States or elsewhere, for practically five months each, from May 1 until October 1. But by temporary assignment of judges at large to special districts and by detailing judges of the court of customs appeals for duty in the courts of first instance the regular July, August, and September terms of every court of first instance have been held at the proper time and the dockets finished. The return of the absent judges, together with the utilization of the judges at large, will enable the regular subsequent terms to be held at the times fixed by law.

In the supreme court the situation has not been so fortunate. At the close of the court year, May 1, 1904, two of the judges of the

supreme court, the Hon. Charles A. Willard and the Hon. John T. McDonnough, much to the regret of the government, tendered their resignations, which were accepted. Both were able judges, and Judge Willard, by several years' service, had acquired a thorough knowledge of the Spanish language and of the law prevailing in the islands. His retirement from the insular service was a distinct loss to the judiciary. Judge McDonnough served for a shorter period, but had proven himself to be an able and upright jurist. At the same time that Judges Willard and McDonnough retired three other judges of the supreme court availed themselves of their five months' leave of absence, authorized by law after three years' service, and went to the United States, leaving but two judges of the supreme court on duty. The law requires five judges to constitute a quorum, and consequently the supreme court has been unable to hold sessions since the 1st day of May, 1904, the vacancies created by the resignation of Judges Willard and McDonnough not having been filled. This fact has resulted in a large accumulation of business in the supreme court, to the great detriment of the litigants and particularly to alleged criminals whose cases are pending in the supreme court. The court will probably be able to reconvene some time in December, with a bare quorum, should all the judges who are now holding office be in Manila and ready for service. It is not believed that this unfortunate condition will soon again arise.

On the 25th day of October, 1904, there were pending in the supreme court—

Civil cases	242
Criminal cases	591
Total	833

The number of cases disposed of by that court in the court year, from July 1, 1903, to May 1, 1904, either by trial and decision or otherwise, was 339.

No cases have been disposed of since the 1st of July owing to the want of a quorum in the court. The situation, therefore, is that if cases are not disposed of more rapidly by the supreme court in the future than in the past year it will be more than two years and a half before a case entered in the supreme court at this time or subsequently can be disposed of. This condition of affairs is most disastrous, and results in a practical denial of justice in many cases.

The difficulties arising from the want of a quorum during the first half of the court year of 1904 and 1905 will be corrected if the Philippine bill now pending in Congress is passed, one of the provisions of which is that in the absence of a quorum one or more judges of the court of first instance may be detailed to sit with the supreme court to constitute a quorum. This provision, however, does not strike at the root of the difficulty.

It is possible that the supreme court may be able to expedite the work which has accumulated by having longer hours for the hearing of cases and by restricting the length of time allowed for argument. Probably, however, some legislation may be necessary to furnish temporary relief and enable the court to get abreast of its business. The desired relief might be obtained by creating a supreme court commission for temporary service, which should take the burden of hearing, and recommending to the court for decision all civil cases where the

amount involved does not exceed \$2,000 United States money, and all criminal cases where the penalty provided by law to be imposed does not exceed two years' imprisonment. The effect of such a provision would be to relieve the supreme court from the drudgery of hearing a large number of cases in which comparatively small interests are involved, the smaller cases receiving not only the careful consideration of the courts of first instance, but also that of a commission of good lawyers or judges appointed for that purpose.

The amount of criminal business has during the past year, as for many years before, been largely in excess of the civil. Great numbers of people have been convicted of "bandolerismo," or robbery in hands, and much of the time of the court has been occupied in disposing of criminals of this character. The greater degree of good order that now prevails throughout the archipelago renders it probable that this branch of judicial duty will be much less in the coming year than in the past. The judges, native and American, have justified their appointments by the character of their work, and little criticism is made as to the administration of justice in the higher courts, aside from the delay in the supreme court. The prosecuting officers are substantially all Filipinos, and they, differing in efficiency, have on the whole performed their duties well.

The justices of the peace are all natives. In many of the smaller municipalities it has been difficult to find persons competent to perform the duties of this office, and consequently many changes have been necessary.

Under the policy adopted by the Commission of reducing the number of municipalities by consolidation some hardships have been imposed upon people living in remote portions of consolidated municipalities, who reside many miles from the office of the justice of the peace. To meet these difficulties it will probably be necessary to make some slight modifications in the law, so as to provide for more than one justice of the peace in certain of the consolidated municipalities, so that the local tribunals may be easily available to all the people. Under the new code of criminal procedure which is about to be adopted, as hereinafter stated, the labors of justices of the peace will be made more simple and can be more easily performed by men of limited education.

NEW LEGISLATION RELATING TO COURTS.

Comparatively little new legislation has been necessary in relation to the courts. Such legislation as has been enacted has been mainly for the purpose of meeting minor defects found in existing laws.

By Act No. 1019, passed December 3, 1903, the judge of the sixth judicial district was authorized to reside in the city of Manila and to exercise in that city certain interlocutory jurisdiction with respect to causes pending in his district.

By Act No. 1056, passed February 20, 1904, provision was made for court vacations for the courts of land registration and customs appeals and for leaves of absence of judges of those courts substantially on the same basis as had been previously provided with reference to judges of the courts of first instance.

By Act No. 1108, passed April 5, 1904, authority was given for the designation of any judge at large of the court of first instance to

perform the duties of a judge of the court of land registration in any province or in the city of Manila; authorizing the secretary of finance and justice to direct any register of deeds or provincial fiscal of any province to perform the duties of examiner of titles in his province; increasing the salary of the associate judge of the court of land registration after January 1, 1905, from \$4,000 to \$4,500 per annum; providing for the review of any order, decree, or decision of the court of land registration by the supreme court in substantially the same manner as orders, decrees, and decisions of the court of first instance are reviewed; giving the court of land registration power to issue a writ of possession placing an applicant for registration in possession of property covered by a decree of the court in his favor; authorizing the Government of the United States or of the Philippine Islands or of any province or municipality thereof and foreign corporations to apply for and secure registration of titles to lands through the court of land registration, and making minor provisions as to the proceedings in the court of land registration, including adequate arrangements for the employment of surveyors and the apportionment of their fees.

By Act No. 1123, passed April 27, 1904, authority was given to any court of first instance to conduct its proceedings in the English language or in a native dialect only, when all the parties or counsel so stipulate in writing, providing that in case the proceedings are in the English language only in the trial court the English record alone shall be used by the supreme court, the briefs being accompanied by a translation into the Spanish language; that in case exceptions are taken in courts of first instance, the original bills of exceptions and all documents which by the bills of exceptions are made a part thereof shall be transmitted to the supreme court instead of certified copies; providing for appeals to the supreme court by paupers without fees and without printed record; directing that when the supreme court may, under the law, review evidence taken in the court below, the testimony shall not be copied, but the original testimony on file and all documents constituting a part of the files in the case shall be transmitted to the supreme court and referred to on hearing. It has been found that great expense and delay were incurred by reason of the requirement that in all cases the record should be translated into the Spanish language before a case could be transmitted to the supreme court and that cases should be tried wholly in the Spanish language, although the judge and all the counsel and parties were accustomed to use the English language only, and desired its use. In many cases criminals who had been convicted in the courts of first instance were compelled to wait many months before the record could be transcribed into the Spanish language and transmitted to the supreme court. It has also been the rule of the supreme court that whenever the evidence taken in the court below was to be reviewed in the supreme court it must all be translated into the Spanish language and printed. In many cases these requirements resulted in a practical denial of the right of appeal, because the expense of translation and printing exceeded the ability of the parties. Printing bills of \$1,000 or more in a single case were not infrequent. In fact the expense of getting cases in readiness for trial in the supreme court often exceeded the whole value involved in the controversy. The relief furnished

by Act No. 1123 is very marked and was indispensable to an inexpensive and speedy administration of justice.

By Act No. 1153, passed May 11, 1904, most of the administrative duties relating to the bureau of justice, as well as the bureau of the insular treasurer, heretofore authorized by law to be performed by the civil governor, were directed to be performed by the secretary of finance and justice. Practically all of the administrative duties referred to had been performed by the secretary of finance and justice before the passage of this act, but every paper in each case had to be transmitted to the civil governor to be by him signed, and it was deemed advisable to have the final responsibility of these administrative duties rest upon the secretary of finance and justice instead of upon the civil governor.

COURT OF CUSTOMS APPEALS.

The court of customs appeals was reorganized by virtue of Act No. 864, as stated in the last annual report from this office, and no changes have since been made in its personnel.

Judge Crossfield, of the court of customs appeals, has performed duty by special assignment as judge of the court of first instance in the city of Manila and in the provinces of Rizal, Cavite, and Romblon. Judge Roxas likewise has performed similar duties in the provinces of Bulacan, Rizal, and Nueva Caceres. During the year 184 cases have been filed in the court and 159 have been disposed of. Forty-two cases are still pending. Most of the questions involving constitutional law that are liable to arise in that court have already been determined, and the number of appeals on that ground will hereafter doubtless be very few.

There is not enough work in the court to employ two judges, and for that reason it has been practicable to detail the judges for considerable work in the courts of first instance, as above stated.

The report of the clerk of the court of customs appeals is annexed to the report of the attorney-general, hereinafter referred to.

THE COURT OF LAND REGISTRATION.

Great progress has been made toward the settlement of land titles through the court of land registration during the past year. Up to September 1, 1903, 144 applications for registration of titles had been filed, and during the succeeding year 833 applications were received, being approximately 70 cases per month, making a total of 977 applications already filed. It is a very satisfactory fact that these applications have come from every part of the islands, 36 provinces or districts, including the city of Manila, being represented. This shows probably a more rapid progress than has occurred in the same length of time after the inauguration of the Torrens system of registration in any other country. Some of the applications cover immense haciendas and involve the title to lands occupied in individual cases by several thousand people. The controversies thus arising, of course, are burdensome to the court, but it is of vital importance to the owners and occupants of lands that the titles should be finally settled.

The disposition of cases has not been as rapid as was hoped, owing in part to the absence of one of the judges on leave for several months during the year, as well as to the great amount of time required in investigating cases where large haciendas were at stake.

The question as to whether prescription runs against the government is involved in more or less cases which have passed to the supreme court, and a final determination of that question will enable the court to make decrees with greater rapidity.

In this connection attention should be called to certain provisions of Act No. 926, the public-land act, which was passed by the Commission October 7, 1903, but which, by the provisions of the act of Congress approved July 1, 1902, entitled "An act temporarily to provide for the administration of the affairs of civil government of the Philippine Islands, and for other purposes," could not become effective until approved by the President of the United States and expressly or impliedly sanctioned by Congress. This act became effective upon the adjournment of the Congress and proclamation of the civil governor of the Philippine Islands under date of July 26, 1904. By virtue of Chapter VI of the public-land act, provision was made for the confirmation, through the court of land registration, of imperfect titles in favor of persons occupying public lands. Persons eligible to the benefits of these provisions are thus set forth in the act of Congress:

CHAPTER VI.—UNPERFECTED TITLES AND SPANISH GRANTS AND CONCESSIONS.

SEC. 54. The following-described persons or their legal successors in right, occupying public lands in the Philippine Islands, or claiming to own any such lands or an interest therein, but whose titles to such lands have not been perfected, may apply to the court of land registration of the Philippine Islands for confirmation of their claims and issuance of a certificate of title therefor, to wit:

1. All persons who prior to the transfer of sovereignty from Spain to the United States had fulfilled all the conditions required by the Spanish laws and royal decrees of the Kingdom of Spain for the purchase of public lands, including the payment of the purchase price, but who failed to secure formal conveyance of title;

2. All persons who, prior to the transfer of sovereignty from Spain to the United States, having applied for the purchase of public lands and having secured a survey, auction, and an award, or a right to an award, of such lands, did not receive title therefor through no default upon their part;

3. All persons who, prior to the transfer of sovereignty from Spain to the United States, having applied for the purchase of public lands and having secured a survey and award of same, did not, through negligence upon their part, comply with the conditions of full or any payment therefor, but who, after such survey and award, shall have occupied the land adversely, except as prevented by war or force majeure, until the taking effect of this act;

4. All persons who were entitled to apply, and did apply, for adjustment or composition of title to lands against the Government under the Spanish laws and royal decrees in force prior to the royal decree of February thirteenth, eighteen hundred and ninety-four, but who failed to receive title therefor through no default upon their part;

5. All persons who were entitled to a gratuitous title to public lands by "possessory proceedings" under the provisions of articles nineteen and twenty of the royal decree of the King of Spain, issued February thirteenth, eighteen hundred and ninety-four, and who, having complied with all the conditions therein required, failed to receive title therefor through no default upon their part; and

6. All persons who by themselves or their predecessors in interest have been in the open, continuous, exclusive, and notorious possession and occupation of agricultural public lands, as defined by said act of Congress of July first, nine-

teen hundred and two, under a bona fide claim of ownership, except as against the Government, for a period of ten years next preceding the taking effect of this act, except when prevented by war or force majeure, shall be conclusively presumed to have performed all the conditions essential to a Government grant and to have received the same, and shall be entitled to a certificate of title to such land under the provisions of this chapter.

All applicants for lands under paragraphs one, two, three, four, and five of this section must establish by proper official records or documents that such proceedings as are therein required were taken and the necessary conditions complied with: *Provided, however,* That such requirements shall not apply to the fact of adverse possession.

Provision was also made for the determination, by the court of land registration, of the titles of occupants of lands who should not voluntarily come in under the provisions of the act, so that, at the instance of the chief of the bureau of public lands, the titles of all such occupants could be determined.

The act also authorized the court of land registration to determine the right to all private lands, or interests therein, within any town sites that have been set apart in accordance with the provisions of the act. This act, by virtue of section 78 thereof, applies to all provinces and places in the Philippine Islands except the Moro Province, the provinces of Lepanto-Bontoc, Benguet, Paragua, and Nueva Viscaya. But it, or any chapter of it, may be made to apply at any time, by resolution of the Philippine Commission, to any of the provinces or parts of provinces last named, the purpose of these provisos being to enable the Commission to deal specially with public lands in the so-called non-Christian provinces, where land titles have been much more uncertain than in the Christian provinces and where the interests of the natives need to be especially protected and guarded by reason of their ignorance. The general provisions of the land-registration act were applicable to all provinces. In view of the provisions of section 78 of the public-land act, just referred to, it was deemed inexpedient to continue the jurisdiction of the court of land registration over lands situated in the non-Christian provinces. It was found that considerable portions of the public domain were being claimed by others than Filipinos under options of purchase obtained from the non-Christians, and attempts to perfect titles, through the court of land registration, were being made. Such attempts, if successful, would defeat the beneficent purpose of section 78 of the public-land act and render it probable that the Igorrotes and other non-Christian people would part with lands which ought to be secured to them or which ought to remain as a part of the public domain for very small considerations. Therefore, on the 31st day of August, 1904, Act No. 1224 was passed, providing that the court of land registration should not take cognizance of or have jurisdiction over applications for the registration of titles to land situated within the provinces aforesaid, except in certain specified instances named in the law. At the proper time suitable legislation will be enacted protecting the rights of actual occupants in the non-Christian provinces in the possession of their lands, but it is impracticable to deal with that subject in the same manner that lands in Christian and well-settled provinces are dealt with. The case being special, special legislation is required for the protection of the people inhabiting those provinces and for safeguarding the public domain. Such special legislation is familiar in the action

Number of charts received from the Coast and Geodetic Survey office in Washington from July 1, 1903, to June 30, 1904, 4,125.

The number of charts printed in Manila July 1, 1903, to June 30, 1904, was 3,366.

Between July 11 and February 2, besides duties in connection with chart verification, Mr. Charles C. Yates, assistant, was engaged in the preparation of preliminary plans and specifications for the construction of a launch and the Survey steamer which is now being constructed in Hongkong.

The Survey is indebted for many favors to other bureaus and offices of the general and insular governments, but particular acknowledgment must be made for valuable information and material help to the bureau of coast guard and transportation, the chief quartermaster, the chief engineer officer, and the chief signal officer of the United States Army in the Philippines; the bureau of engineering, and to the masters of the merchant marine, who attest by their ready response to our request for cooperation their appreciation of the efforts being made to improve up to the requirements of modern standards the charts and sailing directions of the Philippine Islands.

The cost of the survey, as in the past year, has been met by a division of expenses between the United States and the Philippine government. The United States has defrayed all the expenses for the field officers and experts detailed for service in the islands; the lithographing, engraving, and publishing of charts, and furnished the instrumental outfit and supplies from the United States. The Philippine government has defrayed the local field and office expenses, maintained the steamer *Research*, and is paying for the construction of the Survey vessel now building at Hongkong.

Two sketches are submitted herewith, which show graphically the extent of the field work for the period of this report.

THIRD ANNUAL REPORT
OF THE
SECRETARY OF FINANCE AND JUSTICE
TO THE
PHILIPPINE COMMISSION.

REPORT OF THE SECRETARY OF FINANCE AND JUSTICE.

DEPARTMENT OF FINANCE AND JUSTICE,
Manila, P. I., November 15, 1904.

GENTLEMEN: I hereby submit a report on matters, legislative and executive, pertaining to the department of finance and justice in the Philippine Islands during the period from September 1, 1903, to September 1, 1904.

Some of the data contained in this report are brought down to a date later than September 1, 1904, but unless otherwise stated this report will cover the year from September 1, 1903, to September 1, 1904.

ADMINISTRATION OF JUSTICE.

Prior to the date of the second annual report from this office to the Commission, November 6, 1903, new legislation had been enacted covering the subject of leaves of absence of judges, changing the times and places of holding the supreme court and rearranging the judicial districts and times and places of holding the court in each province, creating two additional judicial districts, revising certain provisions of law as to special terms of court, and making more adequate provision as to traveling expenses of judges, fiscals, and clerks.

Under the partial reorganization of the courts, as above stated, the administration of justice has been conducted throughout the islands in a manner on the whole satisfactory. The larger number of judges authorized by the legislation referred to has enabled the courts substantially to keep abreast of all litigation. Indeed, in some of the districts the judges have not been fully occupied and have been available for temporary transfers to other fields of labor. The liberal provisions of law for leaves of absence for judges enabled six of the judges, after three years' continuous service, to be absent from the Philippine Islands, in the United States or elsewhere, for practically five months each, from May 1 until October 1. But by temporary assignment of judges at large to special districts and by detailing judges of the court of customs appeals for duty in the courts of first instance the regular July, August, and September terms of every court of first instance have been held at the proper time and the dockets finished. The return of the absent judges, together with the utilization of the judges at large, will enable the regular subsequent terms to be held at the times fixed by law.

In the supreme court the situation has not been so fortunate. At the close of the court year, May 1, 1904, two of the judges of the

supreme court, the Hon. Charles A. Willard and the Hon. John T. McDonnough, much to the regret of the government, tendered their resignations, which were accepted. Both were able judges, and Judge Willard, by several years' service, had acquired a thorough knowledge of the Spanish language and of the law prevailing in the islands. His retirement from the insular service was a distinct loss to the judiciary. Judge McDonnough served for a shorter period, but had proven himself to be an able and upright jurist. At the same time that Judges Willard and McDonnough retired three other judges of the supreme court availed themselves of their five months' leave of absence, authorized by law after three years' service, and went to the United States, leaving but two judges of the supreme court on duty. The law requires five judges to constitute a quorum, and consequently the supreme court has been unable to hold sessions since the 1st day of May, 1904, the vacancies created by the resignation of Judges Willard and McDonnough not having been filled. This fact has resulted in a large accumulation of business in the supreme court, to the great detriment of the litigants and particularly to alleged criminals whose cases are pending in the supreme court. The court will probably be able to reconvene some time in December, with a bare quorum, should all the judges who are now holding office be in Manila and ready for service. It is not believed that this unfortunate condition will soon again arise.

On the 25th day of October, 1904, there were pending in the supreme court—

Civil cases	242
Criminal cases	591
Total	833

The number of cases disposed of by that court in the court year, from July 1, 1903, to May 1, 1904, either by trial and decision or otherwise, was 339.

No cases have been disposed of since the 1st of July owing to the want of a quorum in the court. The situation, therefore, is that if cases are not disposed of more rapidly by the supreme court in the future than in the past year it will be more than two years and a half before a case entered in the supreme court at this time or subsequently can be disposed of. This condition of affairs is most disastrous, and results in a practical denial of justice in many cases.

The difficulties arising from the want of a quorum during the first half of the court year of 1904 and 1905 will be corrected if the Philippine bill now pending in Congress is passed, one of the provisions of which is that in the absence of a quorum one or more judges of the court of first instance may be detailed to sit with the supreme court to constitute a quorum. This provision, however, does not strike at the root of the difficulty.

It is possible that the supreme court may be able to expedite the work which has accumulated by having longer hours for the hearing of cases and by restricting the length of time allowed for argument. Probably, however, some legislation may be necessary to furnish temporary relief and enable the court to get abreast of its business. The desired relief might be obtained by creating a supreme court commission for temporary service, which should take the burden of hearing, and recommending to the court for decision all civil cases where the

amount involved does not exceed \$2,000 United States money, and all criminal cases where the penalty provided by law to be imposed does not exceed two years' imprisonment. The effect of such a provision would be to relieve the supreme court from the drudgery of hearing a large number of cases in which comparatively small interests are involved, the smaller cases receiving not only the careful consideration of the courts of first instance, but also that of a commission of good lawyers or judges appointed for that purpose.

The amount of criminal business has during the past year, as for many years before, been largely in excess of the civil. Great numbers of people have been convicted of "bandolerismo," or robbery in hands, and much of the time of the court has been occupied in disposing of criminals of this character. The greater degree of good order that now prevails throughout the archipelago renders it probable that this branch of judicial duty will be much less in the coming year than in the past. The judges, native and American, have justified their appointments by the character of their work, and little criticism is made as to the administration of justice in the higher courts, aside from the delay in the supreme court. The prosecuting officers are substantially all Filipinos, and they, differing in efficiency, have on the whole performed their duties well.

The justices of the peace are all natives. In many of the smaller municipalities it has been difficult to find persons competent to perform the duties of this office, and consequently many changes have been necessary.

Under the policy adopted by the Commission of reducing the number of municipalities by consolidation some hardships have been imposed upon people living in remote portions of consolidated municipalities, who reside many miles from the office of the justice of the peace. To meet these difficulties it will probably be necessary to make some slight modifications in the law, so as to provide for more than one justice of the peace in certain of the consolidated municipalities, so that the local tribunals may be easily available to all the people. Under the new code of criminal procedure which is about to be adopted, as hereinafter stated, the labors of justices of the peace will be made more simple and can be more easily performed by men of limited education.

NEW LEGISLATION RELATING TO COURTS.

Comparatively little new legislation has been necessary in relation to the courts. Such legislation as has been enacted has been mainly for the purpose of meeting minor defects found in existing laws.

By Act No. 1019, passed December 3, 1903, the judge of the sixth judicial district was authorized to reside in the city of Manila and to exercise in that city certain interlocutory jurisdiction with respect to causes pending in his district.

By Act No. 1056, passed February 20, 1904, provision was made for court vacations for the courts of land registration and customs appeals and for leaves of absence of judges of those courts substantially on the same basis as had been previously provided with reference to judges of the courts of first instance.

By Act No. 1108, passed April 5, 1904, authority was given for the designation of any judge at large of the court of first instance to

perform the duties of a judge of the court of land registration in any province or in the city of Manila; authorizing the secretary of finance and justice to direct any register of deeds or provincial fiscal of any province to perform the duties of examiner of titles in his province; increasing the salary of the associate judge of the court of land registration after January 1, 1905, from \$4,000 to \$4,500 per annum; providing for the review of any order, decree, or decision of the court of land registration by the supreme court in substantially the same manner as orders, decrees, and decisions of the court of first instance are reviewed; giving the court of land registration power to issue a writ of possession placing an applicant for registration in possession of property covered by a decree of the court in his favor; authorizing the Government of the United States or of the Philippine Islands or of any province or municipality thereof and foreign corporations to apply for and secure registration of titles to lands through the court of land registration, and making minor provisions as to the proceedings in the court of land registration, including adequate arrangements for the employment of surveyors and the apportionment of their fees.

By Act No. 1123, passed April 27, 1904, authority was given to any court of first instance to conduct its proceedings in the English language or in a native dialect only, when all the parties or counsel so stipulate in writing, providing that in case the proceedings are in the English language only in the trial court the English record alone shall be used by the supreme court, the briefs being accompanied by a translation into the Spanish language; that in case exceptions are taken in courts of first instance, the original bills of exceptions and all documents which by the bills of exceptions are made a part thereof shall be transmitted to the supreme court instead of certified copies; providing for appeals to the supreme court by paupers without fees and without printed record; directing that when the supreme court may, under the law, review evidence taken in the court below, the testimony shall not be copied, but the original testimony on file and all documents constituting a part of the files in the case shall be transmitted to the supreme court and referred to on hearing. It has been found that great expense and delay were incurred by reason of the requirement that in all cases the record should be translated into the Spanish language before a case could be transmitted to the supreme court and that cases should be tried wholly in the Spanish language, although the judge and all the counsel and parties were accustomed to use the English language only, and desired its use. In many cases criminals who had been convicted in the courts of first instance were compelled to wait many months before the record could be transcribed into the Spanish language and transmitted to the supreme court. It has also been the rule of the supreme court that whenever the evidence taken in the court below was to be reviewed in the supreme court it must all be translated into the Spanish language and printed. In many cases these requirements resulted in a practical denial of the right of appeal, because the expense of translation and printing exceeded the ability of the parties. Printing bills of \$1,000 or more in a single case were not infrequent. In fact the expense of getting cases in readiness for trial in the supreme court often exceeded the whole value involved in the controversy. The relief furnished

by Act No. 1123 is very marked and was indispensable to an inexpensive and speedy administration of justice.

By Act No. 1153, passed May 11, 1904, most of the administrative duties relating to the bureau of justice, as well as the bureau of the insular treasurer, heretofore authorized by law to be performed by the civil governor, were directed to be performed by the secretary of finance and justice. Practically all of the administrative duties referred to had been performed by the secretary of finance and justice before the passage of this act, but every paper in each case had to be transmitted to the civil governor to be by him signed, and it was deemed advisable to have the final responsibility of these administrative duties rest upon the secretary of finance and justice instead of upon the civil governor.

COURT OF CUSTOMS APPEALS.

The court of customs appeals was reorganized by virtue of Act No. 864, as stated in the last annual report from this office, and no changes have since been made in its personnel.

Judge Crossfield, of the court of customs appeals, has performed duty by special assignment as judge of the court of first instance in the city of Manila and in the provinces of Rizal, Cavite, and Romblon. Judge Roxas likewise has performed similar duties in the provinces of Bulacan, Rizal, and Nueva Caceres. During the year 184 cases have been filed in the court and 159 have been disposed of. Forty-two cases are still pending. Most of the questions involving constitutional law that are liable to arise in that court have already been determined, and the number of appeals on that ground will hereafter doubtless be very few.

There is not enough work in the court to employ two judges, and for that reason it has been practicable to detail the judges for considerable work in the courts of first instance, as above stated.

The report of the clerk of the court of customs appeals is annexed to the report of the attorney-general, hereinafter referred to.

THE COURT OF LAND REGISTRATION.

Great progress has been made toward the settlement of land titles through the court of land registration during the past year. Up to September 1, 1903, 144 applications for registration of titles had been filed, and during the succeeding year 833 applications were received, being approximately 70 cases per month, making a total of 977 applications already filed. It is a very satisfactory fact that these applications have come from every part of the islands, 36 provinces or districts, including the city of Manila, being represented. This shows probably a more rapid progress than has occurred in the same length of time after the inauguration of the Torrens system of registration in any other country. Some of the applications cover immense haciendas and involve the title to lands occupied in individual cases by several thousand people. The controversies thus arising, of course, are burdensome to the court, but it is of vital importance to the owners and occupants of lands that the titles should be finally settled.

The disposition of cases has not been as rapid as was hoped, owing in part to the absence of one of the judges on leave for several months during the year, as well as to the great amount of time required in investigating cases where large haciendas were at stake.

The question as to whether prescription runs against the government is involved in more or less cases which have passed to the supreme court, and a final determination of that question will enable the court to make decrees with greater rapidity.

In this connection attention should be called to certain provisions of Act No. 926, the public-land act, which was passed by the Commission October 7, 1903, but which, by the provisions of the act of Congress approved July 1, 1902, entitled "An act temporarily to provide for the administration of the affairs of civil government of the Philippine Islands, and for other purposes," could not become effective until approved by the President of the United States and expressly or impliedly sanctioned by Congress. This act became effective upon the adjournment of the Congress and proclamation of the civil governor of the Philippine Islands under date of July 26, 1904. By virtue of Chapter VI of the public-land act, provision was made for the confirmation, through the court of land registration, of imperfect titles in favor of persons occupying public lands. Persons eligible to the benefits of these provisions are thus set forth in the act of Congress:

CHAPTER VI.—UNPERFECTED TITLES AND SPANISH GRANTS AND CONCESSIONS.

SEC. 54. The following-described persons or their legal successors in right, occupying public lands in the Philippine Islands, or claiming to own any such lands or an interest therein, but whose titles to such lands have not been perfected, may apply to the court of land registration of the Philippine Islands for confirmation of their claims and issuance of a certificate of title therefor, to wit:

1. All persons who prior to the transfer of sovereignty from Spain to the United States had fulfilled all the conditions required by the Spanish laws and royal decrees of the Kingdom of Spain for the purchase of public lands, including the payment of the purchase price, but who failed to secure formal conveyance of title;

2. All persons who, prior to the transfer of sovereignty from Spain to the United States, having applied for the purchase of public lands and having secured a survey, auction, and an award, or a right to an award, of such lands, did not receive title therefor through no default upon their part;

3. All persons who, prior to the transfer of sovereignty from Spain to the United States, having applied for the purchase of public lands and having secured a survey and award of same, did not, through negligence upon their part, comply with the conditions of full or any payment therefor, but who, after such survey and award, shall have occupied the land adversely, except as prevented by war or force majeure, until the taking effect of this act;

4. All persons who were entitled to apply, and did apply, for adjustment or composition of title to lands against the Government under the Spanish laws and royal decrees in force prior to the royal decree of February thirteenth, eighteen hundred and ninety-four, but who failed to receive title therefor through no default upon their part;

5. All persons who were entitled to a gratuitous title to public lands by "possessory proceedings" under the provisions of articles nineteen and twenty of the royal decree of the King of Spain, issued February thirteenth, eighteen hundred and ninety-four, and who, having complied with all the conditions therein required, failed to receive title therefor through no default upon their part; and

6. All persons who by themselves or their predecessors in interest have been in the open, continuous, exclusive, and notorious possession and occupation of agricultural public lands, as defined by said act of Congress of July first, nine-

teen hundred and two, under a bona fide claim of ownership, except as against the Government, for a period of ten years next preceding the taking effect of this act, except when prevented by war or force majeure, shall be conclusively presumed to have performed all the conditions essential to a Government grant and to have received the same, and shall be entitled to a certificate of title to such land under the provisions of this chapter.

All applicants for lands under paragraphs one, two, three, four, and five of this section must establish by proper official records or documents that such proceedings as are therein required were taken and the necessary conditions complied with: *Provided, however,* That such requirements shall not apply to the fact of adverse possession.

Provision was also made for the determination, by the court of land registration, of the titles of occupants of lands who should not voluntarily come in under the provisions of the act, so that, at the instance of the chief of the bureau of public lands, the titles of all such occupants could be determined.

The act also authorized the court of land registration to determine the right to all private lands, or interests therein, within any town sites that have been set apart in accordance with the provisions of the act. This act, by virtue of section 78 thereof, applies to all provinces and places in the Philippine Islands except the Moro Province, the provinces of Lepanto-Bontoc, Benguet, Paragua, and Nueva Viscaya. But it, or any chapter of it, may be made to apply at any time, by resolution of the Philippine Commission, to any of the provinces or parts of provinces last named, the purpose of these provisos being to enable the Commission to deal specially with public lands in the so-called non-Christian provinces, where land titles have been much more uncertain than in the Christian provinces and where the interests of the natives need to be especially protected and guarded by reason of their ignorance. The general provisions of the land-registration act were applicable to all provinces. In view of the provisions of section 78 of the public-land act, just referred to, it was deemed inexpedient to continue the jurisdiction of the court of land registration over lands situated in the non-Christian provinces. It was found that considerable portions of the public domain were being claimed by others than Filipinos under options of purchase obtained from the non-Christians, and attempts to perfect titles, through the court of land registration, were being made. Such attempts, if successful, would defeat the beneficent purpose of section 78 of the public-land act and render it probable that the Igorrotes and other non-Christian people would part with lands which ought to be secured to them or which ought to remain as a part of the public domain for very small considerations. Therefore, on the 31st day of August, 1904, Act No. 1224 was passed, providing that the court of land registration should not take cognizance of or have jurisdiction over applications for the registration of titles to land situated within the provinces aforesaid, except in certain specified instances named in the law. At the proper time suitable legislation will be enacted protecting the rights of actual occupants in the non-Christian provinces in the possession of their lands, but it is impracticable to deal with that subject in the same manner that lands in Christian and well-settled provinces are dealt with. The case being special, special legislation is required for the protection of the people inhabiting those provinces and for safeguarding the public domain. Such special legislation is familiar in the action

of the United States Congress relating to lands occupied by the Indians and in the dealings with uncivilized people in New Zealand and other parts of the world.

The report of the clerk of the court of land registration is hereto annexed and marked "Exhibit 1."

THE CRIMINAL CODE AND CODE OF CRIMINAL PROCEDURE.

As stated in the second annual report from this office, the criminal code prepared by Governor Wright had been brought up for public discussion in open session of the Commission. Those discussions continued for a considerable length of time and promised to continue for a length of time beyond the power of the Commission to give to that particular subject.

The Filipino lawyers objected to many sections of the proposed code, which was drawn largely on the lines of American law, although it incorporated many provisions of the existing Spanish Code. The result was that it was deemed expedient to see if a substantially unanimous result might not be accomplished by the appointment of a special commission or committee for the preparation of a suitable code of criminal law and procedure, on which committee the American and Spanish-Filipino views should be represented. Accordingly a committee was appointed, to consist of the Hon. Florentino Torres, Hon. E. Finlay Johnson, judges of the supreme court; Felipe Calderon, president of the Filipino College of Abogados (Filipino Bar Association), and Mr. W. L. Goldsborough, assistant attorney-general. Judge Torres has a very intimate knowledge of the Spanish criminal law and procedure, and Judge Johnson has not only a knowledge of American legislation and procedure on that subject, but also has had an extended experience in the Philippines as judge of the court of first instance and judge of the supreme court. Señor Calderon is a good representative of the Filipino opposition to the proposed code, and Mr. W. L. Goldsborough, the assistant attorney-general, has had sufficient experience under both American and Spanish procedure to make him a useful member of the committee. That committee has finished its labors and made a report, both upon penal law and procedure. The report was unanimous except that Messrs. Torres and Calderon have filed a separate report, indicating that in certain important respects it would be better to apply the Spanish law on the subjects referred to in their supplementary report.

The code, as drafted by the committee, retains as much of the Spanish Code as was deemed feasible, eliminating all those portions of it that refer to or are dependent on the sovereignty of Spain; incorporating substantially the postal laws of the United States; limiting to a considerable degree the right of private prosecutions which, under the Spanish régime, is said to have been utilized very largely for purposes of blackmail; omitting the provisions of the Spanish Code which bind the discretion of judges in the imposition of penalties, and substituting in place thereof the discretion of the judge, within limits defined by law; providing adequate civil remedies for injuries inflicted by criminal actions in proceedings distinct from the criminal prosecutions; abolishing all distinction as to nationality or race in the imposition of penalties, and prohibiting interlocutory appeals and simplifying the proceedings in all the courts.

The code, as drafted by this committee, with some modifications that have already been found to be necessary, will doubtless be enacted at an early date.

The committee made full use of all suggestions received in the prior public discussions, and are entitled to much credit for the patient, able, and conscientious manner in which they performed their duties.

CHANGES IN THE PERSONNEL OF THE COURTS.

Since the date of the last report from this office two vacancies have occurred in the office of judge of the supreme court, occasioned by the resignation of the Hon. Charles A. Willard and the Hon. John T. McDonnough, as above stated. These vacancies have not yet been filled, and great inconvenience has resulted from the want of a quorum in the supreme court. Accumulation of business in that tribunal is such that possibly some further legislation may be needed to prevent small criminal cases from being reviewed upon the facts by the supreme court.

Hon. Miguel Logarta, of Cebu, who was a judge at large, died February 13, 1904, and the Hon. Mariano Cui has been appointed to succeed him. Hon. Estanislao Yusay has been transferred from the tenth judicial district to the fifth judicial district, and the Hon. Vicente Jocson, of Bacolod, Occidental Negros, has been appointed to succeed him. The Hon. John C. Sweeny, who was judge at large, has been transferred to the city of Manila, and the Hon. Beekman Winthrop, of New York, was appointed to succeed him as judge at large. After a short period of service Judge Winthrop resigned to accept an appointment as governor of Porto Rico, and he has been succeeded by the Hon. James C. Jenkins, of Georgia, as judge at large. The remaining vacancy in the office of the judge at large has been filled by the appointment of the Hon. Charles S. Lobingier, of Omaha, Nebr. Judge Winthrop served but a few months before his transfer to Porto Rico, but in that short period demonstrated his fitness for large usefulness as a judge. Judge Jocson had served as judge of a court of first instance under the Spanish authorities and under the military government of the United States; was a lawyer of wide experience and established reputation for ability and probity. Judge Cui had seen considerable service as fiscal of the province of Cebu, where he had rendered most valuable services, and was highly recommended for promotion by the judges before whom he had conducted the business of prosecuting officer and by the bar and business men of the province of Cebu. Judge Jenkins was a lawyer of long experience and high reputation in the State of Georgia, and was highly recommended by the prominent jurists and public men of that State, irrespective of party. Judge Lobingier has had an extended experience as law writer and as lecturer in the law department of the University of Nebraska, as reporter of the decisions of the supreme court of that State, and as supreme court commissioner to hear cases as a judge in aid of the judges of the supreme court. Judge Logarta had served but a short time as judge at the time of his death. He was regarded as an upright and able jurist, and his death was greatly regretted by the public at large.

of the United States Congress relating to lands occupied by the Indians and in the dealings with uncivilized people in New Zealand and other parts of the world.

The report of the clerk of the court of land registration is hereto annexed and marked "Exhibit 1."

THE CRIMINAL CODE AND CODE OF CRIMINAL PROCEDURE.

As stated in the second annual report from this office, the criminal code prepared by Governor Wright had been brought up for public discussion in open session of the Commission. Those discussions continued for a considerable length of time and promised to continue for a length of time beyond the power of the Commission to give to that particular subject.

The Filipino lawyers objected to many sections of the proposed code, which was drawn largely on the lines of American law, although it incorporated many provisions of the existing Spanish Code. The result was that it was deemed expedient to see if a substantially unanimous result might not be accomplished by the appointment of a special commission or committee for the preparation of a suitable code of criminal law and procedure, on which committee the American and Spanish-Filipino views should be represented. Accordingly a committee was appointed, to consist of the Hon. Florentino Torres, Hon. E. Finlay Johnson, judges of the supreme court; Felipe Calderon, president of the Filipino College of Abogados (Filipino Bar Association), and Mr. W. L. Goldsborough, assistant attorney-general. Judge Torres has a very intimate knowledge of the Spanish criminal law and procedure, and Judge Johnson has not only a knowledge of American legislation and procedure on that subject, but also has had an extended experience in the Philippines as judge of the court of first instance and judge of the supreme court. Señor Calderon is a good representative of the Filipino opposition to the proposed code, and Mr. W. L. Goldsborough, the assistant attorney-general, has had sufficient experience under both American and Spanish procedure to make him a useful member of the committee. That committee has finished its labors and made a report, both upon penal law and procedure. The report was unanimous except that Mr. Goldsborough and Calderon have filed a separate report, indicating that in some important respects it would be better to apply the provisions of the Spanish Code referred to in their supplementary report.

The code, as drafted by the committee, is a compromise between the Spanish Code as was deemed feasible and the American Code. It contains provisions of it that refer to or are dependent upon the laws of Spain; incorporating substantially the provisions of the American Code; limiting to a considerable degree the power of the judge in prosecutions which, under the Spanish régime, were left to the discretion of the judge, largely for purposes of blackmail and other immoral purposes; abolishing the Spanish Code which bind the discretion of the judge in the imposition of penalties, and substituting in place of the discretion of the judge, within limits defined by law; providing for civil remedies for injuries inflicted by criminal acts, distinct from the criminal prosecutions; abolishing the distinction between the nationality or race in the imposition of penalties; abolishing the distinction between appeals and simplifying the procedure in the courts.

The code, as drafted by this committee, with some modifications that have already been found to be necessary, will doubtless be enacted at an early date.

The committee made full use of all suggestions received in the prior public discussions, and are entitled to much credit for the patient, able, and conscientious manner in which they performed their duties.

CHANGES IN THE PERSONNEL OF THE COURTS.

Since the date of the last report from this office two vacancies have occurred in the office of judge of the supreme court, occasioned by the resignation of the Hon. Charles A. Willard and the Hon. John T. McDonnough, as above stated. These vacancies have not yet been filled, and great inconvenience has resulted from the want of a quorum in the supreme court. Accumulation of business in that tribunal is such that possibly some further legislation may be needed to prevent small criminal cases from being reviewed upon the facts by the supreme court.

Hon. Miguel Logarta, of Cebu, who was a judge at large, died February 13, 1904, and the Hon. Mariano Cui has been appointed to succeed him. Hon. Estanislao Yusay has been transferred from the tenth judicial district to the fifth judicial district, and the Hon. Vicente has been appointed to succeed him. Judge Cui was judge at large, has been succeeded by the Hon. Beekman Winthrop, who has succeeded him as judge at large. After Judge Winthrop resigned to accept an appointment to the United States and he has been succeeded by Judge Yusay as judge at large. The vacancy at large has been filled by Judge S. Lobingier, of Omaha, Nebr. Judge Yusay, a few months before his transfer to the fifth judicial district, demonstrated his fitness for large cases and had served as judge of a court of first instance and under the military government as a lawyer of wide experience and probity. Judge Cui had been judge of the province of Cebu, where he was highly recommended for the position. He had conducted the business of the court and business men of the province and was of long experience and high character. Judge Yusay was highly recommended by the people of that State, irrespective of his previous extended experience as law clerk and member of the University of Nebraska, and as a judge of the supreme court of that State, where he had heard cases as a judge in aid of Judge Logarta had served but a few months. He was regarded as an excellent judge and was greatly regretted by the

of the United States Congress relating to lands occupied by the Indians and in the dealings with uncivilized people in New Zealand and other parts of the world.

The report of the clerk of the court of land registration is hereto annexed and marked "Exhibit 1."

THE CRIMINAL CODE AND CODE OF CRIMINAL PROCEDURE.

As stated in the second annual report from this office, the criminal code prepared by Governor Wright had been brought up for public discussion in open session of the Commission. The Filipino lawyers objected to many sections of the proposed code, which was drawn largely on the lines of American law, although it incorporated many provisions of the existing Spanish Code. The result was that it was deemed expedient to see if a substantially unanimous result might not be accomplished by the appointment of a special commission or committee for the preparation of a suitable code of criminal law and procedure, on which committee the American and Spanish-Filipino views should be represented. Accordingly a committee was appointed, to consist of the Hon. Florentino Torres, Hon. E. Finlay Johnson, judges of the supreme court; Felipe Calderon, president of the Filipino College of Abogados (Filipino Bar Association), and Mr. W. L. Goldsborough, assistant attorney-general. Judge Torres has a very intimate knowledge of the Spanish criminal law and procedure, and Judge Johnson has not only a knowledge of American legislation and procedure on that subject, but also has had an extended experience in the Philippines as judge of the court of first instance and judge of the supreme court. Señor Calderon is a good representative of the Filipino opposition to the proposed code, and Mr. W. L. Goldsborough, the assistant attorney-general, has had sufficient experience under both American and Spanish procedure to make him a useful member of the committee. That committee has finished its labors and made a report, both upon penal law and procedure. The report was unanimous except that Messrs. Torres and Calderon have filed a separate report, indicating that in certain important respects it would be better to apply the Spanish law on the subjects referred to in their supplementary report.

The code, as drafted by the committee, retains as much of the Spanish Code as was deemed feasible, eliminating all those portions of it that refer to or are dependent on the sovereignty of Spain; incorporating substantially the postal laws of the United States; limiting to a considerable degree the right of private prosecutions which, under the Spanish régime, is said to have been utilized very largely for purposes of blackmail; omitting the provisions of the Spanish Code which bind the discretion of judges in the imposition of penalties, and substituting in place thereof the discretion of the judge, within limits defined by law; providing adequate civil remedies for injuries inflicted by criminal actions in proceedings distinct from the criminal prosecutions; abolishing all distinction as to nationality or race in the imposition of penalties, and prohibiting interlocutory appeals and simplifying the proceedings in all the courts.

The code, as drafted by this committee, with some modifications that have already been found to be necessary, will doubtless be enacted at an early date.

The committee made full use of all suggestions received in the prior public discussions, and are entitled to much credit for the patient, able, and conscientious manner in which they performed their duties.

CHANGES IN THE PERSONNEL OF THE COURTS.

Since the date of the last report from this office two vacancies have occurred in the office of judge of the supreme court, occasioned by the resignation of the Hon. Charles A. Willard and the Hon. John T. McDonnough, as above stated. These vacancies have not yet been filled, and great inconvenience has resulted from the want of a quorum in the supreme court. Accumulation of business in that tribunal is such that possibly some further legislation may be needed to prevent small criminal cases from being reviewed upon the facts by the supreme court.

Hon. Miguel Logarta, of Cebu, who was a judge at large, died February 13, 1904, and the Hon. Mariano Cui has been appointed to succeed him. Hon. Estanislao Yusay has been transferred from the tenth judicial district to the fifth judicial district, and the Hon. Vicente Jocsón, of Bacolod, Occidental Negros, has been appointed to succeed him. The Hon. John C. Sweeny, who was judge at large, has been transferred to the city of Manila, and the Hon. Beekman Winthrop, of New York, was appointed to succeed him as judge at large. After a short period of service Judge Winthrop resigned to accept an appointment as governor of Porto Rico, and he has been succeeded by the Hon. James C. Jenkins, of Georgia, as judge at large. The remaining vacancy in the office of the judge at large has been filled by the appointment of the Hon. Charles S. Lobingier, of Omaha, Nebr. Judge Winthrop served but a few months before his transfer to Porto Rico, but in that short period demonstrated his fitness for large usefulness as a judge. Judge Jocsón had served as judge of a court of first instance under the Spanish authorities and under the military government of the United States; was a lawyer of wide experience and established reputation for ability and probity. Judge Cui had seen considerable service as fiscal of the province of Cebu, where he had rendered most valuable services, and was highly recommended for promotion by the judges before whom he had conducted the business of prosecuting officer and by the bar and business men of the province of Cebu. Judge Jenkins was a lawyer of long experience and high reputation in the State of Georgia, and was highly recommended by the prominent jurists and public men of that State, irrespective of party. Judge Lobingier has had an extended experience as law writer and as lecturer in the law department of the University of Nebraska, as reporter of the decisions of the supreme court of that State, and as supreme court commissioner to hear cases as a judge in aid of the judges of the supreme court. Judge Logarta had served but a short time as judge at the time of his death. He was regarded as an upright and able jurist, and his death was greatly regretted by the public at large.

of the United States Congress relating to lands occupied by the Indians and in the dealings with uncivilized people in New Zealand and other parts of the world.

The report of the clerk of the court of land registration is hereto annexed and marked "Exhibit 1."

THE CRIMINAL CODE AND CODE OF CRIMINAL PROCEDURE.

As stated in the second annual report from this office, the criminal code prepared by Governor Wright had been brought up for public discussion in open session of the Commission. Those discussions continued for a considerable length of time and promised to continue for a length of time beyond the power of the Commission to give to that particular subject.

The Filipino lawyers objected to many sections of the proposed code, which was drawn largely on the lines of American law, although it incorporated many provisions of the existing Spanish Code. The result was that it was deemed expedient to see if a substantially unanimous result might not be accomplished by the appointment of a special commission or committee for the preparation of a suitable code of criminal law and procedure, on which committee the American and Spanish-Filipino views should be represented. Accordingly a committee was appointed, to consist of the Hon. Florentino Torres, Hon. E. Finlay Johnson, judges of the supreme court; Felipe Calderon, president of the Filipino College of Abogados (Filipino Bar Association), and Mr. W. L. Goldsborough, assistant attorney-general. Judge Torres has a very intimate knowledge of the Spanish criminal law and procedure, and Judge Johnson has not only a knowledge of American legislation and procedure on that subject, but also has had an extended experience in the Philippines as judge of the court of first instance and judge of the supreme court. Señor Calderon is a good representative of the Filipino opposition to the proposed code, and Mr. W. L. Goldsborough, the assistant attorney-general, has had sufficient experience under both American and Spanish procedure to make him a useful member of the committee. That committee has finished its labors and made a report, both upon penal law and procedure. The report was unanimous except that Messrs. Torres and Calderon have filed a separate report, indicating that in certain important respects it would be better to apply the Spanish law on the subjects referred to in their supplementary report.

The code, as drafted by the committee, retains as much of the Spanish Code as was deemed feasible, eliminating all those portions of it that refer to or are dependent on the sovereignty of Spain, and incorporating substantially the penal laws of the United States, thus limiting to a considerable degree the right of private property, which, under the Spanish régime, is said to have been used largely for purposes of blackmail; omitting the provisions of the Spanish Code which bind the discretion of judges in the imposition of penalties, and substituting in place thereof the discretion of the jury within limits defined by law; providing adequate civil remedies for injuries inflicted by criminal actions in proceedings directed to criminal prosecutions; abolishing all distinction as to race in the imposition of penalties, and prohibiting appeals and simplifying the proceedings in all the criminal cases.

The code, as drafted by this committee, with some modifications that have already been found to be necessary, will doubtless be enacted at an early date.

The committee made full use of all suggestions received in the prior public discussions, and are entitled to much credit for the patient, able, and conscientious manner in which they performed their duties.

CHANGES IN THE PERSONNEL OF THE COURTS.

Since the date of the last report from this office two vacancies have occurred in the office of judge of the supreme court, occasioned by the resignation of the Hon. Charles A. Willard and the Hon. John T. McDonnough, as above stated. These vacancies have not yet been filled, and great inconvenience has resulted from the want of a quorum in the supreme court. Accumulation of business in that tribunal is such that possibly some further legislation may be needed to prevent small criminal cases from being reviewed upon the facts by the supreme court.

Hon. Miguel Logarta, of Cebu, who was a judge at large, died February 13, 1904, and the Hon. Mariano Cui has been appointed to succeed him. Hon. Estanislao Yusay has been transferred from the tenth judicial district to the fifth judicial district, and the Hon. Vicente Jocson, of Bacolod, Occidental Negros, has been appointed to succeed him. The Hon. John C. Sweeny, who was judge at large, has been transferred to the city of Manila, and the Hon. Beekman Winthrop, of New York, was appointed to succeed him as judge at large. After a short period of service Judge Winthrop resigned to accept an appointment as governor of Porto Rico, and he has been succeeded by the Hon. James C. Jenkins, of Georgia, as judge at large. The remaining vacancy in the office of the judge at large has been filled by the appointment of the Hon. Charles S. Lobingier, of Omaha, Nebr. Judge Winthrop served but a few months before his transfer to Porto Rico, but in that short period demonstrated his fitness for large judicial office. Judge Jocson had served as judge of a court of first instance under Spanish authorities and under the military government of the United States; was a lawyer of wide experience and of high reputation for ability and probity. Judge Cui had been a considerable seignior of the province of Cebu, where he had rendered most valuable services, and was highly recommended for the position by the judges before whom he had conducted the business of the court. He was a member of the bar and business men of the province. Judge Logarta was a lawyer of long experience and high reputation in the State of Georgia, and was highly recommended by the public men of that State, irrespective of political party. Judge Sweeny has had an extended experience as law professor in the law department of the University of Nebraska, and as a member of the supreme court of that State, and as a commissioner to hear cases as a judge in aid of the supreme court. Judge Logarta had served but a short time of his death. He was regarded as an able and conscientious man, and his death was greatly regretted by the

ATTORNEY-GENERAL'S OFFICE.

The full and satisfactory report of the attorney-general, giving a detailed description of the work of the bureau of justice, is hereto annexed and marked "Exhibit 2."

Attention has heretofore been called to the great accumulation of business in the supreme court, and that subject need not be again here discussed.

During the year 34 Americans and 113 Filipinos have taken the examinations for admission to the bar of the supreme court, of whom 24 Americans and 62 Filipinos were successful.

In the city of Manila 336 civil, 573 criminal, and 88 probate cases were disposed of. In the provinces 1,786 civil and 6,445 criminal cases were disposed of. At the close of the year there were 431 more civil cases than there were at the beginning of the year, but 539 less in the criminal branch.

The attorney-general, the solicitor-general, and their subordinates have furnished 537 opinions in accordance with the law; have made briefs for 316 cases in the supreme court, and have made recommendations on 776 applications for pardon.

The attorney-general recommends that his office be authorized to instruct justices of the peace in the several provinces in the performance of their duties. This recommendation is entirely approved and provisions will doubtless be made for what will be practically schools of instruction for that purpose. The supervisor of fiscals and his deputy and the assistant attorney-general of the Philippines Constabulary devote much of their time to the trial of important cases in the provinces. With the probable diminution of criminal business in the early future these officials will be able, under the direction of the attorney-general, to carry on advantageously the schools of instruction referred to. They will also be able to furnish important aid to the fiscals by instructing them in the methods of performing their duties.

The attorney-general calls attention to a hardship that is imposed upon witnesses in criminal cases who are obliged to leave their vocations and travel long distances to attend court and receive no compensation, nor are they furnished with food. The proposed new criminal code deals with this subject, and the needed-relief will doubtless be furnished by the enactment of that code. The hardship is real and the relief is necessary.

Three cases of great practical importance relating to the Philippine Islands have been determined by the Supreme Court of the United States during the year. In the cases of *Thomas E. Kepner v. The United States* and *Secundio Mendezona v. The United States* the Supreme Court of the United States, by a majority of five to four, held that the supreme court of the Philippine Islands had no right to review the findings of a court of first instance in criminal cases where the defendants had been acquitted in the courts of first instance. This decision reversed the practice which had prevailed under the Spanish law and likewise under the system of jurisprudence adopted under the American régime. The decision, of course, will be binding upon all the courts of the Philippine Islands.

In the case of *Edward F. O'Brien and Fred L. Dorr v. The United States* the Supreme Court of the United States determined that the

right of trial by jury in a criminal case did not, under the present law, exist in the Philippine Islands. This decision was reached by a vote of eight to one, and confirms the legality of the existing system of criminal jurisprudence in the islands in respect to jury trials. These cases were argued in the Supreme Court of the United States by the attorney-general for the Philippine Islands, the Hon. Lebbeus R. Wilfley, and by the Hon. Harry M. Hoyt, Solicitor-General of the United States, on behalf of the insular government.

INSULAR COLD STORAGE AND ICE PLANT.

Capt. Leon S. Roudiez, Twenty-fifth Infantry, U. S. Army, who had acted as the superintendent of the insular cold storage and ice plant from the time of its construction, retired from that position on the 1st day of September, 1903. Reports of the operations of the plant for the fiscal year 1903 and for the first two months of the fiscal year 1904, down to September 1, 1903, were annexed as exhibits to the second annual report from this office. Captain Roudiez was succeeded by Mr. Charles G. Smith as superintendent, who had charge of the operation of the plant during the remainder of the fiscal year 1904, since which time Mr. J. F. Edminston has been performing the duties of acting superintendent.

Under Mr. Smith's efficient administration the expenses of operation were largely reduced and the income from the sale of ice was materially increased. Owing to the increased demand for ice, an additional ice-making tank was installed in the plant, at an expense of about \$8,500 gold.

In May, 1904, the chief quartermaster of the Philippine Division of the United States Army entered into a contract for an additional cold-storage room, to be used largely as a salesroom for the commissary department of the army at a rental of \$15,000 gold per annum. This contract has been renewed for the fiscal year 1905, as was the contract for the rental of the other cold-storage rooms that was in force during the fiscal year 1904, and the contract in force in the fiscal year 1904 with the chief commissary for the furnishing of ice to the army has been renewed for the fiscal year 1905.

The report of Superintendent Smith for that portion of the fiscal year 1904 when he was in charge of the ice plant is hereto annexed and marked "Exhibit 3," and the report of Mr. Edminston, acting superintendent of the ice plant for the months of July and August, 1904, is also annexed hereto and marked "Exhibit 4."

The entire income for the fiscal year 1904 for cold storage, ice sales, and sale of distilled water and electric power amounts to ₱602,948.81, and the entire disbursements for that period amount to ₱395,622.18, leaving a net income for the plant for the fiscal year 1904 of ₱207,326.63.

The amount of space required by the army for cold storage during the fiscal year 1904 was materially less than that which had been required in prior years, by reason of which the income from cold storage was reduced, but the saving in operating expenses and the increase in the sale of ice have been such that the net income was not largely diminished. Included in expenditures were items for the installation of an additional freezing tank, which adds 18 tons of ice to the daily capacity of the plant, and keeping of the plant in good

condition during the year, the rebuilding of the rolling stock, and the overhauling and general repair of machinery whenever necessary.

The question of the future administration by the government or of the sale of the plant has been under consideration. It is considered that the fair value of the plant and land is not less than \$1,000,000 gold. Advertisements were inserted in newspapers in Manila and in the United States for competitive bids for its sale, with a minimum limit of \$1,000,000 gold. Bids were to be opened on the 29th of June, 1904. No bids were received, although more or less inquiries were made by parties who are still investigating the subject.

The plant is able to pay a moderate return to the insular government upon \$1,000,000 under the present system of administration. In the hands of a private corporation, which could economize still more in the cost of operation and could, by active competition, increase the amount of ice sold and cold-storage space rented, the property would be, it is believed, a very profitable investment on a purchase price of \$1,000,000 or more. There is no reason why the insular government can not continue to administer it as heretofore, the principal argument in favor of a sale being that it is undesirable for the government to be engaged in business that could be carried on by private individuals. But that argument is not especially effective in view of the governmental necessity for the furnishing of ice and cold storage at reasonable rates to the Army, to its officers, and to civil employees and hospitals, and in view of what the government has done in the way of carrying on what might be termed private enterprises in other directions, particularly in the bureau of the insular purchasing agent. A statement of the receipts and disbursements for the fiscal year 1904 is hereto attached and marked "Exhibit 5."

CURRENCY.

By far the most interesting problem in connection with the department of finance and justice during the past year has been the method of dealing with the currency. The evils of a fluctuating currency, resulting from the rise and fall in value of Mexican and Spanish-Filipino pesos and subsidiary coins in circulation in the islands, have been so fully detailed in former reports from this office that it is unnecessary here to repeat what has been there said. The great loss sustained by the government from the depreciation of Mexican currency in its value during the fiscal year 1903 did not continue during the fiscal year 1904, because that currency was mainly paid out before the commencement of the fiscal year 1904 and the loss had been sustained.

NEW COINAGE AND SEIGNIORAGE.

On March 2, 1903, Congress passed an act entitled "An act to establish a standard of value and to provide for a coinage system in the Philippine Islands."

As stated in the last report from this office, action was immediately taken by the Philippine Commission to put this act in force and to purchase silver and other metals for the new coinage, and to secure, through the Bureau of Engraving and Printing, at Washington, the silver certificates authorized by the act. The purchase of metal

for coinage continued until November 30, 1903, when it was believed that enough silver had been purchased for all necessary new coinage, taking into consideration the fact that the Spanish-Filipino coins in circulation in the islands were to be brought into the insular treasury, through agencies hereinafter to be mentioned, and recoined. Seventeen million three hundred and thirty-four thousand five hundred pesos in silver coins have been coined from bullion purchased. The total cost of bullion purchased was 14,745,981.30 pesos, an average of \$0.5453 gold per ounce fine. The mint charges for the coinage of this sum have been 419,673.60 pesos, and the expenses of transportation, insurance, etc., have been 45,114.41 pesos, showing a net seigniorage, less all charges, of 2,123,730.69 pesos.

Four hundred and ninety-nine thousand two hundred and fifty pesos in nickel coins have been received, upon which the net seigniorage, less all charges, has been 370,830.11 pesos.

Three hundred and thirty-six thousand seven hundred and seventy pesos in copper coins have been received down to September 2, 1904, upon which the net seigniorage, less all charges and expenses, has been 97,623.65 pesos. The result of the total coinage from metal purchased, therefore, has been a net seigniorage of 2,592,184.45 pesos, or one-half that sum in gold. Meanwhile the Spanish-Filipino coins have been gathered into the treasury in the manner hereinafter stated and none that have come into the treasury have been paid out, but all have been shipped to San Francisco for recoinage into the new currency. The process of eliminating the Spanish-Filipino coins from circulation is still going on and it is impracticable yet to give an accurate statement as to the result of such recoinage upon the seigniorage, in view of the high rate which the government has paid for those coins for the purpose of eliminating them. The results of recoinage will undoubtedly show an absolute loss, which must be deducted from the net seigniorage above stated in determining the final result to the gold-standard fund. The Spanish-Filipino pesos contain about 7 per cent less silver than the Mexican dollars, and the Spanish-Filipino subsidiary coins 12 per cent less, but during the time that the government was receiving both Mexican and Spanish-Filipino coins into the treasury it was not deemed expedient to make a distinction between the values that should be given to the two classes of money, because they have always passed side by side in the islands at the same value, and a distinction would complicate all business transactions by introducing an additional kind of money to be computed from day to day. It was also considered that the government owed an especial duty to the Spanish-Filipino coins as the lawful money of the country, which it did not owe to the Mexican coins, many of which had been introduced by smuggling in violation of the Spanish law and which could find a ready market in the adjacent countries of Asia, while no such opening was available to the Spanish-Filipino coins.

AMOUNT OF NEW COINS RECEIVED AND IN CIRCULATION.

All the new coins above referred to, minted from metal purchased, have been received in the islands. The recoinage of the Spanish-Filipino coins is still going on.

The total amount of the new currency received in the islands from bullion purchased and recoinage of Spanish-Filipino coins amounted

to 21,342,520 pesos on August 31, 1904. Since that date ₱3,582,000 have been received, making ₱24,924,520 of new coins in the islands on October 31, 1904. The new coins are received by each United States transport coming from San Francisco, and the Spanish-Filipino coins are transmitted to San Francisco for recoinage by each transport from Manila to San Francisco. The amount of new currency in actual circulation has been computed by the chief of the division of currency upon the basis of considering as in circulation all money outside of the treasury vaults except that held by depository banks in the city of Manila in excess of one-third of their Philippine currency demand liabilities. Upon that basis the new currency actually in circulation is shown for the several months from November, 1903, to September, 1904, inclusive, in the following table, together with the increase or decrease each month:

Philippine currency circulation.

	Amount in circulation.	Increase (+) or decrease (-).
Fiscal year 1903:	<i>Pesos.</i>	<i>Pesos.</i>
November.....	3,983,058.00	—
December.....	3,910,383.00	- 82,665.00
January.....	5,484,235.00	+1,573,902.00
February.....	6,231,827.00	+ 749,532.00
March.....	7,402,368.00	+1,168,541.00
April.....	6,718,799.00	- 683,569.00
May.....	8,226,114.00	+1,507,315.00
June.....	9,057,127.00	+ 831,013.00
Fiscal year 1904:		
July.....	10,481,955.00	+1,424,828.00
August.....	12,362,617.00	+1,880,662.00
September.....	14,253,799.69	+1,891,182.27
October.....	15,963,043.00	+1,709,243.00

It will be observed that the increase of circulation has been almost constant from month to month and has been very rapid. The amount so treated as actually in circulation is materially less than the amount of new currency received in the islands. This arises from the fact that large sums standing to the credit of disbursing officers in the insular treasury are not treated as in actual circulation, yet in a sense they are performing all the functions of money. If the new currency had not been introduced the same amounts to the credit of disbursing officers in the old currency or in United States currency would have been lying in the treasury awaiting disbursement, and the old currency in actual circulation would have been diminished by the same amount as now deducted from the total received. In that view the whole amount of the new currency received is performing its functions as a part of the circulating medium of the islands and ought properly to be considered as supplying to its full extent the vacuum created by the elimination of the old currency, and the process of filling that vacuum is constantly going on by the recoinage of the Spanish-Filipino coins.

There is nothing yet to indicate that there is not sufficient currency in the islands to meet all the demands of commerce. The banks have lying in their vaults a large amount of money unemployed in excess of the reserve which they are by law required to keep. The diminished producing power and consequent power of the people to buy, owing to war, pestilence, cattle diseases, diminution of the United

States army in the islands, and other causes, have necessarily resulted in a decrease in commercial demands for money. Should the prosperity of the islands, which is beginning to show itself to a large degree, continue to such an extent that more currency is required to meet all the necessities of business transactions, more bullion will be purchased and the demand will be met. But it is the fundamental basis of the maintenance of a silver currency upon a gold standard, without gold in actual circulation, that the coinage of silver should be restricted and never exceed the actual demand, so that the parity of gold and silver may be permanently maintained. This was the theory acted upon by the government of India in establishing the parity of exchange between the silver rupee and the gold pound sterling, and it is the theory upon which our coinage system is based. When there is an excess of the silver currency in circulation it should be retired and no more coinage made. If there is a deficiency it should be supplied by additional coinage or by the emission of coins provisionally retired.

ELIMINATION OF OLD CURRENCY.

During the first half of the calendar year 1903 large amounts of Mexican pesos were exported commercially, while the imports were small. This resulted, of course, in a diminution of the amount of currency in circulation in the islands and came about, in part, from the impending demonetization of the Mexican dollar in the Philippine Islands, and more from the needs of commerce, the imports of the islands being in excess of the exports, the balance being paid largely in Mexican pesos exported. From July, 1903, to August, 1904, inclusive, the total commercial import of Mexican pesos was Pfs.2,168,703, and the total commercial export in the same coin was Pfs.10,210,450, leaving a net export of Pfs.8,041,747. During substantially the same period new currency coined from metal purchased amounted to ₱18,170,520, as above stated. It thus appears that the new coinage brought in from metal purchased exceeded the Mexican coins exported by the sum of ₱10,128,773 during that period. During the same period there has been exported by the government Pfs. 9,218,000 Spanish-Filipino coins for recoinage, which, on being returned to the islands, will replace the Spanish-Filipino coins so exported. There has therefore been no reduction in the currency available for circulation in the islands since the beginning of July, 1903, aside from shipments of United States currency, of which complete statistics are not available, but rather a substantial increase, notwithstanding the fact that a considerable amount of Spanish-Filipino coins is either in the treasury awaiting shipment to San Francisco for recoinage or on the way to San Francisco, or in the mint at San Francisco, or being returned from San Francisco to Manila. There seems, therefore, to be no probability that the insular government will need to purchase silver for further coinage in the immediate future. These facts led to a cancellation of all orders for the purchase of bullion on July 7, 1904.

SILVER CERTIFICATES.

The circulation of the new silver certificates commenced in the month of October, 1903. Whenever a silver certificate is put into cir-

to 21,342,520 pesos on August 31, 1904. Since that date ₱3,582,000 have been received, making ₱24,924,520 of new coins in the islands on October 31, 1904. The new coins are received by each United States transport coming from San Francisco, and the Spanish-Filipino coins are transmitted to San Francisco for recoinage by each transport from Manila to San Francisco. The amount of new currency in actual circulation has been computed by the chief of the division of currency upon the basis of considering as in circulation all money outside of the treasury vaults except that held by depository banks in the city of Manila in excess of one-third of their Philippine currency demand liabilities. Upon that basis the new currency actually in circulation is shown for the several months from November, 1903, to September, 1904, inclusive, in the following table, together with the increase or decrease each month:

Philippine currency circulation.

	Amount in circulation.	Increase (+) or decrease (-).
Fiscal year 1903:	<i>Pesos.</i>	<i>Pesos.</i>
November	3,993,068.00	—
December	3,910,363.00	— 82,665.00
January	5,484,215.00	+1,573,902.00
February	6,283,827.00	+ 749,532.00
March	7,402,368.00	+1,168,541.00
April	6,718,799.00	— 683,569.00
May	8,226,114.00	+1,507,315.00
June	9,057,127.00	+ 831,013.00
Fiscal year 1904:		
July	10,481,955.00	+1,424,828.00
August	12,362,617.00	+1,880,662.00
September	14,253,799.69	+1,891,182.27
October	15,963,043.00	+1,709,243.00

It will be observed that the increase of circulation has been almost constant from month to month and has been very rapid. The amount so treated as actually in circulation is materially less than the amount of new currency received in the islands. This arises from the fact that large sums standing to the credit of disbursing officers in the insular treasury are not treated as in actual circulation, yet in a sense they are performing all the functions of money. If the new currency had not been introduced the same amounts to the credit of disbursing officers in the old currency or in United States currency would have been lying in the treasury awaiting disbursement, and the old currency in actual circulation would have been diminished by the same amount as now deducted from the total received. In that view the whole amount of the new currency received is performing its functions as a part of the circulating medium of the islands and ought properly to be considered as supplying to its full extent the vacuum created by the elimination of the old currency, and the process of filling that vacuum is constantly going on by the recoinage of the Spanish-Filipino coins.

There is nothing yet to indicate that there is not sufficient currency in the islands to meet all the demands of commerce. The banks have lying in their vaults a large amount of money unemployed in excess of the reserve which they are by law required to keep. The diminished producing power and consequent power of the people to buy, owing to war, pestilence, cattle diseases, diminution of the United

States army in the islands, and other causes, have necessarily resulted in a decrease in commercial demands for money. Should the prosperity of the islands, which is beginning to show itself to a large degree, continue to such an extent that more currency is required to meet all the necessities of business transactions, more bullion will be purchased and the demand will be met. But it is the fundamental basis of the maintenance of a silver currency upon a gold standard, without gold in actual circulation, that the coinage of silver should be restricted and never exceed the actual demand, so that the parity of gold and silver may be permanently maintained. This was the theory acted upon by the government of India in establishing the parity of exchange between the silver rupee and the gold pound sterling, and it is the theory upon which our coinage system is based. When there is an excess of the silver currency in circulation it should be retired and no more coinage made. If there is a deficiency it should be supplied by additional coinage or by the emission of coins provisionally retired.

ELIMINATION OF OLD CURRENCY.

During the first half of the calendar year 1903 large amounts of Mexican pesos were exported commercially, while the imports were small. This resulted, of course, in a diminution of the amount of currency in circulation in the islands and came about, in part, from the impending demonetization of the Mexican dollar in the Philippine Islands, and more from the needs of commerce, the imports of the islands being in excess of the exports, the balance being paid largely in Mexican pesos exported. From July, 1903, to August, 1904, inclusive, the total commercial import of Mexican pesos was Pfs.2,168,703, and the total commercial export in the same coin was Pfs.10,210,450, leaving a net export of Pfs.8,041,747. During substantially the same period new currency coined from metal purchased amounted to ₱18,170,520, as above stated. It thus appears that the new coinage brought in from metal purchased exceeded the Mexican coins exported by the sum of ₱10,128,773 during that period. During the same period there has been exported by the government Pfs. 9,218,000 Spanish-Filipino coins for recoinage, which, on being returned to the islands, will replace the Spanish-Filipino coins so exported. There has therefore been no reduction in the currency available for circulation in the islands since the beginning of July, 1903, aside from shipments of United States currency, of which complete statistics are not available, but rather a substantial increase, notwithstanding the fact that a considerable amount of Spanish-Filipino coins is either in the treasury awaiting shipment to San Francisco for recoinage or on the way to San Francisco, or in the mint at San Francisco, or being returned from San Francisco to Manila. There seems, therefore, to be no probability that the insular government will need to purchase silver for further coinage in the immediate future. These facts led to a cancellation of all orders for the purchase of bullion on July 7, 1904.

SILVER CERTIFICATES.

The circulation of the new silver certificates commenced in the month of October, 1903. Whenever a silver certificate is put into cir-

[illegible][illegible]

upon the comparative ease with which a fluctuating and cheap currency, to the amount of nearly ₱30,000,000 has been eliminated, in spite of the prejudices and conservative character of the people, and of the great inducement that always exists to make use of a cheaper currency instead of a better and more expensive one. The substitution of a stable currency in the place of an unstable and gambling one, which before existed, is one of the causes which will, no doubt, contribute largely to the now apparent return of prosperity to the islands.

EXCHANGE SOLD FROM THE GOLD-STANDARD FUND.

For the purpose of maintaining the parity of the Philippine currency with gold, exchange is sold at the treasury in Manila upon the depositories of the gold-standard fund in New York at a premium of three-fourths of 1 per cent for demand drafts and $1\frac{1}{4}$ per cent for telegraphic transfers. The law also authorizes similar sales in New York upon the treasury in Manila. No sales have been made in New York upon the funds in Manila, but during the fiscal year 1904 exchange was sold by the treasurer in Manila upon the funds in New York, including both drafts and telegraphic transfers, to the amount of \$3,338,955.03. During the same period the excess of imports into the islands over exports therefrom was \$2,995,064, not including currency imported or exported. The drafts sold in Manila on the gold-standard fund in New York are largely the means utilized for adjusting the adverse balance of trade, although large adjustments are also made by the export of currency or other agencies through banks.

HOW THESE RESULTS WERE ACCOMPLISHED.

The last report to the Commission from this office announced the passage of Act No. 938 (the gold-standard act) and set forth the important provisions of that act and the issuance of temporary certificates of indebtedness, amounting to \$3,000,000, for the maintenance of the gold-standard fund on May 1, 1903, and a second issuance of like certificates, to the same amount, on September 1, 1903. These were the first steps in placing the new currency upon a firm and permanent basis in pursuance of the act of Congress above referred to.

The first series of certificates of indebtedness, issued May 1, 1903, sold at a premium of 2.513 per cent; the second, issued September 1, 1903, sold at a premium of 2.24 per cent. On May 1, 1904, the first series was paid and a third series for the same amount issued, which sold at a premium of 1.181 per cent. On September 1, 1904, a fourth series was issued and sold at a premium of 1.41, the second series being retired by the proceeds thereof, each series being for \$3,000,000 and payable in one year. The total amount of certificates outstanding therefore is \$6,000,000. The premiums received varied according to the state of the bond market in the United States. The money realized from the sales of certificates was deposited in Government depositories in New York at such a rate of interest that the issuance of the certificates and the borrowing of money thereon has not been at any cost to the insular government, and has, on the whole, resulted in profit, taking into consideration the premiums at which the certificates were sold. The gold-standard fund now consists of the proceeds of the certificates sold, seigniorage

upon bullion purchased for coinage, earnings derived from the sale of exchange, and interest on deposits of its funds.

Very great pressure was brought to bear upon the Commission to redeem the old currency at what was called par—that is, to pay a peso of the new currency for a peso of the old; but this was deemed by the Commission to be impracticable. The amount of Mexican pesos in the islands was wholly a matter of conjecture, nor was the amount of Spanish-Filipino coins certain. Payment for the old coins at a parity with the new would have involved a very great loss to the insular treasury, undoubtedly far more than enough to extinguish the whole gold-standard fund, exclusive of the sum borrowed on the certificates of indebtedness. The danger of Mexican pesos being smuggled into the islands would have been great had an artificial value been given to them such as would have resulted had they been redeemed at par with the new pesos, which are upon a gold basis. After most careful consideration the Commission decided that it would treat the old coins as generously as the financial condition of the treasury would warrant, but would not redeem them peso for peso.

An ordinance was passed by the municipal board of the city of Manila requiring all merchants in the city to post notices in their stores in the English, Spanish, and Tagalog languages, stating in what currency their prices were fixed and at what rates they would receive other currencies circulating in Manila. Five thousand such placards were distributed free of charge to the merchants of the city.

On December 31, 1903, the government, pursuant to an announcement made several months before, discontinued receiving Mexican currency in payment of government dues, and on January 1, 1904, the civil governor issued an order providing for the redemption of Spanish-Filipino coins by the insular treasurer and the various provincial treasurers until July 1, 1904, at such official rates as should be fixed from time to time by executive order. It further directed that the said currency should be received by the government in settlement of governmental dues until October 1, 1904, after which date it would cease to be so received, and would be redeemable at the option of the government only at bullion value.

On January 26, 1904, the Commission adopted a resolution as follows:

Whereas the treasurer of the Philippine Islands has made arrangements with the four banks in Manila which have government deposits, whereby said banks will return to him Spanish-Filipino coins in payment of his checks upon the government deposits, irrespective of the question as to whether the deposits were made in Spanish-Filipino coins or Mexican; and

Whereas this furnishes a convenient and feasible method of converting all the local currency received by the government into Spanish-Filipino coins, which may be transmitted to San Francisco for recoinage; * * * Be it therefore

Resolved, That it is the sense of the Commission that the retirement of the Spanish-Filipino coins would be facilitated by affording means for the replacement of the Mexican pesos in the provinces by the new Philippine currency, through the agency of the provincial treasurers, and the disposition of the Mexican in the manner above provided, and that the civil governor be requested to authorize and direct the provincial treasurers to receive Mexican dollars in exchange for Philippine currency at the authorized rate of exchange between Spanish-Filipino coins and Philippine currency, and transmit the coins so received to the insular treasurer, such order to continue in force so long as the treasurer is able to continue the arrangements that he has made with the banks for withdrawing Spanish-Filipino coins for recoinage in lieu of all deposits of local currency in the banks.

On January 14, 1904, Act No. 1042, entitled "An act for the purpose of maintaining the parity of the Philippines currency, in accordance with the provisions of sections 1 and 6 of the act of Congress approved March 2, 1903, by prohibiting the importation into the Philippine Islands of certain kinds of coins," was passed, prohibiting the importation of local currency into the islands. This act received the general approval of the public. On the same date there was submitted for the consideration of the Commission a draft of a bill providing for heavy taxation of transactions in the old currency after certain dates. This bill, on January 27, 1904, after much public discussion, was enacted into law as Act No. 1045, entitled "An act for the purpose of providing revenue and of maintaining the parity of the Philippines currency, in accordance with the provisions of sections 1 and 6 of the act of Congress approved March 2, 1903, by providing for the purchase of Mexican dollars as bullion, by imposing a tax upon written contracts payable in certain kinds of currencies, and by requiring the payment of a license tax by all persons, firms, or corporations conducting their current business, either wholly or in part, in said currencies, and for other purposes." It imposed an ad valorem tax upon contracts and other legal instruments payable in local currency and drawn or negotiated after September 30, 1904, and upon bank deposits in local currency held thereafter, and requires a special license tax from all merchants doing business in local currency after December 31, 1904. Suitable provisions were made for the protection of existing old currency contracts, and exempting from taxation funds deposited to meet local currency contracts made prior to October 1, 1904, and formally registered. Provisions were also made for the adjustment in the new currency of contracts subsequently maturing payable in the old currency. It will be observed that, aside from the prior notice that had been given to the public as to the demonetization of the old currency, the public were given until October 1, 1904, and January 1, 1905, to dispose of their old currency on fair and profitable terms. Pursuant to the provisions of the act last referred to, nearly 100,000 copies of a pamphlet explaining the new currency system and the more important laws and regulations pertaining to the exchange of the old for the new were prepared in the various dialects and distributed to every municipality and there proclaimed by "bandillo" or town crier.

On March 23, 1904, the Commission adopted a resolution authorizing the treasurer of the Philippine Islands and the provincial treasurers to exchange Philippine currency and nickel coins for copper coins which circulated in the Philippine Islands at substantially the official rate proclaimed as to silver coins. The copper coins have not yet been largely eliminated, but steps looking to the early accomplishment of that result are to be adopted. Under the provisions of the laws aforesaid, 9,078,330.29 pesos of the Spanish-Filipino currency were exchanged through the insular treasury for the new currency between October, 1903, and September 1, 1904. Nearly all of the old currency so purchased has been shipped to San Francisco for recoinage. Repeated applications have been made to the Commission asking for still further extensions of time for the elimination of the old currency and for the imposition of the taxes provided in Act No. 1045, above referred to, but the Commission has constantly

refused to make such extensions, both upon the ground that sufficient time had already been given to the public to prepare for the change and sufficient facilities had been furnished to facilitate the exchange of the old coins for the new, and because it was considered to be in the interests of the general public that uncertainty should not longer continue and that the transition period should be made as short as possible.

The Secretary of War has furnished aid of the utmost importance in the inauguration of the new currency system by authorizing quartermasters and paymasters in the Philippine Islands to make payments in the new currency. As appropriations for the United States Army are in money of the United States, the effect of this order has been to render large amounts of United States money available to the insular government for the purposes of exchange, and to issue therefor Philippine currency, which has been distributed from one end of the archipelago to the other through the disbursements made by the quartermasters and paymasters of the Army. This system has not only greatly facilitated the wide circulation of the new currency, but has likewise furnished a constant replenishment of United States money for the purpose of redeeming Philippine currency presented at the treasury.

It ought also to be remarked that the Treasury Department of the United States has in every way cooperated with the work to be accomplished, not only by facilitating the transfer of funds from the insular depositories in the United States to the insular depositories in the Philippine Islands and the reverse, but likewise by a most prompt and efficient aid in the mintage of the new coins and in the work of engraving and printing the silver certificates. In fact, the maintenance of the gold standard would have been much more difficult had it not been for the cooperation of the Treasury Department in the United States in making the transfers aforesaid without the necessity for the actual transmission of money to and fro. The action of the Secretary of the Treasury in authorizing the deposit of Philippine certificates of indebtedness by national banks as security for United States Government deposits in the banks likewise added materially to the selling value of these certificates and thereby operated greatly to the advantage of the insular treasury.

The intelligent and instructive report of the chief of the division of currency is hereto annexed and marked "Exhibit 6," wherein can be found the details of the various currency transactions that have occurred during the year past. It ought perhaps to be remarked that since the final determination of the government to eliminate the old currency by the means above stated the banks of Manila have cooperated with the government in its effort to expedite the establishment of the new currency upon a gold basis and to eliminate the old currency.

The insular government likewise had the benefit of the valuable advice of Prof. Jeremiah W. Jenks, professor of economics in Cornell University and a member of the International Monetary Conference Committee appointed by the President of the United States for the purpose of attempting to secure an international agreement in regard to the use of silver as money.

In all steps taken for the sale of certificates of indebtedness, for the purchase of silver for recoinage, the arrangement of interest on the deposit of gold-standard funds in New York, looking after the details

of coinage and shipment of coin, the efforts of Col. Clarence R. Edwards, U. S. Army, Chief of the Division of Insular Affairs, War Department, have been most constant, and his services have been of great value to the insular government.

BANKS AND BANKING.

During the period covered by this report no new banks have been established in the Philippine Islands. A large Chinese bank is said to be in process of formation, to have its headquarters at Manila. The Guaranty Trust Company of New York has withdrawn from the islands and transferred its business in the Philippine Islands to the International Banking Corporation of Connecticut. The funds of the insular government in the islands not retained in the treasury vaults have been distributed between the Chartered Bank of India, Australia, and China, the Hongkong and Shanghai Banking Corporation, and the International Banking Corporation, all authorized depositories for funds of the United States Government and of the government of the Philippine Islands. At the close of the fiscal year 1904 funds belonging to the insular treasury were distributed as follows:

Bank balances.	Philippine currency.	United States currency.	Local cur- rency.
Hongkong and Shanghai Bank	\$262,870.04	\$3,994.55	\$356,380.33
Chartered Bank of India	721,728.37	6,990.96	390,940.06
International Banking Corporation	243,972.57	4,979.93	762,783.06
Special deposit, International Banking Corporation, Manila	500,000.00		
Guaranty Trust Company at New York		7,297,277.01	
International Banking Corporation, at Washington, D. C.		3,891,232.48	
Merchants' Laclede National Bank, St. Louis		31,873.28	
In transit, United States mint, San Francisco		482.90	
In hands treasurer, Cebu, for exchange	110,349.50		
Insular treasury	2,205,889.50	2,115,394.82	1,013,141.32
Total	3,984,810.07	13,352,135.93	2,532,245.57

The status of the American Bank, so called, remains as stated in the last report from this office.

The Spanish-Filipino Bank has strenuously urged that the issue by the government of silver certificates is in violation of the bank's alleged exclusive right to issue paper money in the islands.

Upon the recommendation of this office, the Commission, on the 19th day of May, 1904, took action as shown by the following excerpt from its minutes:

The president presented a communication, dated November 6, 1903, from the managers of the Banco Español-Filipino, protesting against the issuance of silver certificates by the government, claiming that said certificates are, in fact, demand notes, and that the charter of the Banco Español-Filipino gives to it exclusive right to issue demand notes. This communication had been considered by the secretary of finance and justice, who had indorsed it as follows:

"The Spanish-Filipino Bank within protests against the issue and circulation by the treasury of the Philippine Islands of the silver certificates placed in circulation by it as constituting a violation of the chartered and vested rights of that bank. The communication is dated November 6, 1903. It is to be observed, primarily, that the issuing of the silver certificates, substantially as authorized by the Congress of the United States, was discussed and recommended in the successive reports of the secretary of finance and justice to the

refused to make such extensions, both upon the ground that sufficient time had already been given to the public to prepare for the change and sufficient facilities had been furnished to facilitate the exchange of the old coins for the new, and because it was considered to be in the interests of the general public that uncertainty should not longer continue and that the transition period should be made as short as possible.

The Secretary of War has furnished aid of the utmost importance in the inauguration of the new currency system by authorizing quartermasters and paymasters in the Philippine Islands to make payments in the new currency. The status of the American Bank, so called, remains as stated in the last report from this office.

The Spanish-Filipino Bank has strenuously urged that the issue by the government of silver certificates is in violation of the bank's alleged exclusive right to issue paper money in the islands.

Upon the recommendation of this office, the Commission, on the 19th day of May, 1904, took action as shown by the following excerpt from its minutes:

The president presented a communication, dated November 6, 1903, from the managers of the Banco Español-Filipino, protesting against the issuance of silver certificates by the government, claiming that said certificates are, in fact, demand notes, and that the charter of the Banco Español-Filipino gives to it exclusive right to issue demand notes. This communication had been considered by the secretary of finance and justice, who had indorsed it as follows:

"The Spanish-Filipino Bank within protests against the issue and circulation by the treasury of the Philippine Islands of the silver certificates placed in circulation by it as constituting a violation of the chartered and vested rights of that bank. The communication is dated November 6, 1903. It is to be observed, primarily, that the issuing of the silver certificates, substantially as authorized by the Congress of the United States, was discussed and recommended in the successive reports of the secretary of finance and justice to the

Philippine Commission, and in the reports of the Philippine Commission to the Secretary of War for two or three years prior to the 6th day of November, 1903, which documents were published, and presumably were well known to the managers of the Spanish-Filipino Bank. The legislation by the Congress of the United States, in pursuance of those recommendations, enacted on March 2, 1903, was thoroughly discussed in both Houses of Congress and in the committees intrusted with the preparation of the act finally enacted, and those matters were all of public notoriety and of such publicity and notoriety that the Spanish-Filipino Bank must be presumed to have had the fullest notice of the contemplated action. After the enactment of the act of Congress of March 2, 1903, authorizing the issue of the silver certificates, immediate steps were taken to procure the engraving of suitable plates for the certificates and for the printing thereof, and they were duly prepared at large expense and transmitted to the civil governor of the Philippine Islands, and by him delivered to the treasurer and issued in accordance with the provisions of law. Many of them were in actual circulation before the 6th day of November, 1903. Down to that date there had not been, to my knowledge, the slightest intimation from the Spanish-Filipino Bank that it regarded the act of Congress as an invasion of the rights of the bank in any respect, or the preparation of the plates and engravings and of the certificates themselves and the issue thereof. Had the bank called the attention of Congress to the claim that the issue of such certificates was in violation of its chartered rights, its claim would have doubtless received due consideration, and the bank could not have been deemed to have slept on its alleged rights. Their long silence in this behalf ought to be deemed an acquiescence in the legislation and an agreement on their part that they would not in any way oppose the issue of certificates, but that they were content to have them issued, not deeming them to be in any respect a violation of the chartered rights of the bank.

"But, irrespective of the effect of this acquiescence, I am of the opinion that the claim and protest of the bank is not well founded. It is unnecessary at this point to go into a discussion of the question as to whether the charter of the bank, wherein it claims an exclusive right to issue circulating notes in the Philippine Islands until January 1, 1928, is or is not valid, or as to whether that alleged right is or is not protected by the treaty of Paris, or as to whether the issuing of that which is money is not so clearly a governmental function that the treaty of Paris, like any other law, can not be deemed to have contemplated a binding of the American Government not to exercise the ordinary functions of a government and not to make adequate provision for the expanding needs of commerce for the issuance of circulating money to meet those needs.

"For the purposes of the present question, it seems to me that it is a sufficient and satisfactory reply to say that the silver certificates are not demand notes within the meaning of the law or within the meaning of the language of the charter of the Spanish-Filipino Bank. There is no law which makes such certificates money, in the technical sense of the term. They are not made legal tender for private debts in the Philippine Islands. The act of Congress referred to provides that 'the gold coins of the United States and the silver Philippine pesos shall be the sole legal-tender money of the Philippine Islands.' Section 8 of that act is the one which authorizes the issue of the silver certificates. By its terms the treasurer of the Philippine Islands is authorized, in his discretion, to receive deposits of the standard silver coins of one peso, authorized by the act to be coined, in sums of not less than 20 pesos, and to issue silver certificates therefor in denominations of not less than 2 or more than 10 pesos, and coin so deposited shall be retained in the treasury and held for the payment of such certificates on demand, and used for no other purpose. They are certificates authenticating that silver pesos have been deposited at the treasury to redeem them and authorizing the bearer to present them at the treasury and receive such pesos. No person is compelled to receive them in payment of a debt due him. The government, by said section 8, is required to receive the certificates for customs duties and taxes and public dues, because the government has in its own vaults silver which they represent. Any banking association may count them as a part of its lawful reserve, because its lawful reserve might be in pesos, and the pesos are at hand awaiting the presentation of the certificates. They do not possess the essential elements of money; they are not the promise of any government or banking institution to pay money for them. They are a convenience devised by the government for the transaction of business with paper certificates in lieu of the heavy coins that would otherwise require transportation from place to place in the business of the islands. They are not as

nearly money as the certificates or notes that were issued by individuals during the civil war in the United States, wherein they promised to pay the sums stated in the notes issued upon demand. Such private papers were never recognized as money and had no legal status. While the silver certificates have a legal status, it is not a legal status of money or circulating notes.

"It should be remarked that the utmost limit of circulating notes that could be issued by the Spanish-Filipino Bank by the terms of its charter is three times its paid-up capital if those provisions are valid and binding. Such an amount of paper representative of money values is totally inadequate to the business of the islands, and the law ought not to be strained for the purpose of protecting a monopoly that hampers every business enterprise. No strained construction of the law is required to substantiate the views here suggested."

After consideration by the Commission, on motion, it was

Resolved, That the protest of the Spanish-Filipino Bank, dated November 6, 1903, against the issuance of silver certificates by the treasury of the Philippine Islands as a violation of its chartered rights is not deemed to be well founded, for the reasons stated in the indorsement by the secretary of finance and justice, and that the Spanish-Filipino Bank be notified of this conclusion.

No further action has yet been taken.

The Spanish-Filipino Bank has likewise strenuously urged that its exclusive right to the issuance of paper money ought to be recognized, and to the full extent of the rights claimed under its charter; that is, to issue such paper money to three times the amount of its paid-up capital. The action of the Commission upon this subject is shown by its resolution as follows, adopted on the 17th day of May, 1904, which was transmitted to the bank:

Commissioner Ide presented to the Commission a communication, dated April 4, 1904, from Mr. Eugenio del Saz Orozco, director of the Banco Español-Filipino, relative to the present status of that bank, which communication had been indorsed by the secretary of finance and justice as follows:

"Señor Orozco, director of the Banco Español-Filipino, within requests that he 'be favored with the resolution of the civil government in the matter of the claim submitted by the Spanish-Filipino Bank more than two years ago for the recognition in their integrity of the statutes and charter of that bank as conferred upon it by the Spanish Government, and more especially in connection with the exclusive right of issue of demand notes payable to bearer conferred by such statutes and charter.' Señor Orozco urges authoritative determination, so that the matter may be laid before the stockholders of the bank, and states that the management has experienced great embarrassment from its inability to inform the stockholders of the action of the government.

"There has never been, to my knowledge, two years ago or at any other time, a request that the civil government determine the status of the Spanish-Filipino Bank in the respect referred to. There was correspondence in September, October, November, and December, 1901, in relation to the desirability of the bank's restricting its issue of circulating notes or paper money to the amount of its paid-up capital, the authorities at Washington having stated that such a course ought to be taken in the interests of conservative banking and for the safety of the bill holders. An interview upon the whole subject of the bank's status was had at my office on the 22d day of November, 1901, between the secretary of finance and justice, Señores Balbas and La Rosa, managing directors of the bank, and the committee appointed by the shareholders of that bank, consisting of Señores Alonso and Ossorio and their attorney, Mr. Marple. That interview covered the whole subject of the claim of the bank under its charter, and likewise the objections that had been presented at Washington to the exercise of the rights claimed by the bank. The interview was for the purpose of ascertaining if some working basis could not be arrived at, and a transcript of the interview was subsequently forwarded to the Secretary of War at Washington, and was in the possession of Governor Taft when appearing before the House and Senate committees while he was in the States on account of ill health. The correspondence referred to with the bank officials outlined the legislation relating to banking in the Philippine Islands, which it was proposed to ask Congress to enact, and the bank officials were furnished with a copy of the act proposed, as approved by the Commission and by Mr. Conant, the financial expert sent here by the Secretary of War. All this occurred before the end of the year 1901.

After discussion at Washington, the whole banking features of Philippine legislation were eliminated entirely, and ultimately a new system of currency was authorized, which has been put in force, but no action whatever has been taken by Congress toward the establishment of a banking system in the islands. The regulation of banking, like all other business enterprises of the islands, is doubtless within the competence of the Commission, but it is not probable that the Commission, at present at least, and without further legislation by Congress, will undertake to deal with the subject of banks with power to issue paper money; nor is it deemed to be indispensably necessary that such action should be taken immediately. The new currency system is becoming rapidly well established in the islands, and further financial experiments are undesirable for the immediate present. Meanwhile the Spanish-Philippine Bank furnishes a small amount of paper money which passes among the people, and United States paper money is quite extensively in circulation. The silver certificates issued by the government, in response to the deposit of Philippine pesos, likewise furnish a convenient means of carrying on business transactions. It will thus appear that the claims of the bank and the views of the insular government have been presented to Congress, and no action has by it been taken.

"There are many special features in the charter of the Banco Español-Filipino, to some of which attention is here called.

"Paragraph 11 of article 4 of title 1 of the charter reads: 'To contract (or deal) with the treasury of the islands under its own guaranty through its branches, but with the previous consent and authority of the minister for the colonies.'

"It is apparent that the power thus referred to can only be exercised by virtue of the authority of the minister for the colonies. There is no minister for the colonies that is now authorized to exercise any power in these islands. This paragraph probably is not capable of effective operation without additional legislation.

"Paragraph 12 of article 4, same title, reads: 'To issue loans to the provinces or its municipal territories with the previous consent and authority of the protector and the constitution of proper security.'

"The provinces and municipalities are not, to my knowledge, vested with power to borrow money from banks or to incur indebtedness in the way of borrowing money; nor would it be prudent to intrust the municipalities or the provinces with such general power. Nor is the intervention of the 'protector' in such matters authorized by any existing law. This paragraph does not seem to be self-operative without further legislation.

"Paragraph 18, article 4, of the same title, reads: 'To arrange with the minister for the colonies, or its representatives, duly authorized to that effect, for the emission and negotiation of public bonds, for the payment of the same, or for any other service of the treasury.'

"For the reasons above stated, this paragraph does not seem to be effective without further legislation.

"Article 15 of the same title provides that 'The bank possesses the private (or individual) power to issue paper money throughout the archipelago, payable to bearer upon demand, for three times the amount of its cash capital set aside, subject to article 180 of the Code of Commerce, provided a reserve fund in metallic cash is kept on hand in the bank amounting to at least a fourth part of the deposits, currency accounts in metallic cash, and bank notes in circulation. The denominations which it may issue are of 5, 10, 25, 50, 100, and 200 pesos.'

"It is under this article that the bank claims the exclusive right to issue paper currency to the amount of three times its paid-up capital, subject to the provisos referred to. The word 'privativo' in the Spanish or original charter is translated in my copy 'private' or 'individual,' but proper translation of which the bank claims to be 'exclusive,' instead of 'private' or 'individual.' Doubtless this provision would not have prevented the Spanish Government from printing or issuing its own money and circulating medium, nor is it at all certain that a transference of the sovereignty would prevent the new sovereign from exercising one of the highest functions of sovereignty in the issuance and regulation of money of all kinds. It is likewise certain that, whatever efficacy may be given to this article, the new sovereignty has the power to enact necessary regulations for the security of the public, for the safeguarding of that which is received as money by the public in general, and for the abundant protection of depositors and holders of the securities of this or any other bank. From this position the Commission has not deviated at any time. But

the kind of legislation that ought to be enacted to accomplish these results has not yet been finally determined upon. This article doubtless is the one in regard to which the bank is more solicitous than it is in regard to any other.

"Article 16 authorizes the bank to be a party to actions instituted to prosecute parties forging or falsifying the bank's paper money. It would seem apparent that the question of whether a private individual or corporation can be a party to a criminal prosecution would be determined by the general law of the country, which may be altered from time to time, as it pertains to criminal remedies and not to any chartered or vested rights of the institution.

"Article 17 requires the approval of the minister for the colonies as to the establishment of branches of the bank and as to their location. This article would not seem to be effective without further legislation.

"Article 18 is one of considerable importance. It reads as follows: 'Foreigners may become stockholders in the bank and participate in all exchange and banking transactions in the same form as the nationals, but they can not hold any position in the management or administration of the bank unless they become naturalized and ask to be residents of the country. All accounts belonging to foreigners in the hands of the bank shall be exempted from all attachment, confiscation, and reprisal in case of war declared against their respective countries.

"The term 'foreigners,' as introduced into the charter, probably meant all persons who were not subjects of the Crown of Spain, and such persons were excluded from holding any position in the management of the bank unless they became naturalized. Under such construction all Americans would be foreigners. It would be impossible for them to become naturalized within the meaning of that term—that is, become citizens of Spain by virtue of any law now existing. The anomalous condition would therefore exist of there being a bank in an American country, under American sovereignty, from the management of which all Americans were excluded. It is not clear that Filipinos could take part in the management of the bank. They are no longer Spanish subjects, nor can they be naturalized by any law yet enacted. This whole article is anomalous and needs careful revision.

"Article 20 makes it the duty of the bank to loan to the treasury of the archipelago, without interest, \$500,000 when its capital is not over \$1,500,000, and one-third of its capital when it exceeds that amount, for periods not exceeding six months of each year; and also compels the bank to loan further sums, at rates of interest to be agreed upon—practically 1½ per cent less than the current discount to the public—with the proviso that such interest shall not exceed 5 per cent per annum. This privilege has never been exercised by the Insular government, nor did the article apparently contemplate the loan to a different sovereignty than that of Spain. It is not clear that this article, without further legislation, is effective.

"Article 23, fixing the capital at \$1,500,000, in shares of \$200 each, apparently provides for an increase of capital to the amount of \$3,000,000 when authorized by the stockholders in general meeting. Inasmuch as article 15 is claimed to authorize the issuance of paper to the amount of three times the paid-up capital, article 23 becomes important. It is quite manifest that the bank ought not to be allowed, at its own discretion, to increase its capital when such increase carries with it an increase in the amount of paper money set afloat, and when the government might deem such increased amount of paper money to be highly dangerous.

"Article 26 provides for the retention of 1,000 shares, which shall be nontransferable, until the corporation holding them shall seek to dispose of them and His Majesty's Government shall so order; and also, in order that the shares may become subject to an attachment, an order from competent authority must be issued. It is probable that these shares belong to some religious corporation. If so, it would not be in accordance with the theory of our government that the property should be inalienable, nor would it be a proper thing to be obliged to resort to the authorities of the Spanish Government to alienate them, nor should they be exempt from attachments any more than any other private property. This article needs revision.

"Article 30 provides that, after payment of expenses, a reserve fund of 10 per cent shall be set aside for the 'direccion,' and 5 per cent for the 'junta de gobierno,' the remaining 85 per cent being divided among the stockholders pro rata. This article is not specially objectionable, if the stockholders desire to have it enforced, except in so far as the constitution of the 'junta de gobierno' and of the 'direccion' are perhaps objectionable, as hereinafter stated.

"Under title 4 the following provision appears, probably as article 33, though not numbered in my copy: 'The high management and superior régime of the bank shall be vested in the protector, the governor-general, who may temporarily delegate a person of his trust to act in his behalf as such protector and in such part as he may deem proper, provided such deputy is a member of the council of administration or is vested with a like authority.'

"This article seems to make the governor-general the protector of the bank. He was a Spanish officer, appointed by the Crown of Spain. Such was the intent and meaning of the charter when granted. Whether the chief executive of the islands under American sovereignty could exercise such powers it is unnecessary now to determine, although the matter ought to be definitely settled, both as to whether he can exercise those powers and as to whether he ought to. Further legislation by the Commission would perhaps be required to intrust the civil governor with those powers. It is not known that the power has ever been exercised by the civil governor either to act as protector or to appoint a deputy to perform such portions of his functions as he might deem proper.

"Under article 35 the powers of the protector are defined: 'First. To appoint the directors, the secretary, and one of the syndics, to be selected by him from the ternary (consisting of three persons) lists, as proposed by the stockholders in general meeting.'

"Under this provision the stockholders select three persons for directors and from them the protector appoints those who are to act.

"Second. To appoint of his choice the other syndic, omitting the requisite of a ternary.'

"This paragraph apparently authorizes the protector to appoint one syndic irrespective of the wishes of the stockholders.

"Third. To determine the issues of stock.'

"It will be seen that this authority is large and great. It would also seem to be apparent that there could be no increase above the \$1,500,000 stock now issued without the consent of the protector. It would seem, therefore, that until the civil governor assumes the duties of protector, by legislation of the Commission or otherwise, no authority could grant the right to increase the stock of the bank above its present issue.

"Fourth. To approve the rates of interest fixed by the bank on discounts and loans.'

"This provision probably gives the protector power to veto rates of interest fixed, and perhaps to establish other rates.

"Fifth. To suspend or detach from their respective positions all directors or members of the Junta de Gobierno should there be sufficient cause to justify such suspension.'

"This power is a very important one.

"Sixth. To resolve gubernatively all differences and doubts which may arise on matters relating to the interior management or the observance of the present statutes and regulations of the bank.

"Seventh. To order the revision of the statutes or the regulations of the bank when he may think so proper, or at the request of the stockholders in general meeting.'

"This power is one of very great importance.

"Eighth. To exercise all the powers which the law confers upon him as a representative of His Majesty's Government over all public institutions which are protected and franchised.'

"It will be seen, therefore, that the bank was intended by its charter to be in a sense a government institution, and that the theory of its charter contemplated that it should be under the immediate control and largely the absolute protection of the protector or governor-general. None of these powers have ever been exercised by the civil governor, and it is not clear that it should be the policy of the government to assume such large responsibilities for the conduct and management of a bank. It is probable that it might be more in line with American theory and institutions that such legislation should be enacted as would make the bank a self-governing institution, but subject to suitable laws for expansion and regulation, such as may be deemed necessary for safeguarding the stockholders, depositors, and note holders.

"Under article 36 the deputy protector is intrusted with large powers, such as calling meetings of stockholders, calling meetings of the Junta de Gobierno, presiding over general meetings; and, fourth, 'To order the suspension of all reso-

lutions passed by the stockholders in general meeting or by the Gobierno at the request of any of the syndics when they conflict with the statutes and regulations.'

"Fifth. To supervise and manage all the departments of the bank and to submit for approval to the protector any changes and additions they may wish to make or remarks to offer in the interests of the institution.

"Sixth. To assist in person in the count of "cash" and the preparation of the "balance" sheet, which must be done every month, and certifying in the proper book over his signature to the correctness thereof.

"Seventh. To answer all extraordinary reports required by the protector upon the bank's affairs after examining into the books, documents, and papers of the institution.'

"Inasmuch as there has not been since the complete establishment of American sovereignty in the islands any exercise of the powers of protector by the civil governor, or any appointment of a deputy protector, nor appointment of syndics by the protector, it is not apparent how the bank's affairs have been lawfully conducted, and it is not seen how, under the terms of the charter, the bank could have gone on legally in the conduct of its business. It would seem that its procedure must be subject to very grave doubts as to its legality and that steps ought to be taken to put the bank into such a situation that there can be no question as to the legality of the acts of its officers. The situation of bank officers who are conducting the business illegally and not in accordance with the provisions of the charter might prove to be a very unhappy one. These provisions seem greatly to need revision.

"Article 41 makes it the duty of the general stockholders' meeting of the bank, among other things: 'Third. To submit to the protector, through the hands of the bank's direction, ternary lists (containing three names) to fill the positions of directors, secretary, and one of the syndics.'

"This course could not have been followed since American occupancy, there being no protector or deputy protector acting.

"Article 45 likewise provides for the appointment of a second syndic by the protector, and article 46 provides that that syndic shall remain in office four years.

"Article 48 provides that the councilors and syndics shall be entitled to a fee for attendance at all sessions, and states that the fee is already provided for in article 29. Article 29 makes no provision in regard to this matter and relates to an entirely different subject. It is possible that there is a mistake in the translation.

"Under article 50 the authority of the syndics is defined. Their powers are important, and among others is the following: 'Fourth. To prevent thereupon the issuance of bank paper to a greater amount than that authorized by these statutes.'

"It would seem that without the lawful appointment of a syndic by the protector there could be no further issue of bank paper.

"Article 55 requires the Junta de Gobierno to submit, through the direction of the bank, a list of qualified persons from which the protector may appoint parties to fill the vacancies temporarily occurring. This article would seem not to be of efficiency unless there were a protector duly authorized by law to act.

"Title X, under the head of General Rules, reads: 'Unless by virtue of a judicial order, the bank is not permitted to give out any statement of the deposit of current account of any given person.'

"Perhaps this rule is not objectionable, but the law upon this subject should be general and applicable to all banks in the interest of justice.

"In view of the foregoing extracts from the charter of the bank a serious question likewise arises as to whether, under all the circumstances, the bank has any legal status under American sovereignty, and as to whether its provisions are not so interwoven with the Spanish sovereignty that there is no method of lawfully executing the provisions of the charter under a different sovereignty unless new legislation shall intervene. Under the American definition, a charter constitutes a contract between the state and the corporation chartered. Many of the provisions of the charter of the Spanish-Philippine Bank are in the nature of contracts of such a character that a stranger to those contracts can not be made a party to them without a revision of the charter itself. For instance, the provision that the bank shall loan one-third of its capital six months of the year to the government without interest, and other portions of its capital to the government at a low rate of interest, was a compact to make

those loans to a known government with which it was dealing, not with a third party who was a stranger to the whole contract. Suppose the insurrectionary Filipino government had succeeded in establishing itself. The principles of the international law which the bank invokes would have preserved its charter rights under the new government, but it would be a somewhat strained construction of law that would, under the charter, require the bank to make the loans referred to the insurrectionary Filipino government when that government might have been totally insolvent. It never contracted to make such advances to the American Government, to the Filipino government, or to any other government except the Spanish Government. But those provisions for loans are the considerations in part which the bank, as one contracting party, made to the Spanish Government, the other contracting party, for its privilege of existence, for its alleged monopoly in the issuance of paper money, and for the special protection which the government threw around it through the Protector and Syndic. Through every portion of the charter runs the current of an intimate contract made with the Crown of Spain, whereby duties and rights appertain to each, which are mutually interdependent. It is a serious question as to whether, under these circumstances, the duties and obligations which the Spanish Crown had assumed could be divested from it and transferred to the American Government. The law officers of the United States have uniformly refused to recognize the obligation of the United States or of the insular government to pay to the Manila Railway Company (Limited) a bonus in the form of a guaranty of earnings which the Government of Spain had made to that railroad company in its charter, upon the ground that the contract was with the Government of Spain, and that neither by principles of international law nor by the treaty of Paris did the United States assume any of the obligations incurred by the Crown of Spain.

"A full discussion of this subject may be found in Magoon's Reports, page 177. So far as the Spanish Government was bound by the terms of the franchise in question, its obligations to the bank apparently remained unimpaired by the treaty of cession, the United States having paid to Spain \$20,000,000, largely in view of the assumption of any debts or obligations of the Spanish Government in relation to the ceded territory. This appears from the protocols of the treaty. Probably a correct view of the law on this subject is stated in Hall on International Law, pages 101 and 102, in discussing the correspondence between the United States and England with reference to the authority exercised by England over the Mosquito Shore, and to a treaty between Great Britain and Mexico, wherein the distinguished author says:

"Mr. Buchanan's general statement was accurate, but the very fact that Mexico succeeded to all the territorial rights of Spain, and consequently to full sovereignty within the territory of the republic, shows that it could not be burdened by limitations on sovereignty to which Spain had chosen to consent. It possessed all the rights appertaining to an independent state, disencumbered from personal contracts entered into by the state from which it had severed itself."

"Upon the principle here stated, the obligations which the Spanish Government had assumed to the Spanish-Filipino Bank were personal obligations which remained binding upon the two contracting parties, and which the Government of the United States never assumed by the treaty of cession. It would also seem that all the rights of full sovereignty were secured by the United States by the treaty of cession without being burdened with limitations on that sovereignty to which Spain has chosen to consent, except so far as the treaty protects vested property rights. So far as those property rights rested in contracts with the Crown of Spain, and where there were mutual contracts to be fulfilled, and where the Government of the United States had strenuously refused in the negotiations to assume any of the obligations of Spain, the situation is entirely different from that which exists where the Government of Spain had assumed privileges and rights to parties who now, under the new sovereignty, are entitled to the protection of such vested rights.

The purpose of this indorsement to enter into a discussion of this subject, these suggestions are made only for the purpose of showing the necessity for a change in the conditions now surrounding the Spanish-Filipino Bank, and for the purpose of calling to the attention of the Commission the question as to whether the bank, under the special circumstances, is in a status that is capable of vindication in the courts.

The correspondence above referred to, which occurred near the close of 1900, the bank officials stated, in substance, that while they claimed

that their privilege of note issue was an exclusive one, yet they did not consider monopolies of that character to be desirable, nor did they expect that the American Government would submit to having its paper-money circulation in the Islands limited in the manner provided by their charter, because it was not sufficiently elastic to meet the probable increase of the demands of commerce, and because such a privilege ought not to be controlled exclusively by one private institution; yet they insisted that the privilege was one that appertained to the bank by competent authority, and one that had been protected in the amplest manner by the treaty of Paris, whereby the Philippine Islands were ceded to the United States, and that the United States Government should abolish the exclusive rights which the bank claimed, either by an agreement with that bank or by expropriation of the exclusive privilege and paying just compensation therefor; and proposed to surrender the bank's exclusive privilege, receiving in compensation therefor an exemption from all taxation during the whole period covered by its charter, the exemption to apply to all of its circulation, and to its stock, deposits, and assets of every kind; this being upon the basis that the bank should continue to issue its paper currency only up to the amount of its paid-up capital, but that the right should not be exclusive.

"In my opinion there is a hardship imposed upon the bank by not being more certain as to what its legal status is. Its request, contained in the within letter, that there should be an authentic determination of its status is not entitled as a right to any reply or determination. The bank has been allowed to do business and none of its chartered rights, so far as lawfully exercised and in harmony with existing laws and protected by the obligations imposed by the treaty of Paris, have as yet been interfered with. It has no just cause for complaint by reason of any action of the government. The demand for such an extensive exemption from all taxation was deemed by the Commission to be inordinate and unreasonable, and one that could not be entertained. It is for the interests of the bank and of the government that the status of so important an institution should be clearly known, and that it should not continue or attempt to continue doing business upon an unlawful basis. Some of the provisions of the charter above stated are of such a character that it is impossible for the bank to proceed without grave doubts as to the legality of its procedure; it needs legislation for its own protection and for the protection of its note holders, depositors, and stockholders. In my opinion the interests of the government and of the bank in this respect are alike, and the charter ought to be amended in such manner as to safeguard the public, the officers of the bank, and the rights of the government itself. Such amendments of the charter doubtless ought to be made with the concurrence of the stockholders of the bank, so that no legal questions as to the amendments might subsequently arise. The amendments ought to provide, on the one hand, for such changes as will secure the certain legality of the acts of the officers in the management of the bank, and sufficient protection to safeguard the interests of all, and for a restriction of the amount of paper currency which it might issue to the amount of its paid-up capital, with or without security, as may be determined, and provisions should also be made that all the paper money issued should constitute a prior charge upon all the assets of the bank. On the other hand, the exclusive privilege of the bank, if it has it, ought to be eliminated and done away with forever, so that at the proper time a comprehensive banking system may be established, such as will provide for the indispensable needs of commerce by authorizing a sufficient supply of paper currency."

After consideration by the Commission, on motion, it was

Resolved, That a copy of the foregoing indorsement by the secretary of finance and justice be transmitted to the Spanish-Filipino Bank, and that the said institution be requested to appoint a committee to confer with the secretary of finance and justice, and with such other members of the Commission, if any, as may be designated to act with him in regard to modifications of the charter of the bank, so that a scheme may be devised that shall be just to the government, to the bank, and to the public at large.

No reply to this communication has been received from the bank and no further recommendation is now made upon this subject.

It should, however, be remarked that by section 111 of Act No. 1189, entitled "An act to provide revenue for the support of the insular, provincial, and municipal governments by internal taxation," a tax of 1 per cent per month was imposed upon all circulating notes issued

those loans to a known government with which it was dealing, not with a third party who was a stranger to the whole contract. Suppose the insurrectionary Filipino government had succeeded in establishing itself. The principles of the international law which the bank invokes would have preserved its charter rights under the new government, but it would be a somewhat strained construction of law that would, under the charter, require the bank to make the loans referred to to the insurrectionary Filipino government when that government might have been totally insolvent. It never contracted to make such advances to the American Government, to the Filipino government, or to any other government except the Spanish Government. But those provisions for loans are the considerations in part which the bank, as one contracting party, made to the Spanish Government, the other contracting party, for its privilege of existence, for its alleged monopoly in the issuance of paper money, and for the special protection which the government threw around it through the Protector and Syndic. It possessed all the rights appertaining to an independent state, disencumbered from personal contracts entered into by the state from which it had severed itself."

"Upon the principle here stated, the obligations which the Spanish Government had assumed to the Spanish-Filipino Bank were personal obligations which remained binding upon the two contracting parties, and which the Government of the United States never assumed by the treaty of cession. It would also seem that all the rights of full sovereignty were secured by the United States by the treaty of cession without being burdened with limitations on that sovereignty to which Spain has chosen to consent, except so far as the treaty protects vested property rights. So far as those property rights rested in contracts with the Crown of Spain, and where there were mutual contracts to be fulfilled, and where the Government of the United States had strenuously refused in the negotiations to assume any of the obligations of Spain, the situation is entirely different from that which exists where the Government of Spain had granted privileges and rights to parties who now, under the new sovereignty, seek protection of such vested rights.

"It is not the purpose of this indorsement to enter into a discussion of this question, and these suggestions are made only for the purpose of showing the great necessity for a change in the conditions now surrounding the Spanish-Filipino Bank and for the purpose of calling to the attention of the Commission the serious question as to whether the bank, under the special circumstances, has any legal status that is capable of vindication in the courts.

"In the correspondence above referred to, which occurred near the close of the year 1901, the bank officials stated, in substance, that while they claimed

that their privilege of note issue was an exclusive one, yet they did not consider monopolies of that character to be desirable, nor did they expect that the American Government would submit to having its paper-money circulation in the islands limited in the manner provided by their charter, because it was not sufficiently elastic to meet the probable increase of the demands of commerce, and because such a privilege ought not to be controlled exclusively by one private institution; yet they insisted that the privilege was one that appertained to the bank by competent authority, and one that had been protected in the amplest manner by the treaty of Paris, whereby the Philippine Islands were ceded to the United States, and that the United States Government should abolish the exclusive rights which the bank claimed, either by an agreement with that bank or by expropriation of the exclusive privilege and paying just compensation therefor; and proposed to surrender the bank's exclusive privilege, receiving in compensation therefor an exemption from all taxation during the whole period covered by its charter, the exemption to apply to all of its circulation, and to its stock, deposits, and assets of every kind; this being upon the basis that the bank should continue to issue its paper currency only up to the amount of its paid-up capital, but that the right should not be exclusive.

"In my opinion there is a hardship imposed upon the bank by not being more certain as to what its legal status is. Its request, contained in the within letter, that there should be an authentic determination of its status is not entitled as a right to any reply or determination. The bank has been allowed to do business and none of its chartered rights, so far as lawfully exercised and in harmony with existing laws and protected by the obligations imposed by the treaty of Paris, have as yet been interfered with. It has no just cause for complaint by reason of any action of the government. The demand for such an extensive exemption from all taxation was deemed by the Commission to be inordinate and unreasonable, and one that could not be entertained. It is for the interests of the bank and of the government that the status of so important an institution should be clearly known, and that it should not continue or attempt to continue doing business upon an unlawful basis. Some of the provisions of the charter above stated are of such a character that it is impossible for the bank to proceed without grave doubts as to the legality of its procedure; it needs legislation for its own protection and for the protection of its note holders, depositors, and stockholders. In my opinion the interests of the government and of the bank in this respect are alike, and the charter ought to be amended in such manner as to safeguard the public, the officers of the bank, and the rights of the government itself. Such amendments of the charter doubtless ought to be made with the concurrence of the stockholders of the bank, so that no legal questions as to the amendments might subsequently arise. The amendments ought to provide, on the one hand, for such changes as will secure the certain legality of the acts of the officers in the management of the bank, and sufficient protection to safeguard the interests of all, and for a restriction of the amount of paper currency which it might issue to the amount of its paid-up capital, with or without security, as may be determined, and provisions should also be made that all the paper money issued should constitute a prior charge upon all the assets of the bank. On the other hand, the exclusive privilege of the bank, if it has it, ought to be eliminated and done away with forever, so that at the proper time a comprehensive banking system may be established, such as will provide for the indispensable needs of commerce by authorizing a sufficient supply of paper currency."

After consideration by the Commission, on motion, it was

Resolved, That a copy of the foregoing indorsement by the secretary of finance and justice be transmitted to the Spanish-Filipino Bank, and that the said institution be requested to appoint a committee to confer with the secretary of finance and justice, and with such other members of the Commission, if any, as may be designated to act with him in regard to modifications of the charter of the bank, so that a scheme may be devised that shall be just to the government, to the bank, and to the public at large.

No reply to this communication has been received from the bank and no further recommendation is now made upon this subject.

It should, however, be remarked that by section 111 of Act No. 1189, entitled "An act to provide revenue for the support of the insular, provincial, and municipal governments by internal taxation," a tax of 1 per cent per month was imposed upon all circulating notes issued

those loans to a known government with which it was dealing, not with a third party who was a stranger to the whole contract. Suppose the insurrectionary Filipino government had succeeded in establishing itself. The principles of the international law which the bank invokes would have preserved its charter rights under the new government, but it would be a somewhat strained construction of law that would, under the charter, require the bank to make the loans referred to to the insurrectionary Filipino government when that government might have been totally insolvent. It never contracted to make such advances to the American Government, to the Filipino government, or to any other government except the Spanish Government. But those provisions for loans are the considerations in part which the bank, as one contracting party, made to the Spanish Government, the other contracting party, for its privilege of existence, for its alleged monopoly in the issuance of paper money, and for the special protection which the government threw around it through the Protector and Syndic. Through every portion of the charter runs the current of an intimate contract made with the Crown of Spain, whereby duties and rights appertain to each, which are mutually interdependent. It is a serious question as to whether, under these circumstances, the duties and obligations which the Spanish Crown had assumed could be divested from it and transferred to the American Government. The law officers of the United States have uniformly refused to recognize the obligation of the United States or of the insular government to pay to the Manila Railway Company (Limited) a bonus in the form of a guaranty of earnings which the Government of Spain had made to that railroad company in its charter, upon the ground that the contract was with the Government of Spain, and that neither by principles of international law nor by the treaty of Paris did the United States assume any of the obligations incurred by the Crown of Spain.

"A full discussion of this subject may be found in Magoon's Reports, page 177. So far as the Spanish Government was bound by the terms of the franchise in question, its obligations to the bank apparently remained unimpaired by the treaty of cession, the United States having paid to Spain \$20,000,000, largely in view of the assumption of any debts or obligations of the Spanish Government in relation to the ceded territory. This appears from the protocols of the treaty. Probably a correct view of the law on this subject is stated in Hall on International Law, pages 101 and 102, in discussing the correspondence between the United States and England with reference to the authority exercised by England over the Mosquito Shore, and to a treaty between Great Britain and Mexico, wherein the distinguished author says:

"Mr. Buchanan's general statement was accurate, but the very fact that Mexico succeeded to all the territorial rights of Spain, and consequently to full sovereignty within the territory of the republic, shows that it could not be burdened by limitations on sovereignty to which Spain had chosen to consent. It possessed all the rights appertaining to an independent state, disencumbered from personal contracts entered into by the state from which it had severed itself."

"Upon the principle here stated, the obligations which the Spanish Government had assumed to the Spanish-Filipino Bank were personal obligations which remained binding upon the two contracting parties, and which the Government of the United States never assumed by the treaty of cession. After consideration by the Commission, on motion, it was

Resolved, That a copy of the foregoing indorsement by the secretary of finance and justice be transmitted to the Spanish-Philippine Bank, and that the said institution be requested to appoint a committee to confer with the secretary of finance and justice, and with such other members of the Commission, if any, as may be designated to act with him in regard to modifications of the charter of the bank, so that a scheme may be devised that shall be just to the government, to the bank, and to the public at large.

No reply to this communication has been received from the bank and no further recommendation is now made upon this subject.

It should, however, be remarked that by section 111 of Act No. 1189, entitled "An act to provide revenue for the support of the insular, provincial, and municipal governments by internal taxation," a tax of 1 per cent per month was imposed upon all circulating notes issued

by any bank in the Philippine Islands in excess of the amount of its paid-up capital, it being deemed dangerous to the public that paper circulating as money should be issued by a bank to a greater extent than the full amount of its paid-up capital, no security by way of government bonds or otherwise being provided by the terms of the charter of the Spanish-Philippine Bank for circulating notes issued.

THE CUSTOMS SERVICE AND THE TARIFF.

Mr. Morgan W. Shuster, the efficient collector of customs for the Philippine Islands, still holds that position. During his absence in the United States on leave for about seven months or more the duties of his office were performed to the satisfaction of the general public and of the government by the deputy collector, Mr. H. B. McCoy.

NEW LEGISLATION AFFECTING THE CUSTOMS SERVICE.

New legislation affecting the duties of the collector of customs and the administration of the bureau of customs during the past year has not been of great importance.

Act No. 1025, passed December 16, 1903, authorized the recognition of licenses issued by the Spanish Government to masters, mates, patrons, and engineers of seagoing vessels in the Philippine coastwise trade.

Act No. 1026, enacted December 16, 1903, reduced the annual tonnage tax upon cascoes and other vessels not decked over and not propelled by their own steam, sail, or similar motive power from 2 pesos to 1 peso Philippine currency per gross ton.

Act No. 1066, passed February 26, 1904, exempted steam vessels of less than 100 tons burden and sailing vessels of less than 150 tons from certain requirements as to the carrying of licensed officers.

Act No. 1149, passed May 10, 1904, authorized the civil governor to declare all wharves, landing places, or streets or lands which are necessary for customs purposes in any port of entry to be under the jurisdiction of the collector of customs of the port, subject to the ordinary general police powers of the municipality interested.

On May 19, 1904, by Act No. 1160, authority was given for the clearing of foreign vessels for the port of Isabela de Basilan, under proper restrictions.

The act of Congress approved April 15, 1904, entitled "An act to regulate the shipping and trade between the ports of the United States and ports or places in the Philippine Archipelago, between ports or places in the Philippine Archipelago, and for other purposes," prohibits, after July 1, 1906, the transportation of merchandise (except supplies for the Army or Navy) and passengers between ports of the United States and ports or places in the Philippine Archipelago, direct or by the way of a foreign port, in any other vessel than a vessel of the United States, but provides that the act shall not apply to transportation of merchandise or passengers between the ports or places in the Philippine Archipelago, the government of the Philippine Islands being authorized to adopt and enforce from time to time regulations governing the transportation of merchandise and passengers between ports or places in the Philippine Archipelago until Congress shall have authorized the registry as vessels of the

United States of vessels owned in the Philippine Archipelago. The same act further provides for the levying of tonnage taxes upon foreign vessels coming into the United States from the Philippine Archipelago as though coming from foreign countries. The Secretary of Commerce and Labor is authorized to issue regulations for the enforcement of the act, provided that such of the navigation laws of the United States as are in force in the Philippine Archipelago in regard to vessels coming into the Philippine Islands from the mainland territory and other insular possessions of the United States should continue to be administered by the proper officials of the government of the Philippine Islands. This act is undoubtedly of very great importance to the interests of the islands. Those provisions that authorize the regulation of the interisland commerce by the government of the Philippine Islands are sufficiently elastic to enable the local authorities to meet the conditions as they from time to time arise, and must be considered as entirely favorable to local interests. Those provisions of the act which prohibit the carrying of passengers or freight from the United States to the Philippines, or the reverse, after July 1, 1906, in any except American bottoms will probably increase materially the cost of passenger and freight transportation to and from the islands and the United States after July 1, 1906. These provisions doubtless will operate for the benefit of the shipping of the United States, but it is feared that the increased prosperity to the American shipping companies will be at the expense of the Philippine Islands by increasing the cost of all commodities imported from the United States and increasing the charge made upon exports of the Philippine Islands to the United States, so that competition in the United States by products exported from the islands will be more difficult by reason of the enhanced cost of transportation.

NEW FACILITIES.

The facilities for transacting business in connection with the customs service at the port of Manila have been materially improved during the year and of course will be greatly improved when the harbor works now under process of construction are completed. Large appropriations have also been made for the harbors of Iloilo and Cebu, which improvements, when completed, will greatly facilitate the customs service at those important points. The complaints that were formerly made as to the expense and delay experienced in the landing of cargoes at the port of Manila have almost entirely ceased. The system of landing by the running check has been continued with most satisfactory results.

In the last report from this office it was stated that appropriation had been made for the purchase of the "arrastre" plant for the purpose of receiving imported goods at the customs wharves, from the lorchas, cascoes, or lighters in which the same had been brought from the steamers to the customs wharves, and transporting the same by tramways or other facilities to the proper customs warehouses. This operation had been performed before that time by a private firm. The result of the purchase and operation by the government has been most satisfactory, owing doubtless in part to the efficient management thereof by Mr. Clifford D. Ham, deputy surveyor of customs, who has had charge of the operation of the plant.

The public has been given a service much superior to any they have ever before had, while the charges for the service have been materially reduced and have resulted in a saving of at least 108,600 pesos per year to the importers. This saving will be materially larger during the coming year, inasmuch as on July 1, 1904, the then existing rate of 1 peso and 50 centavos per ton for warehouse deliveries on all merchandise was reduced to 1 peso and 25 centavos, a decrease of 16 per cent. Nevertheless the charges have been sufficient to pay all the operating expenses and to reimburse the insular treasurer for the entire cost of the plant. The reimbursement, it will be noticed, has been made in less than one year from the date of the purchase. The result has been in every way satisfactory to the government financially and to the exporting and importing public.

EMPLOYEES.

It is worthy of note that a large percentage of the employees in the customs service at Manila have been Filipinos, whose services have been on the whole very satisfactory. The collector of customs states that in the combined collection and disbursement of nearly 50,000,000 pesos by customs officers during the past three years not 1 cent has been lost through absconding or defaulting officers; that there have been but two cases of misappropriation of public funds, one of a minor character, and in each instance the offender was promptly detected, prosecuted, and sentenced, and restitution secured of the misappropriated funds.

During the year there have been employed 219 Americans and 218 Filipinos belonging to the classified civil service, and 173 Filipinos belonging to the unclassified service, the total employees for the port of Manila during the year being 219 Americans and 391 Filipinos.

COST OF COLLECTION.

The cost of collecting customs dues has been kept within what are believed to be reasonable limits, considering the difficulties of the situation, although further economies are considered to be practicable. The cost of collecting \$1 during the fiscal year 1904 has been \$0.0426, as against a cost of \$0.0381 for the same amount during the fiscal year 1903, the increased cost coming mainly from the necessity of maintaining substantially the same force and receiving materially smaller customs duties, as hereinafter stated. The cost of collecting \$1 in the port of San Francisco, on the same basis as is adopted for computation in this port, is 6 cents; in Baltimore, \$0.052; in Hawaii, \$0.089, and in Porto Rico, \$0.067.

RECEIPTS AND EXPENDITURES.

The total expenditure for the bureau of customs for the fiscal year 1904 was \$563,463.79, including the purchase of the "arrastre" plant, permanent repairs, rental and supplies, and salaries and wages. The expenditure for the fiscal year 1905 will be less, the falling off of the revenues requiring a reduction of expenditures.

The total net receipts from the bureau of customs for the fiscal year 1903 were \$9,013,778.82, and for the fiscal year 1904, \$7,924,096.30,

showing a reduction of \$1,089,682.52 net customs receipts, after deducting duties paid by the government on imports for its own use and all refundable duties. One cause of this great reduction in the receipts, so far as exports are concerned, is the small copra crop, the especially dry season last year having seriously affected the production. So far as imports are concerned the diminution of the purchasing power of the people, resulting from war, pestilence, and death of animals, has had an important effect, the reserve funds in the hands of the people having been largely consumed in purchasing necessities of life during prior years of hardship. The difficulties incident to a change of currency also have been no small factor in retarding business.

The diminution in customs receipts did not commence to show greatly until about the 1st of October, 1903, and appears in a more marked degree from a comparison of the total net receipts for the twelve months beginning with the 1st of October, 1903, with the total net receipts for the corresponding twelve months beginning with the 1st of October, 1902, the total net receipts during the earlier period being \$9,019,829.72, and the total net receipts during the later one being \$7,620,632.63, showing a diminution during the twelve months beginning with October 1, 1903, of \$1,399,197.09 as compared with the like period of the preceding year, or a reduction of 15½ per cent.

Included in the statement of customs receipts for the fiscal year 1904 are \$107,338.13, money of the United States, received on importations by the Government, by virtue of Act No. 875, entitled "An act providing for the collection of duties on goods, wares, and merchandise imported into the islands for use of the insular, provincial, or municipal governments," which sum is in no sense income.

REFUNDABLE DUTIES.

The effect of that portion of the act of Congress approved March 8, 1902, entitled "An act temporarily to provide revenue for the Philippine Islands, and for other purposes," which provides for the refund of all export duties imposed in the Philippine Islands upon articles exported therefrom into and consumed in the United States, still continues to be most disadvantageous to the islands. Since its enactment down to the close of the fiscal year 1904, \$1,060,460.20, money of the United States, has been collected in the islands as export duties, which are refundable because the dutiable goods were imported into and consumed in the United States.

The effect of this provision of law is to enable manufacturers of articles made from hemp in the United States to compete on more favorable terms than like manufacturers in other parts of the world, the export duties collected not being refunded to exporters whose merchandise is consumed in other parts of the world. Certain industries in the United States are thereby stimulated at the expense of the Philippine treasury. It is not believed that such was the intention of Congress in the enactment aforesaid, but such is undoubtedly the result. Nor is this great loss counterbalanced by the provision of the same act of Congress that customs duties collected in the United States on imports from the Philippine Islands should be returned to the insular treasury. The amount so returned or to be returned, down to the close of the fiscal year 1904 is only \$721,884.80,

leaving a balance against the insular treasury of \$338,575.40 by reason of the legislation aforesaid.

It ought also in this connection to be remarked that this discrimination in favor of the United States on export duties has been regarded by foreign nations as a violation of the "open door" policy in the Orient, and as such has been called to the attention of the State Department at Washington by the representatives of several of the large commercial powers.

RICE IMPORTATIONS.

The importation of rice still continues to reach great dimensions. The amount and value of rice imported into the islands during the fiscal years 1899 to 1904, inclusive, are as follows:

Rice imported into the Philippine Islands by fiscal years—Value and duty represented in United States currency—Government free entries not included.

[Values are invoice values in country from whence imported.]

Year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1899.....	128,383,130	\$1,938,932	\$374,607
1900.....	244,673,707	3,186,138	622,542
1901.....	422,642,506	5,490,958	1,128,694
1902.....	477,051,362	6,578,481	1,174,058
1903.....	663,185,639	10,061,323	1,535,563
1904.....	727,124,332	11,548,814	1,650,720
Total.....	2,653,000,616	38,804,706	6,526,214

It thus appears that since and including the year 1899, \$38,804,706, money of the United States, has been sent out of the islands for the purchase of rice, and that during the fiscal year 1904 a larger sum than ever before was sent out for that purpose. This latter fact, in a sense, tends to show that the people have had money to purchase rice, but, on the other hand, it shows a tremendous drain upon the resources of the islands for the purchase of a commodity which ought to be produced here in a sufficient amount to supply all the demands of the inhabitants, as was true in former years. If there should be as large an importation during the present year as during the last, it would be a very marked indication that the people were able not only to consume the immense quantity of rice that will be raised this year, but likewise to purchase largely from abroad.

This drainage of the resources of the country, however, is undesirable, and it is believed will not be permanent. It will be observed that while the importation of rice for the fiscal year 1904 took out of the islands \$11,548,814, the exportation of hemp during the same year brought into the islands \$21,794,760, money of the United States, or \$10,245,946 more than enough to pay for all the rice imported. The balance of trade was in favor of the islands for the fiscal year 1903, but against them for the fiscal year 1904, the imports for the latter year amounting to \$33,221,250 in value and the exports to \$30,226,127, leaving a net adverse balance of trade amounting to \$2,995,123, imports and exports of currency not being included. The drain upon the islands caused by this excess of imports over exports,

however, is not as serious as it might appear at first blush, because very large importations of merchandise are sold by merchants to the officers and men of the United States Army and Navy in the Philippine Islands, and are paid for by funds remitted from the United States, and therefore payment for such imports does not come from the body of the Philippine people. In these statements of exports and imports nothing is included for supplies and material imported for or exported by the Army or Navy of the United States. Such importations and exportations do not enter into these statistics. With the great renewal of agriculture now apparent, the prospective large crops of rice and hemp, and the higher present price for sugar, it is believed that for the fiscal year 1905 the balance of trade will again be in favor of the islands.

In the value of imports the United States rises for the fiscal year 1904 from fourth to second place, the French East Indies, as indicated, taking the first place on account of the extensive importations of rice therefrom. England held the second place in 1902 and 1903, and third place in 1904. The United States still continues to take the lead in the value of exports received from the islands.

It is believed that the amount of rice imported during the fiscal year 1905 will show a great diminution, in view of the fact that the resumption of rice culture all over the islands is making very great strides. Rinderpest, which killed many of the animals necessary for cultivation, has been stayed in its course, and the importation of animals by the government and the processes of nature are rapidly making it possible for the agriculturists to resume their former occupations. The prospects for the crop of rice for the current year are remarkably good.

The details of all imports and exports by countries and months will be found in the annual report of the collector of customs for the Philippine Islands, more particularly in the Appendix A attached to his report, which is hereto annexed and marked "Exhibit 7."

DINGLEY TARIFF.

The customs duties imposed in the United States upon exports of the Philippine Islands are still 75 per cent of the Dingley tariff, which, in the case of sugar and tobacco products, is practically prohibitive. It is unnecessary to repeat the arguments which have been so often used to show the injustice of this treatment of the islands, and it is hoped and believed that the coming session of Congress will furnish material relief in this respect; anything, however, less than a reduction to 25 per cent of the Dingley tariff would furnish little relief to our people.

CHINESE REGISTRATION.

The registration of Chinese, in pursuance of section 4 of the act of Congress approved April 29, 1904, and act 702 of the Philippine Commission, was intrusted to the collector of customs for the Philippine Archipelago, and was carried through under his supervision. The total number of certificates issued was 49,659, approximately 60 per cent of which were issued in the Manila registration district.

These figures do not represent the number of Chinese in the islands, but only such as deemed themselves to be within the provisions of the law requiring registration. The expenses of registration were \$33,828.62 and the receipts from fees \$25,220, making a net cost of \$8,608.62.

INTERNAL REVENUE PRIOR TO THE ENACTMENT OF THE NEW LAW.

The duties of the acting collector of internal revenue prior to the 1st day of August, 1904, have been of minor importance. Aside from his special duties as city assessor and collector for the city of Manila, his jurisdiction was limited to unorganized provinces, and soon after the closing of the last fiscal year that portion of the island of Mindanao which had not been organized and the Jolo Archipelago were organized under the Moro provincial government act, and the administration of that territory for the purposes of internal revenue passed under the control of the government of that province. The details of the work of the acting collector of internal revenues are found in his special report, which is hereto annexed and marked "Exhibit 8," covering the period from September, 1903, to August 1, 1904.

THE NEW INTERNAL-REVENUE LAW.

It was stated in the last report from this office to the Commission that a new internal-revenue law had been prepared by Commissioner Ide and was in readiness for submission to the Commission, but that the Commission had not then had time to consider it. The new draft was printed and distributed among the business men of the islands and came up for public discussion early in April, 1904. Great objection to the law as drafted was manifested in the public discussions and in many of the newspapers published in Manila. Protests against its enactment were received from many parts of the islands.

The Commission discontinued public discussions in the middle of April and adjourned to Baguio and notified all parties in interest that they might file written arguments with the Commission until the 10th of May. Great numbers of written arguments were received, prepared by chambers of commerce, business men, merchants, and corporations, and by able counsel employed by them. These arguments continued to be received until the 1st of June and were all carefully read and considered in the daily sessions that were held for that purpose. The proposed law was then taken up section by section. The machinery providing for the collection of the tax was simplified and the rate of taxation proposed was reduced in nearly every case. The original draft had been upon the basis of presenting for the consideration of the Commission all persons, objects, and occupations that were subject to internal-revenue taxation in other countries, so that those that were least desirable might be eliminated, but leaving available for the Commission a complete working scheme for such as should be deemed suited for existing conditions. An income tax was not thought desirable, nor was a succession tax at this time considered useful. The tax on corporations, which is a most useful system of raising revenues in many States of the United States, was

not deemed suitable for a new country where capital is greatly needed for internal development and where new capital would be substantially all in the form of money paid into corporations. It was thought to be more desirable to encourage the introduction of capital than to raise such revenues as might be secured from a tax upon a corporation, purely as a corporation, for its franchise and right of existence. Corporation property is taxed in the same manner as property of individuals. The principal sources of revenue decided upon were certain license taxes, a tax on distilled spirits, fermented liquors, manufactured tobacco and snuff, cigars and cigarettes, matches, banks and bankers, stamp taxes on specified objects, a poll or cedula personal tax, tax on insurance companies, forestry products, valid perfected mining concessions granted prior to April 11, 1899, and on certain kinds of business, manufacture, and occupation. It was estimated that when the law was in full operation it would produce from 5,000,000 to 6,000,000 pesos annually, or somewhat less than was secured under the Spanish régime from the poll or cedula personal tax alone. The cedula tax, under the former régime, was exceedingly burdensome, particularly upon poor people, 5 pesos being the minimum. Under the internal-revenue law, as adopted, the tax was made 1 peso per year, the same rate that was in force before the passage of the new law, and applies only to male inhabitants over 18 and under 60 years of age. Members of the non-Christian tribes (unless otherwise provided by law), soldiers and sailors of the United States Army and Navy, civilian employees of the military branch of the United States Government in the Philippine Islands, consular and diplomatic representatives and officials of foreign powers in the Philippine Islands, paupers, insane persons, imbeciles, and persons serving a sentence of more than one year in a public prison are exempt from this tax.

The proposed tax on forestry products did not change the rate that had been previously established by the Commission.

The tax on perfected mining concessions granted prior to April 11, 1899, was not expected to realize any substantial revenue, but afforded a means of eliminating concessions that were not utilized but stood largely in the way of the location and development of new claims.

The draft as perfected by the Commission at Baguio was immediately printed and generally distributed, and public sessions were held until the 2d day of July, when the law was finally enacted. The public discussions indicated that the objections to the law had been largely removed by modifications that had been made, resulting from the prior public discussions and from the written arguments which had been submitted. The arguments presented at the public discussion were all practically of the same character, and were devoted to the details of the law and to further consideration of the rates of taxes proposed.

Further concessions in the interest of those affected by the proposed taxation were made as a result of the public discussions. The law as finally enacted, though distasteful to those affected by it, was, on the whole, as satisfactory, probably, as any reasonable scheme of internal revenue taxation that could have been devised would be. The act was numbered 1189, and was entitled "An act to provide revenue for the support of the insular, provincial, and municipal governments by

internal taxation." It provided for a bureau of internal revenue, appertaining to the department of finance and justice, under the superintendence of a collector of internal revenue, whose duty it was to prepare and distribute all necessary regulations, directions, and instructions, and to provide for needed forms, instruments, and implements for the purposes of the act, and to distribute adhesive stamps for use as stamp taxes.

Provision was made for the employment of such inspectors, revenue agents, internal revenue storekeepers, and internal revenue gaugers as might be required. Every provincial treasurer and his authorized deputies were authorized to act within their own provinces as collectors of internal revenue, subject to the general supervision of the collector of internal revenue for the Philippine Islands, and adequate penalties were provided for violations of law or for neglect of duty on the part of the internal revenue officials.

All taxes to be paid upon the manufacture or sale of distilled spirits, rectified or manufactured liquor, imitations of wine, fermented liquors, manufactured tobacco and snuff, cigars, cigarettes, and matches, and upon the execution of bonds, debentures, certificates of stock and indebtedness, or other documents, instruments, or papers, certificates, receipts, contracts, insurance bonds, tickets, and other written instruments of every kind which are subject to tax, and upon all acts, pursuits, and trades subject to taxation, aside from poll taxes, are required to be paid by the affixture of internal revenue stamps.

A wide departure, however, from the method employed in the United States in the use of internal-revenue stamps in connection with articles subject to taxation was made. The affixing of stamps to each package of cigarettes, each box of cigars, each box of matches, and each bottle or other receptacle of liquors was considered to be unduly burdensome and subject to serious objection on the ground of the liability to reuse of stamps by washing, whereby the revenue would be subject to great frauds and loss. Instead of that a system was adopted that had been found to be more useful in practice in Porto Rico, under its recently adopted internal-revenue law, whereby the taxes were to be paid upon the removal of any quantity of a manufactured article from its manufactory by affixing a stamp of the required denomination to the invoice of all goods removed at any one time, one part of which stamp should remain upon the stub of an invoice book and the other part upon the invoice of the merchandise removed, so that every stamp was, in fact, canceled or destroyed when the invoice was removed from its stub and the goods taken from the manufactory for the purpose of sale. This system has been found in Porto Rico and some other countries to be entirely feasible. It results in far less fraud than any other, and much greater convenience to the government and the public.

Goods removed from manufactories for the purpose of export are not subject to the tax, and provisions were made for the proper identification of such goods.

Provisions for the payment of license taxes are analogous to those in use in the United States.

The collector of internal revenue was authorized to enforce such regulations as might be prescribed by the secretary of finance and justice, to refund taxes erroneously received or penalties imposed

without authority, or taxes that appear to be unjustly assessed, or collections that are excessive in amount.

Authority was given for the compromise of civil and other cases arising under the provisions of the act, and for the imposition of fines administratively, but with the right of appeal to the courts.

The license taxes were made payable on the 1st of January of each year, or on the commencing of any trade or business on which a tax was imposed. Authority was given for payment quarterly instead of annually, if desired. License taxes imposed are as follows:

	Pesos.
On each retail liquor dealer.....	48
On each retail vino dealer.....	8
On each wholesale liquor dealer.....	200
On each retail dealer in fermented liquors.....	40
On each dealer in manufactured tobacco.....	8
On each manufacturer of tobacco.....	20
On each manufacturer of cigars or cigarettes.....	20

On each peddler of manufactured tobacco or distilled, manufactured, or fermented liquors, from 16 to 80 pesos, according to the character of the business.

It will be observed that these license taxes are very low, mainly much lower than similar taxes in the United States.

The tax on distilled spirits was based upon each liter of proof spirits and amounted to 20 centavos per liter, with an additional tax of 10 centavos if the spirits were used in the manufacture of artificial liquors by the addition of other ingredients, but on distilled spirits containing amyl or other higher alcohols (fusel oil), aldehyde, or methyl alcohol (wood alcohol) in the proportion of 4 or more parts in 1,000, which may be removed from the distillery purely for manufacturing or industrial purposes, and not intended as beverages, the tax was made 10 centavos per liter of proof spirits unless the same were rectified so as to be fit for human consumption, in which case the tax was made 20 centavos per proof liter.

The tax upon beer, ale, porter, and other fermented liquors was made 4 centavos per liter.

The tax upon snuff manufactured of tobacco was made 32 centavos per kilogram.

On all chewing and smoking tobacco, fine-cut Cavendish, plug or twist, cut or granulated, of every description, the tax was 48 centavos per kilogram.

On cigars, 2 pesos on each 1,000 where the manufacturer's wholesale price was 20 pesos per 1,000 or less; 4 pesos when the price was 50 pesos per 1,000 or more than 20 pesos; 6 pesos where the manufacturer's price exceeds 50 pesos. On cigarettes weighing not more than 2 kilograms per 1,000, 67 centavos per 1,000; on cigarettes weighing more than 2 kilos per 1,000, 2 pesos per 1,000.

On matches, 40 centavos on each gross of boxes containing not more than 120 sticks to the box; on each gross of boxes containing over 120 sticks to the box, a proportional additional tax. The same tax was imposed upon matches imported from other countries for sale and consumption in the Philippine Islands. Imported matches are likewise subject to a customs duty, but matches can be manufactured in Japan and brought to the Philippine Islands at a materially less cost than they can be manufactured here. It was considered that the

customs duties and the imposition of an internal-revenue tax upon the imported article would leave the domestic product and the imported article substantially upon the same plane as at present, and that neither could drive the other out of the market and the public could get the benefit of the competition and the government secure adequate revenue.

There was imposed on banks and bankers one-eighteenth of 1 per cent each month on the average amount of deposits when the deposit was subject to payment by check or draft, and one twenty-fourth of 1 per cent upon capital employed in the islands by banks or bankers; but savings banks, provident institutions having no capital stock and which do no other business than to receive deposits to be invested for the sole benefit of the parties making such deposits, are exempt from taxation. A tax of one-twelfth of 1 per cent a month was imposed upon the average amount of circulation issued by any bank, association, corporation, company, or person engaged in the business of banking, including as circulation all notes and other obligations used as money, and an additional tax of 1 per cent per month upon the average amount of such circulation issued beyond the amount of paid-in capital of such bank or corporation. The heavy tax imposed upon bank notes issued as money in excess of paid-up capital would undoubtedly be very burdensome to any bank that should attempt to issue paper exceeding in amount its paid-up capital. In fact, such taxes might be prohibitive to the issuance of such money, unless rates of interest should be abnormally and unusually high, but it was considered that a special privilege of that kind ought not to be enjoyed without the payment of a liberal tax, and that it was very undesirable that any bank should be issuing bank notes as money in excess of its paid-up capital.

The Spanish-Filipino is the only bank at present affected by the taxation last referred to. It claims the right under its charter to issue bank notes to three times the amount of its paid-up capital, as stated earlier in this report.

Small stamp taxes are required on specified objects, such as bonds, debentures, stock certificates, transfers of shares, checks, drafts, bills of exchange, insurance policies, receipts for sums exceeding 30 pesos, warehouse receipts, bills of lading, tickets, licenses, mortgages, deeds, charter parties, etc.

A tax of 1 per cent was imposed on the total premiums received by insurance companies on business done in the islands, and one-third of 1 per cent quarterly upon sales by manufacturers and others, except such as are made by agriculturists of their own products, by exporters, manufacturers, and venders of alcoholic and fermented liquors, tobacco products, matches, or stores belonging to the insular government or the Government of the United States, and by small dealers generally.

Moderate annual license taxes are likewise required for pawn-brokers, real-estate brokers, customs brokers, stockbrokers, theaters, cockpits, circuses, billiard rooms, lawyers, photographers, veterinarians, race tracks, etc.

The law abolishes practically all the multifarious and minute exactions required under the Spanish régime and all internal-revenue taxation imposed by the military government of the United States in

the Philippine Islands or by the insular government. Thus hundreds of petty taxes are completely done away with and the whole process of collection greatly simplified. Substantially 75 per cent of all stamp license taxes imposed on distilled and fermented liquors, tobacco, snuff, cigars, cigarettes, matches, banks, bankers, insurance companies, forestry products, on valid and perfected mining concessions, business, manufactures, and occupations accrues to the insular treasury for general governmental purposes, 10 per cent to the provincial governments, and 15 per cent to the municipal governments; but of the 15 per cent set apart for the municipal governments, one-third must be utilized solely for the maintenance of free public primary schools. The taxes on theaters, museums, circuses, concert halls, pawnbrokers, cockpits, and billiard rooms accrue wholly to the municipality wherein the same are assessed and collected.

The proceeds of the poll or cedula personal tax accrue one-half to the province and the other half to the municipality wherein the same is collected.

It is believed that these provisions will materially strengthen the financial position of the provinces and municipalities and make it more feasible to maintain free public primary schools in all the municipalities and render more certain the payment of teachers and the cost of building schoolhouses and other expenses appertaining to the maintenance of public schools.

None of the tax provisions are operative before the 1st of January, 1905, except those on insurance companies, banks, manufacturers of matches, cigars, cigarettes, tobacco, snuff, fermented liquors, distilled and rectified spirits. The revenue from the taxes now in force will almost entirely accrue from the manufacture of tobacco, cigars, cigarettes, fermented and distilled liquors, and matches, all of which are articles of optional use and of such character that the consumer contributes as much or as little as he chooses toward the revenue, according to his desire for the articles consumed by him. If those articles are sold in the market at the prices which have heretofore prevailed, plus the amount of the internal-revenue tax, the consumer can still get three or four times as much for his money as can the consumer of like articles in the United States or Europe.

The tax on native liquor, in the form of anisado, ginebra, and vino, as ordinarily consumed in the islands, is less than 1 centavo or one-half cent a glass. On the great mass of cigars consumed in the islands the tax is at the rate of one-half cent for 5 cigars, and on cigarettes at the rate of one-half cent on each 15 cigarettes. The number of machine-made cigarettes manufactured and sold in the city of Manila during the month of August, the first month of the operation of the law, was 106,233,420. After the old stock of liquors and cigars, which were produced in excessive amounts during the two months before the law went into effect, is consumed it is believed that business in all those important industries will resume its normal course. It is apparent from the budget hereinafter stated that it would have been impossible for the insular government to have maintained itself during the coming year without the additional revenue accruing from this new and important legislation. It is hoped that the results will ultimately be so satisfactory as to enable

the government to reduce the rates of customs duties or to abolish the land tax in whole or in part.

In the preparation of the original draft of the internal-revenue law, and also in the perfection of the law as finally enacted, the services of Mr. John S. Hord have been of great value. Upon the taking effect of the law Mr. Hord was appointed collector of internal revenue and is now acting in that capacity. He has had extensive experience in the enactment and enforcement of the new internal-revenue system now in force in the island of Porto Rico as collector of internal revenue for that island, and was of much service in the institution of the new system there.

The results of the internal-revenue law in the city of Manila for the month of September, 1904, are now available and show that during that month there was collected in the city of Manila the sum of ₱183,124.12, an increase of over ₱77,000 over the month of August, or nearly 75 per cent. The output of tax-paid articles from the Manila manufactories during the two months is shown in the following table:

Output of tax-paid articles from Manila manufactories in 1904.

Articles.	August.	September.	Increase.
Distilled spirits, proof liters.....	41,248	61,838	17,590
Fermented liquors, gauge liters.....	196,885	214,824	17,939
Manufactured tobacco, kilograms.....	4,985	13,495	8,500
Cigars.....	1,941,754	3,195,305	1,150,551
Cigarettes.....	108,709,032	199,480,581	90,771,549
Matches, gross of boxes:			
Domestic.....	8,750	18,000	9,250
Imported.....	1,116	9,150	- 8,034

The report of the collector of internal revenue is hereto attached and marked "Exhibit 9."

THE TREASURY AND THE AUDITOR'S OFFICE.

No change has been made during the year in the administration of these two bureaus, in both of which efficiency has prevailed. During a considerable portion of the year the auditor, Mr. A. L. Lawshe, has been absent on a well-earned leave and the duties of the office have been performed by the deputy auditor, Mr. William W. Barre.

The formal report of the acting auditor has not yet been completed for the fiscal year 1904. When completed it will be forwarded as an annex to this report and marked "Exhibit 10."

The enormous difficulties that have confronted the auditor heretofore, owing to the fluctuating currency and the necessity of keeping accounts in often varying ratios, have been largely terminated by the general introduction of the new currency system.

The several amounts in the treasury at the end of the fiscal years 1901, 1902, 1903, and 1904 were as follows, stated in money of the United States, local currency being reduced to United States currency at the ratio existing on each of the dates:

June 30, 1901.....	\$6,222,912.78
June 30, 1902.....	5,995,006.49½
June 30, 1903.....	10,633,693.13
June 30, 1904.....	16,495,561.59

The several sums available for appropriation at the close of the fiscal years referred to are as follows, local currency being reduced on the basis above stated:

June 30, 1901-----	\$3, 919, 420. 00
June 30, 1902-----	3, 999, 426. 47
June 30, 1903-----	6, 849, 321. 28
June 30, 1904-----	10, 547, 606. 28

But of the sums stated as available for appropriation on the 30th day of June, 1904, \$10,817,906.04 appertained to the Congressional relief fund, the gold-standard fund, and the friar-land fund, so that of general funds nothing was available on the 30th day of June, 1904, and there was an actual deficit of \$270,299.76. The real sums available for appropriation from general funds may be stated in round numbers as follows:

At the end of the fiscal year 1901-----	\$3, 900, 000. 00
At the end of the fiscal year 1902-----	4, 000, 000. 00
At the end of the fiscal year 1903-----	2, 173, 000. 00
At the end of the fiscal year 1904, a deficit of-----	270, 299. 76

The surplus of substantially \$4,000,000 that existed June 30, 1902, has, in the two succeeding years, been all exhausted and a deficit of \$270,000 substituted therefor. This condition of the treasury is most unsatisfactory. It resulted from excessive appropriations during the two last preceding years and from a diminution in the customs receipts. It is believed that it ought to be the policy of the government to maintain a reasonable surplus to meet special emergencies. It is expected that at the next session of Congress authority will be given to the insular government to issue bonds to a limited amount for the purpose of paying for permanent improvements. Such legislation is indispensable for the security of the insular treasury. It is an almost unheard of thing for a young government to engage in extensive permanent improvements that will last for generations and attempt to pay for them entirely out of current revenues. Such a course cripples the whole government in its general administration and ought not longer to be continued.

If the large permanent improvements like that of the port of Manila and the construction of the Benguet road and the improvement of the harbors of Iloilo and Cebu and other important works had been paid for from a bond issue the deficit above stated would not have existed and the insular government would not be obliged to look forward to the coming fiscal year with anxiety. The insular treasury should be reimbursed out of the proceeds of the bonds referred to for some of the money expended during the last two years for these large and permanent improvements, so that the extreme economy that has become necessary in the educational and other bureaus may no longer be required, and the government may more completely and satisfactorily perform the high duties which it has assumed of fitting the Filipinos for self-government.

The total receipts and disbursements of the insular government during the fiscal year ending June 30, 1904, excluding refundable collections and disbursements, all receipts and disbursements relating to the gold-standard fund, and those on account of the Congressional relief appropriation and the friar-land bonds, but including in dis-

bursments interest paid on friar-land bonds, stated in United States currency, were as follows:

RECEIPTS.

Customs revenues, including Moro Province	\$8,685,014.76
Postal receipts	133,513.74
Board of health	10,416.54
Bureau of public lands	17,157.82
Bureau of government laboratories	21,284.24
Bureau of agriculture	4,518.43½
Philippine civil hospital	16,930.27½
Civil sanitarium, Benguet	3,511.01
Mining bureau	11.41
Signal service	58,461.97½
Bureau of prisons	65,756.55
Bureau of justice	99.00
Insular cold-storage and ice plant	307,544.68
Bureau of insular treasurer	20,511.93½
Notarial and judicial fees	75,718.60
Bureau of patents, copyrights, and trade-marks	6,304.18
Bureau of public printing	59,343.47½
Official Gazette	10,290.21
Interest on deposits	95,175.11½
Spanish seized funds covered into treasury	142,795.70
Unassigned service and miscellaneous items	9,195.48½
Cable concessions	30,419.94½

Total insular revenues 9,774,066.08

The item of Spanish seized funds is an extraordinary revenue, and should be deducted from the sum above stated to show the real revenue of the government, as follows:

Total insular revenues	\$9,774,066.08
Less Spanish seized funds	142,795.70

Total net revenues 9,631,270.38

In addition to the revenue above stated, refundable customs, internal revenue, and forestry dues were collected amounting to \$798,401.79.

The entire revenues for the city of Manila amounted to \$1,954,620.09, which, added to the above balance of insular revenues, makes the total net revenue of the insular government and the city of Manila \$11,585,890.47.

DISBURSEMENTS.

The total disbursements for the insular service for the fiscal year 1904, including items disbursed in that year on account of prior fiscal years, were as follows:

The executive	\$653,803.60
Department of the interior	1,042,594.31
Department of commerce and police	3,985,549.79
Department of finance and justice	1,592,345.25½
Department of public instruction	2,016,660.45½
Unassigned service	3,064,511.60½

Grand total 12,385,465.10½

The total disbursements for the city of Manila during the fiscal year 1904 on account of that year and prior years were \$2,685,595.41½,

making a grand total of \$15,071,060.52 disbursements for the insular government and the city of Manila for the fiscal year 1904.

Included in the insular disbursements were the following items that are in the character of permanent improvements and are in no sense a part of current expenses:

Construction of the leper colony at Cullion.....	\$10,705.84
For permanent improvements for the bureau of coast guard and transportation, including purchase of boats.....	702,421.57
For the bureau of architecture, public works.....	279,518.06
Benguet road.....	702,132.19
Improvement of the port of Manila.....	1,314,452.58
Calbayog pier.....	13,929.79
For the purchase of land in Malate.....	22,435.43
Purchase of Oriente Hotel.....	306,818.18
Total.....	3,352,413.64

There were also the following extraordinary disbursements made, which will not reappear in subsequent statements:

For the census bureau.....	\$59,663.71
For the St. Louis Exposition.....	525,783.04
Expenses of honorary commission to the United States.....	30,238.75
Expenses of the opium committee.....	10,400.79
Total.....	626,086.29

The final result, therefore, is as follows:

Total revenues of the insular government, including the city of Manila.....	\$11,585,890.47
Total disbursements for the insular government, including the city of Manila.....	15,071,060.52

There was an excess of expenditures over revenues during the fiscal year 1904 amounting to \$3,485,170.05.

During the year, however, there were repayments to the treasury amounting to \$2,274,023.66 from overappropriations during that or prior fiscal years, which sum should be deducted from the excess of expenditures over revenues above stated, leaving a total excess of expenditures over revenues during the fiscal year 1904 of \$2,432,510.87.

In this statement no repayments or reimbursable items are included which are not in the nature of revenue proper—that is, none are included which accrue only from reimbursable or revolving payments, like those of the insular purchasing agent.

CONGRESSIONAL RELIEF FUND.

The details of the expenditure of this fund do not appertain to this office.

At the close of the fiscal year 1904 the amount to the credit of the Congressional relief fund in the treasury amounted to \$1,232,895.99.

THE FRIAR LAND FUNDS.

The bonds, dated February 1, 1904, for the purchase of the friar lands, under the provisions of the act of Congress approved July 1, 1902, were sold on February 1, 1904, to the amount of \$7,000,000, and realized a premium of \$530,390, being sold at 107.577. The bonds

internal taxation." It provided for a bureau of internal revenue, appertaining to the department of finance and justice, under the superintendence of a collector of internal revenue, whose duty it was to prepare and distribute all necessary regulations, directions, and instructions, and to provide for needed forms, instruments, and implements for the purposes of the act, and to distribute adhesive stamps for use as stamp taxes.

Provision was made for the employment of such inspectors, revenue agents, internal revenue storekeepers, and internal revenue gaugers as might be required. Every provincial treasurer and his authorized deputies were authorized to act within their own provinces as collectors of internal revenue, subject to the general supervision of the collector of internal revenue for the Philippine Islands, and adequate penalties were provided for violations of law or for neglect of duty on the part of the internal revenue officials.

All taxes to be paid upon the manufacture or sale of distilled spirits, rectified or manufactured liquor, imitations of wine, fermented liquors, manufactured tobacco and snuff, cigars, cigarettes, and matches, and upon the execution of bonds, debentures, certificates of stock and indebtedness, or other documents, instruments, or papers, certificates, receipts, contracts, insurance bonds, tickets, and other written instruments of every kind which are subject to tax, and upon all acts, pursuits, and trades subject to taxation, aside from poll taxes, are required to be paid by the affixture of internal revenue stamps.

A wide departure, however, from the method employed in the United States in the use of internal-revenue stamps in connection with articles subject to taxation was made. The affixing of stamps to each package of cigarettes, each box of cigars, each box of matches, and each bottle or other receptacle of liquors was considered to be unduly burdensome and subject to serious objection on the ground of the liability to reuse of stamps by washing, whereby the revenue would be subject to great frauds and loss. Instead of that a system was adopted that had been found to be more useful in practice in Porto Rico, under its recently adopted internal-revenue law, whereby the taxes were to be paid upon the removal of any quantity of a manufactured article from its manufactory by affixing a stamp of the required denomination to the invoice of all goods removed at any one

without authority, or taxes that appear to be unjustly assessed, or collections that are excessive in amount.

Authority was given for the compromise of civil and other cases arising under the provisions of the act, and for the imposition of fines administratively, but with the right of appeal to the courts.

The license taxes were made payable on the 1st of January of each year, or on the commencing of any trade or business on which a tax was imposed. Authority was given for payment quarterly instead of annually, if desired. License taxes imposed are as follows:

	Pesos.
On each retail liquor dealer.....	48
On each retail vino dealer.....	8
On each wholesale liquor dealer.....	200
On each retail dealer in fermented liquors.....	40
On each dealer in manufactured tobacco.....	8
On each manufacturer of tobacco.....	20
On each manufacturer of cigars or cigarettes.....	20

On each peddler of manufactured tobacco or distilled, manufactured, or fermented liquors, from 16 to 80 pesos, according to the character of the business.

It will be observed that these license taxes are very low, mainly much lower than similar taxes in the United States.

The tax on distilled spirits was based upon each liter of proof spirits and amounted to 20 centavos per liter, with an additional tax of 10 centavos if the spirits were used in the manufacture of artificial liquors by the addition of other ingredients, but on distilled spirits containing amyl or other higher alcohols (fusel oil), aldehyde, or methyl alcohol (wood alcohol) in the proportion of 4 or more parts in 1,000, which may be removed from the distillery purely for manufacturing or industrial purposes, and not intended as beverages, the tax was made 10 centavos per liter of proof spirits unless the same were rectified so as to be fit for human consumption, in which case the tax was made 20 centavos per proof liter.

The tax upon beer, ale, porter, and other fermented liquors was made 4 centavos per liter.

The tax upon snuff manufactured of tobacco was made 32 centavos per kilogram.

On all chewing and smoking tobacco, fine-cut Cavendish, plug or twist, cut or granulated, of every description, the tax was 48 centavos per kilogram.

On cigars, 2 pesos on each 1,000 where the manufacturer's wholesale price was 20 pesos per 1,000 or less; 4 pesos when the price was 50 pesos per 1,000 or more than 20 pesos; 6 pesos where the manufacturer's price exceeds 50 pesos. On cigarettes weighing not more than 2 kilograms per 1,000, 67 centavos per 1,000; on cigarettes weighing more than 2 kilos per 1,000, 2 pesos per 1,000.

On matches, 40 centavos on each gross of boxes containing not more than 120 sticks to the box; on each gross of boxes containing over 120 sticks to the box, a proportional additional tax. The same tax was imposed upon matches imported from other countries for sale and consumption in the Philippine Islands. Imported matches are likewise subject to a customs duty, but matches can be manufactured in Japan and brought to the Philippine Islands at a materially less cost than they can be manufactured here. It was considered that the

These figures do not represent the number of Chinese in the islands, but only such as deemed themselves to be within the provisions of the law requiring registration. The expenses of registration were \$33,828.62 and the receipts from fees \$25,220, making a net cost of \$8,608.62.

INTERNAL REVENUE PRIOR TO THE ENACTMENT OF THE NEW LAW.

The duties of the acting collector of internal revenue prior to the 1st day of August, 1904, have been of minor importance. Aside from his special duties as city assessor and collector for the city of Manila, his jurisdiction was limited to unorganized provinces, and soon after the closing of the last fiscal year that portion of the island of Mindanao which had not been organized and the Jolo Archipelago were organized under the Moro provincial government act, and the administration of that territory for the purposes of internal revenue passed under the control of the government of that province. The details of the work of the acting collector of internal revenues are found in his special report, which is hereto annexed and marked "Exhibit 8," covering the period from September, 1903, to August 1, 1904.

THE NEW INTERNAL-REVENUE LAW.

It was stated in the last report from this office to the Commission that a new internal-revenue law had been prepared by Commissioner Ide and was in readiness for submission to the Commission, but that the Commission had not then had time to consider it. The new draft was printed and distributed among the business men of the islands and came up for public discussion early in April, 1904. Great objection to the law as drafted was manifested in the public discussions and in many of the newspapers published in Manila. Protests against its enactment were received from many parts of the islands.

The Commission discontinued public discussions in the middle of April and adjourned to Baguio and notified all parties in interest that they might file written arguments with the Commission until the 10th of May. Great numbers of written arguments were received, prepared by chambers of commerce, business men, merchants, and corporations, and by able counsel employed by them. These arguments continued to be received until the 1st of June and were all carefully read and considered in the daily session: that were held for that purpose. The proposed law was then taken up section by section. The machinery providing for the collection of the tax was simplified and the rate of taxation proposed was reduced in nearly every case. The original draft had been upon the basis of presenting for the consideration of the Commission all persons, objects, and occupations that were subject to internal-revenue taxation in other countries, so that those that were least desirable might be eliminated, but leaving available for the Commission a complete working scheme for such as should be deemed suited for existing conditions. An income tax was not thought desirable, nor was a succession tax at this time considered useful. The tax on corporations, which is a most useful system of raising revenues in many States of the United States, was

not deemed suitable for a new country where capital is greatly needed for internal development and where new capital would be substantially all in the form of money paid into corporations. It was thought to be more desirable to encourage the introduction of capital than to raise such revenues as might be secured from a tax upon a corporation, purely as a corporation, for its franchise and right of existence. Corporation property is taxed in the same manner as property of individuals. The principal sources of revenue decided upon were certain license taxes, a tax on distilled spirits, fermented liquors, manufactured tobacco and snuff, cigars and cigarettes, matches, banks and bankers, stamp taxes on specified objects, a poll or cedula personal tax, tax on insurance companies, forestry products, valid perfected mining concessions granted prior to April 11, 1899, and on certain kinds of business, manufacture, and occupation. It was estimated that when the law was in full operation it would produce from 5,000,000 to 6,000,000 pesos annually, or somewhat less than was secured under the Spanish régime from the poll or cedula personal tax alone. The cedula tax, under the former régime, was exceedingly burdensome, particularly upon poor people, 5 pesos being the minimum. Under the internal-revenue law, as adopted, the tax was made 1 peso per year, the same rate that was in force before the passage of the new law, and applies only to male inhabitants over 18 and under 60 years of age. Members of the non-Christian tribes (unless otherwise provided by law), soldiers and sailors of the United States Army and Navy, civilian employees of the military branch of the United States Government in the Philippine Islands, consular and diplomatic representatives and officials of foreign powers in the Philippine Islands, paupers, insane persons, imbeciles, and persons serving a sentence of more than one year in a public prison are exempt from this tax.

The proposed tax on forestry products did not change the rate that had been previously established by the Commission.

The tax on perfected mining concessions granted prior to April 11, 1899, was not expected to realize any substantial revenue, but afforded a means of eliminating concessions that were not utilized but stood largely in the way of the location and development of new claims.

The draft as perfected by the Commission at Baguio was immediately printed and generally distributed, and public sessions were held until the 2d day of July, when the law was finally enacted. The public discussions indicated that the objections to the law had been largely removed by modifications that had been made, resulting from the prior public discussions and from the written arguments which had been submitted. The arguments presented at the public discussion were all practically of the same character, and were devoted to the details of the law and to further consideration of the rates of taxes proposed.

Further concessions in the interest of those affected by the proposed taxation were made as a result of the public discussions. The law as finally enacted, though distasteful to those affected by it, was, on the whole, as satisfactory, probably, as any reasonable scheme of internal revenue taxation that could have been devised would be. The act was numbered 1189, and was entitled "An act to provide revenue for the support of the insular, provincial, and municipal governments by

internal taxation." It provided for a bureau of internal revenue, appertaining to the department of finance and justice, under the superintendence of a collector of internal revenue, whose duty it was to prepare and distribute all necessary regulations, directions, and instructions, and to provide for needed forms, instruments, and implements for the purposes of the act, and to distribute adhesive stamps for use as stamp taxes.

Provision was made for the employment of such inspectors, revenue agents, internal revenue storekeepers, and internal revenue gaugers as might be required. Every provincial treasurer and his authorized deputies were authorized to act within their own provinces as collectors of internal revenue, subject to the general supervision of the collector of internal revenue for the Philippine Islands, and adequate penalties were provided for violations of law or for neglect of duty on the part of the internal revenue officials.

All taxes to be paid upon the manufacture or sale of distilled spirits, rectified or manufactured liquor, imitations of wine, fermented liquors, manufactured tobacco and snuff, cigars, cigarettes, and matches, and upon the execution of bonds, debentures, certificates of stock and indebtedness, or other documents, instruments, or papers, certificates, receipts, contracts, insurance bonds, tickets, and other written instruments of every kind which are subject to tax, and upon all acts, pursuits, and trades subject to taxation, aside from poll taxes, are required to be paid by the affixture of internal revenue stamps.

A wide departure, however, from the method employed in the United States in the use of internal-revenue stamps in connection with articles subject to taxation was made. The affixing of stamps to each package of cigarettes, each box of cigars, each box of matches, and each bottle or other receptacle of liquors was considered to be unduly burdensome and subject to serious objection on the ground of the liability to reuse of stamps by washing, whereby the revenue would be subject to great frauds and loss. Instead of that a system was adopted that had been found to be more useful in practice in Porto Rico, under its recently adopted internal-revenue law, whereby the taxes were to be paid upon the removal of any quantity of a manufactured article from its manufactory by affixing a stamp of the required denomination to the invoice of all goods removed at any one time, one part of which stamp should remain upon the stub of an invoice book and the other part upon the invoice of the merchandise removed, so that every stamp was, in fact, canceled or destroyed when the invoice was removed from its stub and the goods taken from the manufactory for the purpose of sale. This system has been found in Porto Rico and some other countries to be entirely feasible. It results in far less fraud than any other, and much greater convenience to the government and the public.

Goods removed from manufactories for the purpose of export are not subject to the tax, and provisions were made for the proper identification of such goods.

Provisions for the payment of license taxes are analogous to those in use in the United States.

The collector of internal revenue was authorized to enforce such regulations as might be prescribed by the secretary of finance and justice, to refund taxes erroneously received or penalties imposed

without authority, or taxes that appear to be unjustly assessed, or collections that are excessive in amount.

Authority was given for the compromise of civil and other cases arising under the provisions of the act, and for the imposition of fines administratively, but with the right of appeal to the courts.

The license taxes were made payable on the 1st of January of each year, or on the commencing of any trade or business on which a tax was imposed. Authority was given for payment quarterly instead of annually, if desired. License taxes imposed are as follows:

	Pesos.
On each retail liquor dealer.....	48
On each retail vino dealer.....	8
On each wholesale liquor dealer.....	200
On each retail dealer in fermented liquors.....	40
On each dealer in manufactured tobacco.....	8
On each manufacturer of tobacco.....	20
On each manufacturer of cigars or cigarettes.....	20

On each peddler of manufactured tobacco or distilled, manufactured, or fermented liquors, from 16 to 80 pesos, according to the character of the business.

It will be observed that these license taxes are very low, mainly much lower than similar taxes in the United States.

The tax on distilled spirits was based upon each liter of proof spirits and amounted to 20 centavos per liter, with an additional tax of 10 centavos if the spirits were used in the manufacture of artificial liquors by the addition of other ingredients, but on distilled spirits containing amyl or other higher alcohols (fusel oil), aldehyde, or methyl alcohol (wood alcohol) in the proportion of 4 or more parts in 1,000, which may be removed from the distillery purely for manufacturing or industrial purposes, and not intended as beverages, the tax was made 10 centavos per liter of proof spirits unless the same were rectified so as to be fit for human consumption, in which case the tax was made 20 centavos per proof liter.

The tax upon beer, ale, porter, and other fermented liquors was made 4 centavos per liter.

The tax upon snuff manufactured of tobacco was made 32 centavos per kilogram.

On all chewing and smoking tobacco, fine-cut Cavendish, plug or twist, cut or granulated, of every description, the tax was 48 centavos per kilogram.

On cigars, 2 pesos on each 1,000 where the manufacturer's wholesale price was 20 pesos per 1,000 or less; 4 pesos when the price was 50 pesos per 1,000 or more than 20 pesos; 6 pesos where the manufacturer's price exceeds 50 pesos. On cigarettes weighing not more than 2 kilograms per 1,000, 67 centavos per 1,000; on cigarettes weighing more than 2 kilos per 1,000, 2 pesos per 1,000.

On matches, 40 centavos on each gross of boxes containing not more than 120 sticks to the box; on each gross of boxes containing over 120 sticks to the box, a proportional additional tax. The same tax was imposed upon matches imported from other countries for sale and consumption in the Philippine Islands. Imported matches are likewise subject to a customs duty, but matches can be manufactured in Japan and brought to the Philippine Islands at a materially less cost than they can be manufactured here. It was considered that the

customs duties and the imposition of an internal-revenue tax upon the imported article would leave the domestic product and the imported article substantially upon the same plane as at present, and that neither could drive the other out of the market and the public could get the benefit of the competition and the government secure adequate revenue.

There was imposed on banks and bankers one-eighteenth of 1 per cent each month on the average amount of deposits when the deposit was subject to payment by check or draft, and one twenty-fourth of 1 per cent upon capital employed in the islands by banks or bankers; but savings banks, provident institutions having no capital stock and which do no other business than to receive deposits to be invested for the sole benefit of the parties making such deposits, are exempt from taxation. A tax of one-twelfth of 1 per cent a month was imposed upon the average amount of circulation issued by any bank, association, corporation, company, or person engaged in the business of banking, including as circulation all notes and other obligations used as money, and an additional tax of 1 per cent per month upon the average amount of such circulation issued beyond the amount of paid-in capital of such bank or corporation. The heavy tax imposed upon bank notes issued as money in excess of paid-up capital would undoubtedly be very burdensome to any bank that should attempt to issue paper exceeding in amount its paid-up capital. In fact, such taxes might be prohibitive to the issuance of such money, unless rates of interest should be abnormally and unusually high, but it was considered that a special privilege of that kind ought not to be enjoyed without the payment of a liberal tax, and that it was very undesirable that any bank should be issuing bank notes as money in excess of its paid-up capital.

The Spanish-Filipino is the only bank at present affected by the taxation last referred to. It claims the right under its charter to issue bank notes to three times the amount of its paid-up capital, as stated earlier in this report.

Small stamp taxes are required on specified objects, such as bonds, debentures, stock certificates, transfers of shares, checks, drafts, bills of exchange, insurance policies, receipts for sums exceeding 30 pesos, warehouse receipts, bills of lading, tickets, licenses, mortgages, deeds, charter parties, etc.

A tax of 1 per cent was imposed on the total premiums received by insurance companies on business done in the islands, and one-third of 1 per cent quarterly upon sales by manufacturers and others, except such as are made by agriculturists of their own products, by exporters, manufacturers, and venders of alcoholic and fermented liquors, tobacco products, matches, or stores belonging to the insular government or the Government of the United States, and by small dealers generally.

Moderate annual license taxes are likewise required for pawn-brokers, real-estate brokers, customs brokers, stockbrokers, theaters, cockpits, circuses, billiard rooms, lawyers, photographers, veterinarians, race tracks, etc.

The law abolishes practically all the multifarious and minute exactions required under the Spanish régime and all internal-revenue taxation imposed by the military government of the United States in

the Philippine Islands or by the insular government. Thus hundreds of petty taxes are completely done away with and the whole process of collection greatly simplified. Substantially 75 per cent of all stamp license taxes imposed on distilled and fermented liquors, tobacco, snuff, cigars, cigarettes, matches, banks, bankers, insurance companies, forestry products, on valid and perfected mining concessions, business, manufactures, and occupations accrues to the insular treasury for general governmental purposes, 10 per cent to the provincial governments, and 15 per cent to the municipal governments; but of the 15 per cent set apart for the municipal governments, one-third must be utilized solely for the maintenance of free public primary schools. The taxes on theaters, museums, circuses, concert halls, pawnbrokers, cockpits, and billiard rooms accrue wholly to the municipality wherein the same are assessed and collected.

The proceeds of the poll or cedula personal tax accrue one-half to the province and the other half to the municipality wherein the same is collected.

It is believed that these provisions will materially strengthen the financial position of the provinces and municipalities and make it more feasible to maintain free public primary schools in all the municipalities and render more certain the payment of teachers and the cost of building schoolhouses and other expenses appertaining to the maintenance of public schools.

None of the tax provisions are operative before the 1st of January, 1905, except those on insurance companies, banks, manufacturers of matches, cigars, cigarettes, tobacco, snuff, fermented liquors, distilled and rectified spirits. The revenue from the taxes now in force will almost entirely accrue from the manufacture of tobacco, cigars, cigarettes, fermented and distilled liquors, and matches, all of which are articles of optional use and of such character that the consumer contributes as much or as little as he chooses toward the revenue, according to his desire for the articles consumed by him. If those articles are sold in the market at the prices which have heretofore prevailed, plus the amount of the internal-revenue tax, the consumer can still get three or four times as much for his money as can the consumer of like articles in the United States or Europe.

The tax on native liquor, in the form of anisado, ginebra, and vino, as ordinarily consumed in the islands, is less than 1 centavo or one-half cent a glass. On the great mass of cigars consumed in the islands the tax is at the rate of one-half cent for 5 cigars, and on cigarettes at the rate of one-half cent on each 15 cigarettes. The number of machine-made cigarettes manufactured and sold in the city of Manila during the month of August, the first month of the operation of the law, was 106,233,420. After the old stock of liquors and cigars, which were produced in excessive amounts during the two months before the law went into effect, is consumed it is believed that business in all those important industries will resume its normal course. It is apparent from the budget hereinafter stated that it would have been impossible for the insular government to have maintained itself during the coming year without the additional revenue accruing from this new and important legislation. It is hoped that the results will ultimately be so satisfactory as to enable

the government to reduce the rates of customs duties or to abolish the land tax in whole or in part.

In the preparation of the original draft of the internal-revenue law, and also in the perfection of the law as finally enacted, the services of Mr. John S. Hord have been of great value. Upon the taking effect of the law Mr. Hord was appointed collector of internal revenue and is now acting in that capacity. He has had extensive experience in the enactment and enforcement of the new internal-revenue system now in force in the island of Porto Rico as collector of internal revenue for that island, and was of much service in the institution of the new system there.

The results of the internal-revenue law in the city of Manila for the month of September, 1904, are now available and show that during that month there was collected in the city of Manila the sum of ₱183,124.12, an increase of over ₱77,000 over the month of August, or nearly 75 per cent. The output of tax-paid articles from the Manila manufactories during the two months is shown in the following table:

Output of tax-paid articles from Manila manufactories in 1904.

Articles.	August.	September.	Increase.
Distilled spirits, proof liters	44,248	61,838	17,590
Fermented liquors, gauge liters	196,885	214,824	17,939
Manufactured tobacco, kilograms	4,985	13,495	8,510
Cigars	1,944,754	3,195,305	1,150,551
Cigarettes	108,709,032	199,489,581	90,771,549
Matches, gross of boxes:			
Domestic	8,750	18,000	9,250
Imported	1,116	9,150	8,034

The report of the collector of internal revenue is hereto attached and marked "Exhibit 9."

THE TREASURY AND THE AUDITOR'S OFFICE.

No change has been made during the year in the administration of these two bureaus, in both of which efficiency has prevailed. During a considerable portion of the year the auditor, Mr. A. L. Lawshe, has been absent on a well-earned leave and the duties of the office have been performed by the deputy auditor, Mr. William W. Barre.

The formal report of the acting auditor has not yet been completed for the fiscal year 1904. When completed it will be forwarded as an annex to this report and marked "Exhibit 10."

The enormous difficulties that have confronted the auditor heretofore, owing to the fluctuating currency and the necessity of keeping accounts in often varying ratios, have been largely terminated by the general introduction of the new currency system.

The several amounts in the treasury at the end of the fiscal years 1901, 1902, 1903, and 1904 were as follows, stated in money of the United States, local currency being reduced to United States currency at the ratio existing on each of the dates:

June 30, 1901.....	\$6,222,912.78
June 30, 1902.....	5,995,006.49½
June 30, 1903.....	10,633,693.13
June 30, 1904.....	16,495,561.69

The several sums available for appropriation at the close of the fiscal years referred to are as follows, local currency being reduced on the basis above stated:

June 30, 1901-----	\$3, 919, 420. 00
June 30, 1902-----	3, 999, 426. 47
June 30, 1903-----	6, 849, 321. 28
June 30, 1904-----	10, 547, 606. 28

But of the sums stated as available for appropriation on the 30th day of June, 1904, \$10,817,906.04 appertained to the Congressional relief fund, the gold-standard fund, and the friar-land fund, so that of general funds nothing was available on the 30th day of June, 1904, and there was an actual deficit of \$270,299.76. The real sums available for appropriation from general funds may be stated in round numbers as follows:

At the end of the fiscal year 1901-----	\$3, 900, 000. 00
At the end of the fiscal year 1902-----	4, 000, 000. 00
At the end of the fiscal year 1903-----	2, 173, 000. 00
At the end of the fiscal year 1904, a deficit of-----	270, 299. 76

The surplus of substantially \$4,000,000 that existed June 30, 1902, has, in the two succeeding years, been all exhausted and a deficit of \$270,000 substituted therefor. This condition of the treasury is most unsatisfactory. It resulted from excessive appropriations during the two last preceding years and from a diminution in the customs receipts. It is believed that it ought to be the policy of the government to maintain a reasonable surplus to meet special emergencies. It is expected that at the next session of Congress authority will be given to the insular government to issue bonds to a limited amount for the purpose of paying for permanent improvements. Such legislation is indispensable for the security of the insular treasury. It is an almost unheard of thing for a young government to engage in extensive permanent improvements that will last for generations and attempt to pay for them entirely out of current revenues. Such a course cripples the whole government in its general administration and ought not longer to be continued.

If the large permanent improvements like that of the port of Manila and the construction of the Benguet road and the improvement of the harbors of Iloilo and Cebu and other important works had been paid for from a bond issue the deficit above stated would not have existed and the insular government would not be obliged to look forward to the coming fiscal year with anxiety. The insular treasury should be reimbursed out of the proceeds of the bonds referred to for some of the money expended during the last two years for these large and permanent improvements, so that the extreme economy that has become necessary in the educational and other bureaus may no longer be required, and the government may more completely and satisfactorily perform the high duties which it has assumed of fitting the Filipinos for self-government.

The total receipts and disbursements of the insular government during the fiscal year ending June 30, 1904, excluding refundable collections and disbursements, all receipts and disbursements relating to the gold-standard fund, and those on account of the Congressional relief appropriation and the friar-land bonds, but including in dis-

bursements interest paid on friar-land bonds, stated in United States currency, were as follows:

RECEIPTS.

Customs revenues, including Moro Province	\$8, 685, 014. 76
Postal receipts	133, 513. 74
Board of health	10, 416. 54
Bureau of public lands	17, 157. 82
Bureau of government laboratories	21, 284. 24
Bureau of agriculture	4, 518. 43½
Philippine civil hospital	16, 930. 27½
Civil sanitarium, Benguet	3, 511. 01
Mining bureau	11. 41
Signal service	58, 461. 97½
Bureau of prisons	65, 786. 55
Bureau of justice	93. 00
Insular cold-storage and ice plant	307, 544. 68
Bureau of insular treasurer	20, 511. 93½
Notarial and judicial fees	75, 718. 60
Bureau of patents, copyrights, and trade-marks	6, 364. 18
Bureau of public printing	59, 343. 47½
Official Gazette	10, 290. 21
Interest on deposits	95, 175. 11½
Spanish seized funds covered into treasury	142, 795. 70
Unassigned service and miscellaneous items	9, 195. 48½
Cable concessions	30, 416. 94½

Total insular revenues	9, 774, 066. 08
------------------------------	-----------------

The item of Spanish seized funds is an extraordinary revenue, and should be deducted from the sum above stated to show the real revenue of the government, as follows:

Total insular revenues	\$9, 774, 066. 08
Less Spanish seized funds	142, 795. 70

Total net revenues	9, 631, 270. 38
--------------------------	-----------------

In addition to the revenue above stated, refundable customs, internal revenue, and forestry dues were collected amounting to \$798,401.79.

The entire revenues for the city of Manila amounted to \$1,954,620.09, which, added to the above balance of insular revenues, makes the total net revenue of the insular government and the city of Manila \$11,585,890.47.

DISBURSEMENTS.

The total disbursements for the insular service for the fiscal year 1904, including items disbursed in that year on account of prior fiscal years, were as follows:

The executive	\$683, 803. 60
Department of the interior	1, 042, 594. 31
Department of commerce and police	3, 985, 549. 70
Department of finance and justice	1, 592, 345. 25½
Department of public instruction	2, 016, 660. 45½
Unassigned service	3, 064, 511. 69½

Grand total	12, 385, 465. 10½
-------------------	-------------------

The total disbursements for the city of Manila during the fiscal year 1904 on account of that year and prior years were \$2,685,595.41½,

making a grand total of \$15,071,060.52 disbursements for the insular government and the city of Manila for the fiscal year 1904.

Included in the insular disbursements were the following items that are in the character of permanent improvements and are in no sense a part of current expenses:

Construction of the leper colony at Culion.....	\$10,705.84
For permanent improvements for the bureau of coast guard and transportation, including purchase of boats.....	702,421.57
For the bureau of architecture, public works.....	279,518.06
Benguet road.....	702,132.19
Improvement of the port of Manila.....	1,314,452.58
Calbayog pier.....	13,929.79
For the purchase of land in Malate.....	22,435.43
Purchase of Oriente Hotel.....	306,818.18
Total.....	3,352,413.64

There were also the following extraordinary disbursements made, which will not reappear in subsequent statements:

For the census bureau.....	\$59,663.71
For the St. Louis Exposition.....	525,783.04
Expenses of honorary commission to the United States.....	30,238.75
Expenses of the opium committee.....	10,400.79
Total.....	626,086.29

The final result, therefore, is as follows:

Total revenues of the insular government, including the city of Manila.....	\$11,585,890.47
Total disbursements for the insular government, including the city of Manila.....	15,071,060.52

There was an excess of expenditures over revenues during the fiscal year 1904 amounting to \$3,485,170.05.

During the year, however, there were repayments to the treasury amounting to \$2,274,023.66 from overappropriations during that or prior fiscal years, which sum should be deducted from the excess of expenditures over revenues above stated, leaving a total excess of expenditures over revenues during the fiscal year 1904 of \$2,432,510.87.

In this statement no repayments or reimbursable items are included which are not in the nature of revenue proper—that is, none are included which accrue only from reimbursable or revolving payments, like those of the insular purchasing agent.

CONGRESSIONAL RELIEF FUND.

The details of the expenditure of this fund do not appertain to this office.

At the close of the fiscal year 1904 the amount to the credit of the Congressional relief fund in the treasury amounted to \$1,232,895.99.

THE FRIAR LAND FUNDS.

The bonds, dated February 1, 1904, for the purchase of the friar lands, under the provisions of the act of Congress approved July 1, 1902, were sold on February 1, 1904, to the amount of \$7,000,000, and realized a premium of \$530,390, being sold at 107.577. The bonds

bear 4 per cent interest and are payable in thirty years from February 1, 1904, with the option on the part of the government to redeem them in ten years.

At the close of the fiscal year 1904 no payments had been made from these funds and the money remained on deposit with the official depositories of the insular treasury, the amount to the credit of the treasury on that date being \$7,530,390.

THE INSULAR BUDGET.

It was stated in the last previous report from this office that it had become practicable to pass regular appropriation bills only twice a year, instead of four times, as formerly. The bureaus having been substantially all organized, it was deemed feasible to pass an annual appropriation bill, and such course has been adopted for the fiscal year 1905. The insular appropriation bills for the fiscal year 1905 have been enacted, both for the regular service and for permanent improvements. The same course has also been taken with reference to the city of Manila. Eight million two hundred and sixty-two thousand four hundred and seventy dollars and eighty cents have been appropriated for the regular service of the insular government for the fiscal year 1905. By other acts, passed since the 30th day of June, 1904, either for permanent improvements, deficiencies, or for special uses, the following sums have been appropriated down to the 20th of October, 1904:

By Act No. 1194: For general purposes, to be disbursed by disbursing agent of the insular government at Washington, D. C.	\$25,000. 00
By Act No. 1201: For continuing Philippine exhibit at the Louisiana Purchase Exposition.....	150,000. 00
By Act No. 1203: For second quarterly interest upon friar land bonds.....	70,000. 00
By Act No. 1227: For general purposes, to be disbursed by disbursing agent of the insular government at Washington, D. C.	25,000. 00
By Act No. 1247: For the payment of the third quarterly interest upon friar land bonds.....	70,000. 00
By Act No. 1246: Public works and permanent improvements....	1,252,747. 37½
By Act No. 1248: Deficiency appropriation bill, fiscal year 1904.	67,955. 77
Total	9,923,178. 94½

For the city of Manila for the fiscal year 1905 there has been appropriated out of the insular treasury:

By Act No. 1213: For sundry expenses of the city of Manila during the fiscal year 1904.....	\$6,368. 76½
By Act No. 1216: For general purposes of the city.....	2,025,000. 00
By Act No. 1222: For permanent improvements.....	265,000. 00
Total	2,296,368. 76½

This sum, added to the total appropriations for the insular government as above stated, makes a total of appropriations for the fiscal year of \$12,219,542.71 for the insular government and the city of Manila.

It is believed that further appropriations for the city of Manila will not be necessary to any appreciable extent during the fiscal year. Doubtless some deficiency appropriations may have to be made for the general insular service. Appropriations that have already been

made for the improvement of the port of Manila and for the construction of the Benguet road are expected to be sufficient to carry on those works until the 1st of January, 1905. It is probable that there must also be appropriated during the fiscal year \$100,000 additional for the completion of the work on the Benguet road, and \$754,000 for the fulfillment of the contract for the improvement of the port of Manila, and an appropriation for interest on friar land bonds, \$140,000.

The appropriations necessary for the fiscal year may therefore be summarized as follows:

Already appropriated: For the insular service for permanent improvements-----	\$9,923,173.64½
To be appropriated:	
For the Benguet road-----	100,000.00
For permanent improvement of the harbor of the port of Manila -----	754,000.00
For interest on friar land bonds-----	140,000.00
Total appropriations for the insular government for the fiscal year 1905-----	10,917,173.64½
Total appropriations for the city of Manila for the fiscal year 1905 -----	2,296,368.76½
Total appropriations for the insular government and for the city of Manila for the fiscal year 1905-----	13,213,542.71

Included in the general appropriations are disbursements for the provinces of Paragua, Zambales, Nueva Vizcaya, Benguet, and Lepanto-Bontoc, which are supported in a large part from insular revenues.

Included in the foregoing statement are the following sums that are deemed to be for permanent insular improvements:

Bureau of architecture and construction of public buildings:	
Bureau of coast guard and transportation, machine shop on Engineer Island-----	P 11,087.00
Bureau of government laboratories-----	57,929.08
Bureau of insular purchasing agent-----	3,500.00
Bureau of Philippines Constabulary-----	20,000.00
Bilibid prison-----	14,828.00
Civil sanitarium and cottages, Baguio, Benguet-----	51,680.00
Bureau of coast guard and transportation, light-house service -----	117,000.00
General improvements of Engineer Island-----	21,000.00
Construction and equipments of marine railway and machine shops on Engineer Island-----	185,000.00
Bureau of Philippines Constabulary, telegraph and telephone service -----	34,500.00
Bureau of prisons for installation of electric light and power -----	15,000.00
Benguet road -----	715,000.00
Improvement of the port of Manila-----	1,200,000.00
Timber wharf, harbor of Cebu-----	6,470.00
Purchase of land in Ermita-----	40,000.00
Total -----	2,492,994.08

In the appropriation for the city of Manila the sum of \$265,000 for permanent improvements is also included.

The receipts for the insular government during the fiscal year, of course, are, to a considerable degree, matters of estimate. The internal-revenue law is yet in its experimental stage.

The total deposit of revenues for the months of July, August, and September, 1904, amounted to \$2,161,611, not including deposits on account of collections in the city of Manila or from the new internal-revenue law. Assuming that the revenues for the year will be four times what they have been for the first quarter, the total insular revenues for the fiscal year would be \$8,646,444, excluding internal-revenue receipts. It is estimated that, after giving to the municipalities and provinces that portion of the income which by law accrues to them from the new internal-revenue law, the insular treasury will receive during the eleven months of the fiscal year that the law will be in operation—from August 1, 1904, to June 30, 1905—\$1,750,000.

The municipal board of the city of Manila estimates the revenues of the city for the year to be \$1,659,750. The revenues available for appropriation therefore may be thus estimated:

Insular revenues for the year, not including internal-revenue taxes	\$8, 646, 444. 00
Proceeds of internal-revenue taxes	1, 750, 000. 00
City of Manila	1, 659, 750. 00

Estimated total revenues for the year	12, 056, 194. 00
---------------------------------------	------------------

Grand summary, fiscal year 1905.

Total of estimated appropriations for the insular government and the city of Manila	\$13, 213, 542. 71
Total estimated revenues for the year, including the city of Manila	12, 056, 194. 00

An apparent deficit of	1, 157, 348. 71
------------------------	-----------------

It is difficult to determine the amount that should be deducted from this apparent deficit by reason of repayments. The repayments for the current fiscal year will be far less than in former years because the appropriations were more closely drawn and also because all available surplus under appropriations for the first half of the fiscal year 1904 was in each case deducted from the appropriations of the bureau for the second half, so that in substance the repayments for the first half of the fiscal year 1904 have already accrued to the insular treasury through the diminished appropriations made for the bureau in the last half. While the repayments stated in the auditor's report for the months of July, August, and September, 1904, are large, yet those repayments were mainly due to revolving or reimbursable appropriations, so that they do not inure as revenue to the government, but continue to perform their functions in the bureaus for which they were appropriated, such as that of the insular purchasing agent, without being treated either as income or disbursements. It is estimated that repayments that are properly to be treated as income and to be deducted from the deficit above stated will amount to \$450,000 for the year. This is the estimate made by the acting auditor. Deducting this sum from the apparent deficit above shown, there would remain an actual probable deficit for the fiscal year 1905 amounting to \$707,348.71. It is apparent from these figures that without the income to accrue from the internal-revenue law the government would have been in a bad financial condition. It is also apparent that the great drain upon the insular revenues caused by the large contracts for permanent improvements that have been entered upon can not continue. This drain never ought to have been made, but for

reasons unnecessary to be detailed here Congress has not yet taken the necessary steps to authorize the sale of bonds to secure money for permanent improvements.

It is strenuously urged that Congress be requested to authorize the issuance of bonds for permanent improvements of the insular government, not to exceed \$10,000,000 in amount, and that the insular government be authorized, out of the proceeds of such bonds, to reimburse itself for the sums heretofore appropriated for the improvements of the ports at Manila, Cebu, and Iloilo, and for the construction of the Benguet road.

The necessity for economy has induced great reductions in appropriations for the fiscal year 1905, as compared with those for the fiscal year 1904, involving very largely the elimination of permanent improvements that had not already been begun and were not under contract, and also material reductions in the ordinary expenses of bureaus. Such reductions have, in many cases, caused the dismissal of a considerable number of employees. It is not believed, however, that the efficiency of the service has been impaired by these reductions. The total appropriations for the insular government and for the city of Manila for the fiscal year 1904 for ordinary and extraordinary expenditures and for permanent improvements, not including any appropriations for the gold-standard fund or the Congressional relief fund, amounted to ₱30,098,616.26 and 748,771.19 pesos Mexican currency. Reducing the Mexican currency to Philippine currency at the arbitrary ratio of 1 peso Philippine currency for 1 peso and 10 centavos Mexican, that item would stand ₱680,701.26, making a total of ₱30,779,317.52, or \$15,389,658.76 in gold. The total appropriations made and to be made for the fiscal year 1905 for ordinary and extraordinary expenditures and for permanent improvements for the insular government and for the city of Manila, as above stated, are estimated at \$13,213,542.71, making a reduction in appropriations for the fiscal year 1905 of \$2,176,116.05, as compared with the fiscal year 1904.

In the foregoing budget no items are included pertaining to the gold-standard fund, because all the receipts and disbursements relating to that fund enter into separate accounts and are dealt with elsewhere. Nor does this budget undertake to deal with the Congressional relief fund, because no part of it enters into the general revenues.

Nor do the friar-land bonds enter into this budget, except so far as it includes appropriations for interest which has been or will be paid upon those bonds. The proceeds of the bonds themselves and all lands that shall be acquired by virtue thereof constitute a separate trust fund.

THE BUDGET OF THE CITY OF MANILA.

The revenues for the city of Manila for the fiscal year 1905 are estimated by the municipal board, as above stated, to amount to \$1,659,750. The appropriations for the city, as above stated, amount to \$2,296,368.76½, including permanent improvements; the balance of the appropriations above the estimated income of the city being provided for by the payment by the insular government of 30 per cent of the expenditures of the city, as heretofore.

The statement of the budget of the city of Manila will therefore be:

Revenues -----	\$1, 659, 750. 00
30 per cent of expenditure to be paid by Insular government.....	688, 910. 63
Aggregate income -----	2, 348, 660. 63
Total appropriation -----	2, 296, 368. 76½
An apparent surplus for the fiscal year of.....	52, 291. 86½

It will be observed that the estimated income for the city of Manila is less than for the fiscal year 1904. The diminution of receipts results largely from the fact that the internal-revenue collections from distillers, manufacturers of cigars and cigarettes, tobacco manufacturers, and brewers located in the city heretofore went for the benefit of the city. Hereafter the internal revenues will be apportioned throughout the various provinces, including the city of Manila, in proportion to the population; and this is only just, inasmuch as articles of this character produced in the city of Manila are consumed all over the islands and the consumers pay the revenues, and the revenues ought to be distributed generally, instead of all being concentrated for the benefit of the capital.

FINANCIAL CONDITION OF THE PROVINCES AND MUNICIPALITIES.

The following summary will show, in a general way, the financial condition of the provincial and municipal governments. Certain minor license taxes, however, are paid direct to the municipal treasuries and do not appear in this statement.

PROVINCIAL GOVERNMENTS.

The following shows the financial condition of each province for the current fiscal year:

Abra.—Balance, provincial fund, July 1, 1903, ₱724.16, 6,448.60 pfs. Revenues collected: Provincial, ₱8,563.82, 5,344.86 pfs.; municipal, ₱14,344.69, 12,232.80 pfs. Refund by warrant of internal revenue and forestry collections, ₱3,384.20. Cash balance, provincial fund, June 30, 1904, ₱8,640.56, 2,132.74 pfs.

Albay.—Balance, provincial fund, July 1, 1903, ₱6,308.92, 4,782.15 pfs. Revenues collected: Provincial, ₱54,982.59, 63,587.09 pfs.; municipal, ₱70,095.72, 112,899.18 pfs. Refunds by warrant of internal revenue and forestry collections, ₱4,000.16. Cash balance, provincial fund, June 30, 1904, ₱17,912.72, 1,383.67 pfs.

Ambos Camarines.—Balance, provincial fund, July 1, 1903, ₱3,714.68, 28,031.40 pfs. Revenues collected: Provincial, ₱39,474.98, 48,278.20 pfs.; municipal, ₱46,735.48, 58,740.22 pfs. Refund by warrant of internal revenue and forestry collections, ₱14,967.33. Cash balance, provincial fund, June 30, 1904, ₱2,461.46, 27,927.55 pfs.

Antique.—Balance, provincial fund, July 1, 1903, ₱278.30, 6,024.08 pfs. Revenues collected: Provincial, ₱11,453.87, 12,390.72 pfs.; municipal, ₱15,482.97, 22,075.23 pfs. Refunds by warrants of internal revenue and forestry collections, ₱513.39. Cash balance, provincial fund, June 30, 1904, ₱4,876.79, 1,932.18 pfs.

Batuan.—Balance, provincial fund, July 1, 1903, ₱317.18, 3,319.06 pfs. Revenues collected: Provincial, ₱16,639.86, 9,193.26 pfs.; municipal, ₱21,524.73, 15,616.65 pfs. Refunds by warrant of internal revenue and forestry collections, ₱13,835.02. Cash balance, provincial fund, June 30, 1904, ₱6,222.26, 178.28 pfs.

Batangas.—Balance, provincial fund, July 1, 1903, ₱8,366.94, 32,961.56 pfs. Revenues collected: Provincial, ₱59,263.21, 19,859.73 pfs.; municipal, ₱83,109.70, 39,998.92 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,689.46. Cash balance, provincial fund, June 30, 1904, ₱24,004.52, 3,800.04 pfs.

Benguet.—Balance, provincial fund, July 1, 1903, 5,305.88 pfs. Revenues

collected: Provincial, ₱500.66, 473.06 pfs. Refunds by warrant of internal revenue and forestry collections, none. Cash balance, provincial fund, June 30, 1904, ₱3,119.98, 129.85 pfs.

Bohol.—Balance, provincial fund, July 1, 1903, ₱14,344.04, 11,402.89 pfs. Revenues collected: Provincial, ₱17,852.20, 39,896.68 pfs.; municipal, ₱23,891.27, 59,948.70 pfs. Refund by warrant of internal revenue and forestry collections, ₱2,062.52. Cash balance, provincial fund, June 30, 1904, ₱17,656.21, 16,806.67 pfs.

Bulacan.—Balance, provincial fund, July 1, 1903, ₱3,452.88, 22,291.95 pfs. Revenues collected: Provincial, ₱92,249.96, 70,879.33 pfs.; municipal, ₱114,939.38, 100,954.38 pfs. Refund by warrant of internal revenue and forestry collections, ₱6,917.52. Cash balance, provincial fund, June 30, 1904, ₱73,564.55, 326.85 pfs.

Cagayan.—Balance, provincial fund, July 1, 1903, ₱20,271.34, 43,539.54 pfs. Revenues collected: Provincial, ₱19,649.92, 53,106.11 pfs.; municipal, ₱30,805.19, 104,898.45 pfs. Refunds by warrant of internal revenue and forestry collections, ₱10,070.63. Cash balance, provincial fund, June 30, 1904, ₱15,786.81, 29,700.88 pfs.

Capiz.—Balance, provincial fund, July 1, 1903, ₱171.66, 3,263.24 pfs. Revenues collected: Provincial, ₱25,173.86, 16,318.06 pfs.; municipal, ₱33,511.22, 23,337.11 pfs. Refund by warrant of internal revenue and forestry collections, ₱1,727.53. Cash balance, provincial fund, June 30, 1904, ₱6,564.78, 745.56 pfs.

Cavite.—Balance, provincial fund, July 1, 1903, ₱13,013.48, 37,589.66 pfs. Revenues collected: Provincial, ₱39,140.43, 21,821.20 pfs.; municipal, ₱69,330.95, 57,203.29 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,022.42. Cash balance, provincial fund, June 30, 1904, ₱22,005.70.

Cebu.—Balance, provincial fund, July 1, 1903, ₱14,313.20, 32,908.42 pfs. Revenues collected: Provincial, ₱72,445.08, 90,598.45 pfs.; municipal, ₱103,247.09, 170,228.76 pfs. Refunds by warrant of internal revenues and forestry collections, ₱1,521.50. Cash balance, provincial fund, June 30, 1904, ₱8,453.35, 61,102.86 pfs.

Ilocos Norte.—Balance, provincial fund, July 1, 1903, ₱4,688.96, 35,525.27 pfs. Revenues collected: Provincial, ₱35,904.86, 25,375.93 pfs.; municipal, ₱48,995.09, 48,826.54 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,155.90. Cash balance, provincial fund, June 30, 1904, ₱5,379.24.

Ilocos Sur.—Balance, provincial fund, July 1, 1903, ₱1,805.16, 19,099.32 pfs. Revenues collected: Provincial, ₱43,119.47, 29,059.25 pfs.; municipal, ₱61,818.09, 58,705.02 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,678.25. Cash balance, provincial fund, June 30, 1904, ₱17,826.46, 13,058.69 pfs.

Iloilo.—Balance, provincial fund, July 1, 1903, ₱5,508.38, 1,400.01 pfs. Revenues collected: Provincial, ₱87,488.08, 73,058.65 pfs.; municipal, ₱105,783.40, 152,507.05 pfs. Refunds by warrant of internal revenue and forestry collections, ₱11,688.49. Cash balance, provincial fund, June 30, 1904, ₱43,525.12, 9,684.98 pfs.

Isabela.—Balance, provincial fund, July 1, 1903, ₱1,335.84, 8,992.54 pfs. Revenues collected: Provincial, ₱13,300.20, 46,204.10 pfs.; municipal, ₱15,736.43, 68,801.34 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,595.68. Cash balance, provincial fund, June 30, 1904, ₱4,672.04, 13,575.77 pfs.

Laguna.—Balance, provincial fund, July 1, 1903, ₱24.60, 2,048.02 pfs. Revenues collected: Provincial, ₱53,672.91, 46,090.22 pfs.; municipal, ₱75,524.80, 100,061.87 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,319.97. Cash balance, provincial fund, June 30, 1904, ₱39,298.01, 6,568.19 pfs.

Lepanto-Bontoc.—Balance, provincial fund, July 1, 1903, ₱12,410.20 pfs. Revenues collected: Provincial, ₱272.22, 106.78 pfs.; municipal, ₱4,208.30, 8,194.58 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5.42. Cash balance, provincial fund, June 30, 1904, ₱9,123.48, 2,858.48 pfs.

Leyte.—Balance, provincial fund, July 1, 1903, ₱197.50, 42,969.07 pfs. Revenues collected: Provincial, ₱191,255.78, 49,987.93 pfs.; municipal, ₱133,082.59, 57,431.01 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,744.51. Cash balance, provincial fund, June 30, 1904, ₱24,864.40, 4,826.75 pfs.

Marbato.—Balance, provincial fund, July 1, 1903, ₱122.94, 4,771.72 pfs. Revenues collected: Provincial, ₱7,625.27, 3,172.35 pfs.; municipal, ₱9,420.86, 4,974.39 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,848.53. Cash balance, provincial fund, June 30, 1904, ₱8,583.99.

Surigao.—Balance, provincial fund, July 1, 1903, ₱132.98, 2,701.64 pfs. Revenues collected: Provincial, ₱7,835.34, 25,778.76 pfs.; municipal, ₱8,619.29, 27,796.84 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,572.58. Cash balance, provincial fund, June 30, 1904, ₱6,432.57, 956.49 pfs.

Tarlac.—Balance, provincial fund, July 1, 1903, ₱20,313.12, 27,105.25 pfs. Revenues collected: Provincial, ₱50,977.56, 19,103.05 pfs.; municipal, ₱68,001.41, 36,646.59 pfs. Refunds by warrant of internal revenue and forestry collections, ₱10,064.78. Cash balance, provincial fund, June 30, 1904, ₱42,982.64, 878.61 pfs.

Tagabas.—Balance, provincial fund, July 1, 1903, ₱18,330.40, 37,345.20 pfs. Revenues collected: Provincial, ₱56,242.36, 32,431.08 pfs.; municipal, ₱80,772.55, 59,414.10 pfs. Refunds by warrant of internal revenue and forestry collections, ₱50,056.54. Cash balance, provincial fund, June 30, 1904, ₱27,986.37, 12,222.75 pfs.

Union.—Balance, provincial fund, July 1, 1903 (balance due officer), 2,863.34 pfs. Revenues collected: Provincial, ₱27,588.60, 29,206.51 pfs.; municipal, ₱36,352.03, 52,437.86 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,813.43. Cash balance, provincial fund, June 30, 1904, ₱2,884.02, 10,597.26 pfs.

Zambales.—Balance, provincial fund, July 1, 1903, ₱1,652.82, 2,820.96 pfs. Revenues collected: Provincial, ₱10,656.60, 10,493.41 pfs.; municipal, ₱14,825.75, 20,537.74 pfs. Refunds by warrant of internal revenue and forestry collections, ₱11,260.05. Cash balance, provincial fund, June 30, 1904, ₱8,602.96, 11.50 pfs.

Moro Province.—(Organized July 15, 1903.) Revenues collected:

Districts.	Provincial.		Municipal.	
		<i>Pfs.</i>		<i>Pfs.</i>
Cottobato	₱10,423.32	11.32	₱5,966.98	
Davao	7,131.62	6,790.92	1,707.70	250.95
Zamboanga	10,808.55	5,193.73	12,839.80	4,469.06
Sulu	8,066.44	105.28	4,421.77	129.67
Lanao	5,403.62		2,929.66	
	41,863.55	12,101.25	27,865.91	4,849.68

Refunds by warrant of internal revenue and forestry collections, ₱37,656.39. Cash balance, provincial fund, June 30, 1904, ₱441,484.67, 464.04 pfs.

The large balance of provincial funds on hand June 30, 1904, arises mainly from the fact that the Commission appropriated ₱300,000 out of the Congressional relief fund for the construction of roads, etc., in the Moro province which had not been expended at the close of the fiscal year.

The balance in the provincial treasuries, as stated above, includes provincial funds only. Municipal funds on deposit with provincial treasurers and amounts due to municipalities are not taken into consideration. The report of the auditor for the fiscal year 1904 shows that the total collections in the provinces for provincial and municipal purposes were as follows:

	Value.	
		<i>Pfs.</i>
Total provincial revenues	₱1,517,741.20	1,168,879.59
Total municipal revenues	2,031,914.71	2,033,202.99
Total	3,549,655.91	3,232,082.58

Reducing the Mexican currency to Philippine currency at the rate of 1.10 to 1, and Philippine currency to United States at the rate of 2 to 1, there appears a grand total of provincial and municipal revenues, expressed in United States currency, amounting to \$3,243,956.40.

During the fiscal year 1903 the total revenues from the same sources, reductions having been made in the same way, amounted to \$2,715,105.53, showing an increase in collections during the fiscal year 1904 over the fiscal year 1903 amounting to \$528,850.87.

At the close of the fiscal year 1904 there were cash balances in the hands of the provincial treasurers amounting to \$740,398.85½, money of the United States, reductions of currency being made on the basis above stated. At the close of the fiscal year 1903 the cash balance of provincial funds in the hands of provincial treasurers amounted to \$446,547.87, in money of the United States, showing an increase of

Mindoro.—Balance, provincial fund, July 1, 1903, ₱2.80, 4,791.02 pfs. Revenues collected: Provincial, ₱6,873.89, 1,895.45 pfs.; municipal, ₱13,167.13, 14,061.54 pfs. Refunds by warrant of internal revenue and forestry collections, ₱9,224.46. Cash balance, provincial fund, June 30, 1904, ₱12.39, 3,975.73 pfs.

Misamis.—Balance, provincial fund, July 1, 1903, ₱1,690.46, 9,770.52 pfs. Revenues collected: Provincial, ₱11,555.72, 46,151.97 pfs.; municipal, ₱17,373.22, 62,266.83 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,658.89. Cash balance, provincial fund, June 30, 1904, ₱7,721.84, 7,525.89 pfs.

Nueva Ecija.—Balance, provincial fund, July 1, 1903, ₱4,698.38, 16,183.15 pfs. Revenues collected: Provincial, ₱31,794.06, 12,143.51 pfs.; municipal, ₱32,896.91, 12,198.24 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,122.54. Cash balance, provincial fund, June 30, 1904, ₱15,188.59, 413.81 pfs.

Nueva Vizcaya.—Balance, provincial fund, July 1, 1903, ₱9,467.70 pfs. Revenues collected: Provincial, ₱368.56, 142.39 pfs.; municipal, ₱12,747.23, 8,188.85 pfs. Refunds by warrant of internal revenue and forestry collections, none. Cash balance, provincial fund, June 30, 1904, ₱2,972.98, 739.31 pfs.

Occidental Negros.—Balance, provincial fund, July 1, 1903, ₱1,491.72, 5,284.33 pfs. Revenues collected: Provincial, ₱47,189.37, 32,142.47 pfs.; municipal, ₱57,758.59, 55,428.16 pfs. Refunds by warrant of internal revenue and forestry collections, ₱12,144.69. Cash balance, provincial fund, June 30, 1904, ₱20,509.74, 21,649.90 pfs.

Oriental Negros.—Balance, provincial fund, July 1, 1903, ₱1,908, 14,676.40 pfs. Revenues collected: Provincial, ₱20,582.39, 3,622.69 pfs.; municipal, ₱23,083.35, 49,707.77 pfs. Refunds by warrant of internal revenue and forestry collections, ₱2,514.06. Cash balance, provincial fund, June 30, 1904, ₱24,914.33, 3,084.31 pfs.

Pampanga.—Balance, provincial fund, July 1, 1903, ₱43,780.02, 59,386.51 pfs. Revenues collected: Provincial, ₱59,843.21, 19,978.38 pfs.; municipal, ₱80,666.43, 40,427.75 pfs. Refunds by warrant of internal revenue and forestry collections, ₱8,574.53. Cash balance, provincial fund, June 30, 1904, ₱64,325.43, 7,623.61 pfs.

Pangasinan.—Balance, provincial fund, July 1, 1903, ₱352.52, 39,577.48 pfs. Revenues collected: Provincial, ₱150,493.07, 51,419.29 pfs.; municipal, ₱216,719.97, 100,602.92 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,728.82. Cash balance, provincial fund, June 30, 1904, ₱66,085.43, 9,295.41 pfs.

Paragua.—Balance, provincial fund, July 1, 1903, 2,262.46 pfs. Revenues collected: Provincial, ₱2,473.62, 476.14 pfs.; municipal, ₱7,687.56, 5,773.83 pfs. Refunds by warrant of internal revenue and forestry collections, ₱7,442.85. Cash balance, provincial fund, June 30, 1904, ₱2,654.76.

Misamis.—Balance, provincial fund, July 1, 1903, ₱1,690.46, 9,770.52 pfs. Revenues collected: Provincial, ₱11,555.72, 46,151.97 pfs.; municipal, ₱17,373.22, 62,266.83 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,658.89. Cash balance, provincial fund, June 30, 1904, ₱7,721.84, 7,525.89 pfs.

Nueva Ecija.—Balance, provincial fund, July 1, 1903, ₱4,698.38, 16,183.15 pfs. Revenues collected: Provincial, ₱31,794.06, 12,143.51 pfs.; municipal, ₱32,896.91, 12,198.24 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,122.54. Cash balance, provincial fund, June 30, 1904, ₱15,188.59, 413.81 pfs.

Nueva Vizcaya.—Balance, provincial fund, July 1, 1903, 9,467.70 pfs. Revenues collected: Provincial, ₱368.56, 142.39 pfs.; municipal, ₱12,747.23, 8,188.85 pfs. Refunds by warrant of internal revenue and forestry collections, none. Cash balance, provincial fund, June 30, 1904, ₱2,972.98, 739.31 pfs.

Occidental Negros.—Balance, provincial fund, July 1, 1903, ₱1,491.72, 5,284.33 pfs. Revenues collected: Provincial, ₱47,189.37, 32,142.47 pfs.; municipal, ₱57,758.59, 55,428.16 pfs. Refunds by warrant of internal revenue and forestry collections, ₱12,144.69. Cash balance, provincial fund, June 30, 1904, ₱20,509.74, 21,649.90 pfs.

Oriental Negros.—Balance, provincial fund, July 1, 1903, ₱1,908, 14,676.40 pfs. Revenues collected: Provincial, ₱20,582.39, 3,622.69 pfs.; municipal, ₱23,083.35, 49,707.77 pfs. Refunds by warrant of internal revenue and forestry collections, ₱2,514.06. Cash balance, provincial fund, June 30, 1904, ₱24,914.33, 3,084.31 pfs.

Pampanga.—Balance, provincial fund, July 1, 1903, ₱43,780.02, 59,386.51 pfs. Revenues collected: Provincial, ₱59,843.21, 19,978.38 pfs.; municipal, ₱80,666.43, 40,427.75 pfs. Refunds by warrant of internal revenue and forestry collections, ₱8,574.53. Cash balance, provincial fund, June 30, 1904, ₱64,325.43, 7,623.61 pfs.

Pangasinan.—Balance, provincial fund, July 1, 1903, ₱352.52, 30,577.48 pfs. Revenues collected: Provincial, ₱150,493.07, 51,419.29 pfs.; municipal, ₱216,719.97, 100,602.92 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,728.82. Cash balance, provincial fund, June 30, 1904, ₱66,085.43, 9,295.41 pfs.

Paragua.—Balance, provincial fund, July 1, 1903, 2,262.46 pfs. Revenues collected: Provincial, ₱2,473.62, 476.14 pfs.; municipal, ₱7,687.56, 5,773.83 pfs. Refunds by warrant of internal revenue and forestry collections, ₱7,442.85. Cash balance, provincial fund, June 30, 1904, ₱2,654.76.

Rizal.—Balance, provincial fund, July 1, 1903, ₱2,796.48, 1,609.64 pfs. Revenues collected: Provincial, ₱72,512.98, 30,510.40 pfs.; municipal, ₱99,826.79, 68,176.43 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,631.76. Cash balance, provincial fund, June 30, 1904, ₱32,815.04, 3,035.18 pfs.

Romblon.—Balance, provincial fund, July 1, 1903, ₱156.22, 2,613.49 pfs. Revenues collected: Provincial, ₱8,782.26, 18,740.70 pfs.; municipal, ₱11,681.77, 24,737.71 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,680.30. Cash balance, provincial fund, June 30, 1904, ₱15,215.53, 150.08 pfs.

Samar.—Balance, provincial fund, July 1, 1903, ₱2,333.62, 94,209.54 pfs. Revenues collected: Provincial, ₱51,395.59, 28,296.69 pfs.; municipal, ₱57,876.39, 37,162.86 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,931.25. Cash balance, provincial fund, June 30, 1904, ₱74,464.82, 3,798.24 pfs.

Sorsogon.—Balance, provincial fund, July 1, 1903, ₱16,886.20, 1,359.64 pfs. Revenues collected: Provincial, ₱58,682.68, 37,443.49 pfs.; municipal, ₱82,404.51, 74,481.80 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,848.53. Cash balance, provincial fund, June 30, 1904, ₱8,583.99.

Surigao.—Balance, provincial fund, July 1, 1903, ₱132.98, 2,701.64 pfs. Revenues collected: Provincial, ₱7,835.34, 25,778.76 pfs.; municipal, ₱8,619.29, 27,796.84 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,572.58. Cash balance, provincial fund, June 30, 1904, ₱6,432.57, 956.49 pfs.

Tarlac.—Balance, provincial fund, July 1, 1903, ₱20,313.12, 27,105.25 pfs. Revenues collected: Provincial, ₱50,977.56, 19,103.05 pfs.; municipal, ₱68,001.41, 36,646.59 pfs. Refunds by warrant of internal revenue and forestry collections, ₱10,064.78. Cash balance, provincial fund, June 30, 1904, ₱42,982.61, 878.61 pfs.

Tagabas.—Balance, provincial fund, July 1, 1903, ₱18,330.40, 37,345.20 pfs. Revenues collected: Provincial, ₱56,242.36, 32,431.08 pfs.; municipal, ₱80,772.55, 59,414.10 pfs. Refunds by warrant of internal revenue and forestry collections, ₱50,056.54. Cash balance, provincial fund, June 30, 1904, ₱27,986.37, 12,222.75 pfs.

Union.—Balance, provincial fund, July 1, 1903 (balance due officer), 2,863.34 pfs. Revenues collected: Provincial, ₱27,588.60, 29,206.51 pfs.; municipal, ₱36,352.03, 52,437.86 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,813.43. Cash balance, provincial fund, June 30, 1904, ₱2,884.02, 10,597.26 pfs.

Zambales.—Balance, provincial fund, July 1, 1903, ₱1,652.82, 2,820.96 pfs. Revenues collected: Provincial, ₱10,656.60, 10,493.41 pfs.; municipal, ₱14,825.75, 20,537.74 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,200.05. Cash balance, provincial fund, June 30, 1904, ₱8,602.96, 11.50 pfs.

Moro Province.—(Organized July 15, 1903.) Revenues collected:

Districts.	Provincial.		Municipal.	
		Pfs.		Pfs.
Cottobato	₱10,423.32	11.32	₱5,066.98	
Davao	7,131.62	6,790.92	1,707.70	250.95
Zamboanga	10,808.55	5,193.73	12,839.80	4,469.08
Sulu	8,066.44	105.28	4,421.77	129.67
Lanao	5,403.62		2,929.66	
	41,863.55	12,101.25	27,865.91	4,849.68

Refunds by warrant of internal revenue and forestry collections, ₱37,656.39. Cash balance, provincial fund, June 30, 1904, ₱441,484.67, 464.04 pfs.

The large balance of provincial funds on hand June 30, 1904, arises mainly from the fact that the Commission appropriated ₱300,000 out of the Congressional relief fund for the construction of roads, etc., in the Moro province which had not been expended at the close of the fiscal year.

The balance in the provincial treasuries, as stated above, includes provincial funds only. Municipal funds on deposit with provincial treasurers and amounts due to municipalities are not taken into consideration. The report of the auditor for the fiscal year 1904 shows that the total collections in the provinces for provincial and municipal purposes were as follows:

	Value.	
		Pfs.
Total provincial revenues	₱1,517,741.20	1,168,879.59
Total municipal revenues	2,031,914.71	2,033,262.99
Total	3,549,655.91	3,202,082.58

Reducing the Mexican currency to Philippine currency at the rate of 1.10 to 1, and Philippine currency to United States at the rate of 2 to 1, there appears a grand total of provincial and municipal revenues, expressed in United States currency, amounting to \$3,243,956.40.

During the fiscal year 1903 the total revenues from the same sources, reductions having been made in the same way, amounted to \$2,715,105.53, showing an increase in collections during the fiscal year 1904 over the fiscal year 1903 amounting to \$528,850.87.

At the close of the fiscal year 1904 there were cash balances in the hands of the provincial treasurers amounting to \$740,398.85½, money of the United States, reductions of currency being made on the basis above stated. At the close of the fiscal year 1903 the cash balance of provincial funds in the hands of provincial treasurers amounted to \$446,547.87, in money of the United States, showing an increase of

Mindoro.—Balance, provincial fund, July 1, 1903, ₱2,80, 4,791.02 pfs. Revenues collected: Provincial, ₱6,873.89, 1,895.45 pfs.; municipal, ₱13,167.13, 14,061.54 pfs. Refunds by warrant of internal revenue and forestry collections, ₱9,224.46. Cash balance, provincial fund, June 30, 1904, ₱12.39, 3,975.73 pfs.

Misamis.—Balance, provincial fund, July 1, 1903, ₱1,690.46, 9,770.52 pfs. Revenues collected: Provincial, ₱11,555.72, 46,151.97 pfs.; municipal, ₱17,373.22, 62,266.83 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,658.89. Cash balance, provincial fund, June 30, 1904, ₱7,721.84, 7,525.89 pfs.

Nueva Ecija.—Balance, provincial fund, July 1, 1903, ₱4,698.38, 16,183.15 pfs. Revenues collected: Provincial, ₱31,794.06, 12,143.51 pfs.; municipal, ₱32,896.91, 12,198.24 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,122.54. Cash balance, provincial fund, June 30, 1904, ₱15,188.59, 413.81 pfs.

Nueva Vizcaya.—Balance, provincial fund, July 1, 1903, 9,467.70 pfs. Revenues collected: Provincial, ₱368.56, 142.39 pfs.; municipal, ₱12,747.23, 8,188.85 pfs. Refunds by warrant of internal revenue and forestry collections, none. Cash balance, provincial fund, June 30, 1904, ₱2,972.98, 739.31 pfs.

Occidental Negros.—Balance, provincial fund, July 1, 1903, ₱1,491.72, 5,284.33 pfs. Revenues collected: Provincial, ₱47,189.37, 32,142.47 pfs.; municipal, ₱57,758.59, 55,428.16 pfs. Refunds by warrant of internal revenue and forestry collections, ₱12,144.69. Cash balance, provincial fund, June 30, 1904, ₱20,509.74, 21,649.90 pfs.

Oriental Negros.—Balance, provincial fund, July 1, 1903, ₱1,908, 14,676.40 pfs. Revenues collected: Provincial, ₱20,582.39, 3,622.69 pfs.; municipal, ₱23,083.35, 49,707.77 pfs. Refunds by warrant of internal revenue and forestry collections, ₱2,514.06. Cash balance, provincial fund, June 30, 1904, ₱24,914.33, 5,084.31 pfs.

Pampanga.—Balance, provincial fund, July 1, 1903, ₱43,780.02, 59,386.51 pfs. Revenues collected: Provincial, ₱59,843.21, 19,978.38 pfs.; municipal, ₱80,666.43, 40,427.75 pfs. Refunds by warrant of internal revenue and forestry collections, ₱8,574.53. Cash balance, provincial fund, June 30, 1904, ₱64,325.43, 7,623.61 pfs.

Pangasinan.—Balance, provincial fund, July 1, 1903, ₱352.52, 30,577.48 pfs. Revenues collected: Provincial, ₱150,493.07, 51,419.29 pfs.; municipal, ₱216,719.97, 100,602.92 pfs. Refunds by warrant of internal revenue and forestry collections, ₱5,728.82. Cash balance, provincial fund, June 30, 1904, ₱66,085.43, 9,295.41 pfs.

Paragua.—Balance, provincial fund, July 1, 1903, 2,262.46 pfs. Revenues collected: Provincial, ₱2,473.62, 476.14 pfs.; municipal, ₱7,687.56, 5,773.83 pfs. Refunds by warrant of internal revenue and forestry collections, ₱7,442.85. Cash balance, provincial fund, June 30, 1904, ₱2,654.76.

Rizal.—Balance, provincial fund, July 1, 1903, ₱2,796.48, 1,609.64 pfs. Revenues collected: Provincial, ₱72,512.98, 30,510.40 pfs.; municipal, ₱99,826.79, 68,176.43 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,631.76. Cash balance, provincial fund, June 30, 1904, ₱32,815.04, 3,035.18 pfs.

Romblon.—Balance, provincial fund, July 1, 1903, ₱156.22, 2,613.49 pfs. Revenues collected: Provincial, ₱8,782.26, 18,740.70 pfs.; municipal, ₱11,681.77, 24,737.71 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,680.30. Cash balance, provincial fund, June 30, 1904, ₱15,215.53, 150.08 pfs.

Samar.—Balance, provincial fund, July 1, 1903, ₱2,333.62, 94,209.54 pfs. Revenues collected: Provincial, ₱51,395.59, 28,296.69 pfs.; municipal, ₱57,876.39, 37,162.86 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,931.25. Cash balance, provincial fund, June 30, 1904, ₱74,464.82, 3,798.24 pfs.

Sorsogon.—Balance, provincial fund, July 1, 1903, ₱16,886.20, 1,359.64 pfs. Revenues collected: Provincial, ₱58,682.68, 37,443.49 pfs.; municipal, ₱82,404.51, 74,481.80 pfs. Refunds by warrant of internal revenue and forestry collections, ₱3,848.53. Cash balance, provincial fund, June 30, 1904, ₱8,583.99.

Surigao.—Balance, provincial fund, July 1, 1903, ₱132.98, 2,701.64 pfs. Revenues collected: Provincial, ₱7,835.34, 25,778.76 pfs.; municipal, ₱8,619.29, 27,796.84 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,572.58. Cash balance, provincial fund, June 30, 1904, ₱6,432.57, 956.49 pfs.

Tarlac.—Balance, provincial fund, July 1, 1903, ₱20,313.12, 27,105.25 pfs. Revenues collected: Provincial, ₱50,977.56, 19,103.05 pfs.; municipal, ₱68,001.41, 36,646.59 pfs. Refunds by warrant of internal revenue and forestry collections, ₱10,064.78. Cash balance, provincial fund, June 30, 1904, ₱42,982.64, 878.61 pfs.

Tagabas.—Balance, provincial fund, July 1, 1903, ₱18,330.40, 37,345.20 pfs. Revenues collected: Provincial, ₱56,242.36, 32,431.08 pfs.; municipal, ₱80,772.55, 59,414.10 pfs. Refunds by warrant of internal revenue and forestry collections, ₱50,056.54. Cash balance, provincial fund, June 30, 1904, ₱27,986.37, 12,222.75 pfs.

Union.—Balance, provincial fund, July 1, 1903 (balance due officer), 2,863.34 pfs. Revenues collected: Provincial, ₱27,588.60, 29,206.51 pfs.; municipal, ₱36,352.03, 52,437.86 pfs. Refunds by warrant of internal revenue and forestry collections, ₱1,813.43. Cash balance, provincial fund, June 30, 1904, ₱2,884.02, 10,597.26 pfs.

Zambales.—Balance, provincial fund, July 1, 1903, ₱1,652.82, 2,820.96 pfs. Revenues collected: Provincial, ₱10,656.60, 10,493.41 pfs.; municipal, ₱14,825.75, 20,537.74 pfs. Refunds by warrant of internal revenue and forestry collections, ₱11,260.05. Cash balance, provincial fund, June 30, 1904, ₱8,602.96, 11.50 pfs.

Moro Province.—(Organized July 15, 1903.) Revenues collected:

Districts.	Provincial.		Municipal.	
		Pfs.		Pfs.
Cottobato	₱10,423.32	11.32	₱5,966.98	
Davao	7,131.62	6,790.92	1,707.70	250.96
Zamboanga	10,848.55	5,193.73	12,839.80	4,469.06
Sulu	8,086.44	105.28	4,421.77	129.67
Lanao	5,403.62		2,929.66	
	41,863.55	12,101.25	27,865.91	4,849.68

Refunds by warrant of internal revenue and forestry collections, ₱37,656.30. Cash balance, provincial fund, June 30, 1904, ₱411,484.67, 464.04 pfs.

The large balance of provincial funds on hand June 30, 1904, arises mainly from the fact that the Commission appropriated ₱300,000 out of the Congressional relief fund for the construction of roads, etc., in the Moro province which had not been expended at the close of the fiscal year.

The balance in the provincial treasuries, as stated above, includes provincial funds only. Municipal funds on deposit with provincial treasurers and amounts due to municipalities are not taken into consideration. The report of the auditor for the fiscal year 1904 shows that the total collections in the provinces for provincial and municipal purposes were as follows:

	Value.	
		Pfs.
Total provincial revenues	₱1,517,741.20	1,168,879.59
Total municipal revenues	2,031,914.71	2,051,262.99
Total	3,549,655.91	3,220,142.58

Reducing the Mexican currency to Philippine currency at the rate of 1.10 to 1, and Philippine currency to United States at the rate of 2 to 1, there appears a grand total of provincial and municipal revenues, expressed in United States currency, amounting to \$3,243,956.40.

During the fiscal year 1903 the total revenues from the same sources, reductions having been made in the same way, amounted to \$2,715,105.53, showing an increase in collections during the fiscal year 1904 over the fiscal year 1903 amounting to \$528,850.87.

At the close of the fiscal year 1904 there were cash balances in the hands of the provincial treasurers amounting to \$740,398.85½, money of the United States, reductions of currency being made on the basis above stated. At the close of the fiscal year 1903 the cash balance of provincial funds in the hands of provincial treasurers amounted to \$446,547.87, in money of the United States, showing an increase of

cash on hand amounting to \$293,850.78½. It will be observed that the provinces and municipalities, on the whole, were in better condition during the fiscal year 1904 than during the fiscal year 1903.

The following data show sums received by the various provinces not accruing from direct taxes collected within the provinces:

Advances from Insular funds to provinces where the provincial treasurer has lost funds-----	\$7, 834. 25
Forestry refunds-----	141, 138. 76
Loans to provinces from Congressional relief funds and insular funds-----	100, 942. 50
Appropriations to provinces from Congressional relief funds-----	175, 000. 00
Appropriations for provincial purposes to provinces not organized under the general provincial-government act-----	108, 588. 27½
Payments to provinces as reimbursements for payments made by them for the insular government, such as payment of rewards---	2, 414. 17½
Total -----	535, 922. 96

HENRY C. IDE,

Secretary of Finance and Justice.

To the PHILIPPINE COMMISSION.

EXHIBIT 1.

ANNUAL REPORT OF THE CLERK OF LAND REGISTRATION.

MANILA, P. I., *September 15, 1904.*

SIR: In accordance with your instructions I have the honor to submit the following report of work of this court for the period September 1, 1903, to August 31, 1904:

The judges and clerk of the court are the same as at the time of the organization on February 1, 1903.

Since the last annual report, rendered on September 14, 1903, the business of the court has materially increased and its usefulness is being demonstrated to a far greater degree than was the case up to that time. Up to September 1, 1903, the total number of applications filed was 144, while the total number on September 1, 1904 was 977, showing a total of 833 received during the year, being an average of approximately 70 per month. This increase in the number of applications may be ascribed to several causes:

First. That a knowledge of "the land registration act" is becoming more widespread throughout the provinces.

Second. That on account of lands reserved for civil and military reservations it has been obligatory upon many people to register their titles in order that the government could determine who are the true owners of the lands desired to be purchased.

Third. That the examiners of titles have, in most instances, exerted their energies to explain the workings of the law and assist property owners in the preparation of their applications for presentation to this court.

Fourth. The court has held several sessions in different provinces, and the people in such provinces have been convinced of the fact that this court was organized for the whole archipelago and not alone for Manila, they having had the impression prior to the holding of such provincial sessions that, while the law provided that the court had jurisdiction throughout the archipelago, still, as was the case under the former régime, many benefits which on their face were intended for the entire archipelago could only be properly embraced by people in or near Manila.

Between September 1, 1903, and August 31, 1904, 833 applications for registration were filed, as follows:

Abra	1	Cebu	25
Albay	53	Cottabato	2
Ambos Camarines	6	Davao	3
Bataan	62	Ilocos Norte	7
Benguet	27	Ilocos Sur	2
Bohol	1	Iloilo	107
Bulacan	20	Jolo	6
Agayay	1	Laguna	12
Cavite	27	Leyte	17

Manila	263	Rizal	62
Masbate	2	Samar	7
Mindoro	1	Sorsogon	10
Misamis	1	Surigao	10
Negros Occidental	4	Tarlac	2
Nueva Ecija	4	Tayabas	9
Pangasinan	3	Union	31
Pampanga	11	Zambales	1
Paragua	2	Zamboanga	31

The value of the property included in the above applications amounts to \$4,494,543.91 United States currency, making a total value of all applications received since the organization of the court of \$5,809,407.11 United States currency. This value not only compares favorably with results achieved in like time in other States and countries which have adopted the Torrens system of registration, but is far in excess of most other places where the system has been adopted.

Included among the applications presented are some of the largest haciendas in the islands, principal among which are those of Nasugbu in the province of Batangas; Mandaloyong and Pasay, province of Rizal, and the Valle de Sabini in the province of Nueva Ecija.

The following is a statement of the cases considered by this court during the period covered by this report:

	Manila.	Prov- inces.	Total.
Number of sessions	242	46	288
Cases decreed:			
Final	163	38	201
Appealed	5	2	7
Cases denied:			
Final	4	2	6
Appealed	2	2	4
Cases withdrawn	10	5	15
Cases pending	108	570	678
Cases opposed	42	110	152
Number of written oppositions	85	1,289	1,374
Number of persons included in above oppositions	120	1,399	1,510

In addition to the cases decreed many others were set for hearing, but it was impossible to decree the title to same on account of defects in titles or plans which must be rectified before decree is entered.

The court has held adjourned sessions in the following provinces outside the city of Manila:

Place.	Date	Days	Number of cases heard	Number of cases decreed.
Jolo, Jolo	Jan 4	1	1	1
Lingayen, Pangasinan	Jan 11	1	1	None.
Corregidor, Cavite	Jan. 18 and 19	2	18	None.
Hagonoy, Bulacan	Jan 21 and 22	2	3	None.
Cavite, Cavite	Jan 25	1	13	3
Baguio, Benguet	Feb. 1	1	1	None.
Los Baños, Laguna	Feb. 15	1	2	None.
Cebu, Cebu	Feb. 19 and 20	2	4	None.
Iloilo, Iloilo	Feb. 23, 24, 25, 26, 27, and 29	6	45	3
Mariveles, Bataan	Mar 7	1	5	None.
San Isidro, Nueva Ecija	Mar 10	1	3	None.
Do	Apr. 12 and 13	2	4	None.
Nasugbu, Batangas	Apr 23	1	1	None.
Maites, Bulacan	Apr 30	1	4	None.
Iloilo, Iloilo	May 24, 25, 26, 27, 28, and 31	6	77	4
Antipolo, Rizal	June 29 and 30	2	18	None.
Total		31	300	11

No cases denied.

It was thought that the court might be able to handle all cases without requesting the assignment of judges of courts of first instance, by referring the provincial cases to examiners of titles to take testimony. This method, however, has not given entire satisfaction, and, therefore, request was made to have two of the judges of courts of first instance assigned to this court temporarily, or until such time as the accumulated cases can be disposed of, which will probably be about December or January.

Quite a number of cases have been heard but not decreed, on account of the court awaiting the decision of the supreme court on certain points raised by the attorney-general and judge-advocate of the Philippine division, as to whether or not prescription runs against the government. One of these cases has been appealed to the supreme court and it was deemed better to await the decision of that body before entering any more decrees in similar cases, for the reason that if the court were to enter decree in all these cases the litigants would be put to needless expense in appealing from every decision, and one of the main objects of the court is to cause all parties concerned as little trouble and expense as possible.

All acting registers of deeds have been instructed to procure the necessary books and forms to be used in the registration of titles under the new system, and full instructions as to the proper method of using same were forwarded. However, as the said acting registers of deeds are the provincial treasurers, it is thought that with few exceptions they were so busy with their other duties as treasurers that no attention was paid to the instructions sent them and that the work of registration was delegated to some incompetent clerk.

As regards registrations made by provincial treasurers under the mortgage law, they are a farce. Upon investigation it was found that many offices had not a copy of the mortgage law and many of the treasurers were entirely ignorant of there being such a law in existence. When registers of deeds are appointed for the different provinces their first duties will be to attempt to straighten out the old books, but inasmuch as the records of all the provinces, with possibly two exceptions, were either partially or totally destroyed since 1896, and this in connection with the fact that most of the registrations made since the establishment of provincial governments are of no value and should not have been made in the first place, it is folly to expect to reestablish registration under the old system, and to put them in the same condition as they were prior to the revolution of 1896.

Some persons who have purchased property have had their documents registered, presuming that the laws were such as to permit the registration of all documents; other persons, with intent to defraud, have taken advantage of the acting registers of deeds' ignorance and secured registration of documents which they knew should not be admitted for record. It matters not whether their intentions were honest; the fact remains that the registration is of no value, and while the nullification by the courts in the future of such registrations may injure some, still it will only be justice in many cases, especially as regards those who registered documents with fraudulent intent.

Upon careful observation of the mortgage law it will be found that it was intended to cover both registration and abstracting.

If properly executed in all its parts, it is far superior to the general system used in America, and in its execution it closely resembles the Torrens law. No piece of property was supposed to be registered unless the person or persons could produce satisfactory evidence of title. Each parcel admitted for registration was given a distinct number, and separate pages devoted to each property. After the original registration of a parcel of land all future transactions relative to same were entered successively, each entry being given a consecutive number. For instance, suppose the property was registered as "Finca No. 781," the next record of a transaction affecting said property would immediately succeed the first registration and be numbered serially beginning with No. 1. If all the provisions of the law were correctly carried out, it would be possible at any time to trace a title and all transactions relating to same from the last entry to the first without inconvenience. Notwithstanding the excellent theory of the mortgage law, on account of the great negligence of property owners it never accomplished its object in these islands, and it is safe to say that not 10 per cent of the property in the Philippines was brought under its provisions.

The mortgage law became effective in these islands on December 1, 1889, and its provisions were in effect for a period of between seven and eight years, until the summer of 1898. Since 1898 to the present time, a period of seven years, it has not been observed throughout the provinces. It will be seen that its good effects are not evident except in Manila. While it is still in force, the property owners can not say that the new system is obligatory; still it is expected that when the registers of deeds have been appointed for the provinces, and they have straightened out the old registrations made by the treasurers, and they apply the provisions of the mortgage law as they should be applied, many persons will be unable to register their properties except under Act 496, and a corresponding increase in the number of applications should result.

One of the main obstacles to the progress of the Torrens system noted in the last annual report of this court was the lack of surveyors and the exorbitant fees charged by those obtainable. The requirements as to plans have been made as simple as possible, but the court can not afford to decree title unless satisfied that the plan and description of the land are correct. Under Act 1108 this court may now employ surveyors as soon as registers of deeds have been appointed and have assumed the duties of their offices. Each register of deeds will be called upon to report to this office when there is sufficient work to justify the court in sending a surveyor to his province. The fees to be charged by the court are very reasonable, and yet not so low as to cause loss to the Government, and it is hoped that this arrangement will relieve the situation, at least partially.

On account of the unreliable work done by many so-called surveyors in the Philippines, it would be a benefit, both to the court and to property owners, if these surveyors were required to pass some examination as to their qualifications. This examination need not be as strict as is necessary for a junior civil engineer, but let it be one to test the general ability of the applicant. All persons who have passed such an examination would benefit thereby, because persons desiring the services of a surveyor could feel more secure

if they knew the person employed by them was competent, and that the plans for which they have paid would not be proven later to be worthless, and be under the necessity of paying for a new plan to some person designated by the court.

On September 19 examiners of titles were appointed for the third and sixth judicial districts; on October 28 for the eighth and ninth judicial districts, and on November 11 for the eleventh judicial district. Immediately upon the appointees assuming the duties of their offices a marked change was noted in the number of applications received from all the districts with the exception of the third, which has only furnished a very few applications outside the military and civil reservations. Iloilo has led all other provinces in the number of applications, 107 having been presented, and this is due mainly to the efforts of the provincial treasurer and examiner of titles. Twenty-five applications have been received from Cebu, and all but three are due to the efforts of the examiner of titles.

It was found, upon investigation last fall by the undersigned, who personally visited both Cebu and Iloilo, that the people of Cebu were not only ignorant of the provisions of Act 496, but were not disposed to embrace its advantages for the reason that the old registration books in the province are in better condition than any other registration books in the archipelago, with the exception of Manila, Cebu being the only province that has registration books which are worthy the name.

Under certifications from the commanding general, Philippine Division, received through the civil governor, pursuant to Act 627, notices have been published and served by this court on all occupants of the military reservations of Bacon, island of Guimaras, Ormoc, Tacloban, Calbayog, Iloilo, Daraga, and Jolo, making the total number of military reservations so certified to this court 25.

As regards the 34 civil reservations for light-house purposes, the court has experienced great difficulty in posting and serving the notices necessary under the provisions of Act 648. During the month of November the undersigned visited and posted and served notices on a majority of these reservations, and notices sufficient to cover the remainder were forwarded to the light-house keepers on each reservation not already served and posted. To date returns have not been received from several of these stations, and it is feared that on account of the irregularity of steamers visiting the said points that some of them have not been properly served and posted, and it may be necessary to secure legislation allowing an extension of time to any claimants of the land in which to present their applications. However it is thought that none of the land within the reservations which were not served and posted within the prescribed time belongs to private individuals, but is property of the Government. It was found that where the lands reserved for light-house purposes were occupied the people had no title whatever, other than possession, and in addition were too poor and too ignorant to make the necessary application.

In addition to the above, the reservations of Trinidad, Benguet; Magay, Zamboanga, and Culion, Paragua, have been certified to this court by the civil governor, and the necessary notices have

either been posted or are posting on same. Outside of the reservations of Trinidad, Benguet, Baguio, Benguet, and the island of Batan, practically no applications have been received as a result of reservations by the civil government.

Respectfully submitted.

J. R. WILSON,
Clerk of the Court.

Hon. HENRY C. IDE,
Secretary of Finance and Justice, Manila.

EXHIBIT 2.

ANNUAL REPORT OF THE ATTORNEY-GENERAL FOR THE PHILIPPINE ISLANDS.

OFFICE OF THE ATTORNEY-GENERAL,
Manila, P. I., September 15, 1904.

SIR: In compliance with the instructions contained in your communication of September 6, I have the honor to submit the following report covering the work of the Philippine judiciary for the year ending August 31, 1904. I shall divide the report into two parts. The first part will contain a statement of the work that has been accomplished by the courts, and the second a statement of the operations of this bureau:

PART FIRST.

I.—SUPREME COURT.

The following statistics, furnished by the clerk of the supreme court, show the work of that tribunal during the year, and the condition of business on August 31, 1904:

Number of cases pending September 1, 1903:	
Civil.....	103
Criminal.....	236
Number of cases filed during year ending September 1, 1904:	
Civil.....	189
Criminal.....	486
Number of cases decided during said year in which opinions have been filed:	
Civil.....	57
Criminal.....	176
Number of cases otherwise disposed of:	
Civil.....	19
Criminal.....	30
Number of cases pending September 1, 1904:	
Civil.....	216
Criminal.....	516
Changes among supreme court justices:	
Resignations.....	2
Number of applicants for admission to the bar:	
Americans.....	31
Philippines.....	113
Number who passed the bar examination:	
Americans.....	24
Filipinos.....	62
Number of cases "ready for argument":	
Civil.....	35
Criminal.....	180
Fees received during said year:	
Local currency.....	\$1,266. 76
Philippine currency.....	P7,792. 44

It appears from the foregoing figures that on September 1, 1903, there were 103 civil cases pending in the supreme court and that on September 1, 1904, there were 216, more than double the number pending at the beginning of the year. The criminal docket, as disclosed by the above report, indicates an increase of 280 cases. It thus appears that the docket is now twice as large as it was a year ago. The clerk of the supreme court calls attention to several matters relating to the administration of his office, to which attention is specially called. His report in full is attached hereto and marked "Exhibit A."

II.—COURT OF FIRST INSTANCE, CITY OF MANILA.

The full report of the clerk of the court of first instance for the city of Manila is attached hereto and marked "Exhibit B." An idea of the business of the court for the year which has just closed can be gathered from the following figures:

Civil branch.

Number of civil cases—	
On file September 1, 1903.....	442
Filed during the year.....	850
Decided during year.....	287
Dismissed upon motion of plaintiff during year.....	49
On docket September 1, 1904.....	956
An increase over September 1, 1903, of.....	514

Criminal branch.

Number of criminal cases—	
On file September 1, 1903.....	82
Filed during year.....	649
Decided during year.....	498
Dismissed during year.....	75
On docket September 1, 1904.....	731
An increase over September 1, 1903, of.....	158

Probate division.

Number of probate cases—	
On file September 1, 1903.....	337
Filed during year.....	210
Disposed of during year.....	88
Pending September 1, 1904.....	459

Revenue.

	Pfs.	Pesos.
Civil cases: Costs received during year.....	1,652.63	16,292.77
Criminal cases: Costs received during year.....	101.48	534.87
Fines and forfeited bails:		
Fines received during year.....	1,485.00	2,445.76
Bail bonds forfeited during year.....	605.00	6,000.00
Total.....	3,844.11	25,273.40

According to the foregoing figures, there were on the docket at the beginning of the year 442 civil cases and at the close of the year 956. This shows an increase of 514 cases during the year. The criminal branch is in a better condition. There were 88 criminal cases on the docket at the beginning of the year and only 158 at the end of the year. There were 573 cases disposed of during the year, of which 498 were decided and 75 dismissed.

The clerk of the court, in his report attached hereto, makes complaint, in which he is joined by the judges and the prosecuting attorney, that the business of the court is retarded by reason of the lack of proper interpreters. The report states that the present force is altogether inadequate. I am in a position to confirm this statement, in measure, because it has frequently become necessary for this office to furnish assistance in the matter of interpreters. This is also true with reference to the work of translating the records for appeals to the supreme court. In view of the fact that the translating force of this office has been reduced by the last appropriation bill, I am not in a position to respond to these requests without inconvenience and hardship. This complaint can be overcome by employing a better class of interpreters and translators. My experience is that a better class is available and that the expenditure of a small extra amount of money will put the clerical force of the court on a proper basis.

III.—COURTS OF FIRST INSTANCE FOR THE PROVINCES.

The following table contains the record of the courts of first instance throughout the archipelago, with the exception of the province of Paragua, on the following points: The number of civil and criminal cases on the docket at the beginning of the year; the number of civil and criminal cases filed during the year; the number of civil and criminal cases decided during the year; and the number of civil and criminal cases otherwise disposed of; also a statement of the condition of the docket at the end of the year. In addition to this the report covers a statement of the amount of money collected within the period under consideration.

Total.	48,653.50	4,824.55	31,664.59	2,020.05

The totals of the foregoing report are as follows:

Civil cases on docket September 1, 1903.....	1,882
Civil cases filed during year.....	2,117
Civil cases decided during year.....	1,057
Civil cases otherwise disposed of.....	729
Civil case on docket September 1, 1904.....	2,213
Criminal cases on docket September 1, 1903.....	2,946
Criminal cases filed during year.....	5,906
Criminal cases decided during year.....	3,640
Criminal cases otherwise disposed of.....	2,805
Criminal cases on docket September 1, 1904.....	2,407
Costs received in civil cases:	
Philippine currency.....	P 48,655.50
Local currency.....	Pfs. 4,824.55
Costs received in criminal cases:	
Philippine currency.....	P 31,644.59
Local currency.....	Pfs. 2,020.05

According to this table there are now on the dockets in the courts of first instance for the provinces 431 civil cases more than there were at the beginning of the year, while in the criminal branch the records show there were 539 cases less on the docket at the end of the year than at the beginning of the year. It will be noticed that there has been a somewhat similar trend to the figures of the business of the courts in the provinces and in the city of Manila.

COURT OF LAND REGISTRATION.

Since the court of land registration has made a full report to you direct, I shall only inclose herewith the following short synopsis of the work of that court during the year ending August 31, 1904:

Number of cases on file September 1, 1903.....	144
Number of cases filed during year.....	833
Number of cases decided during year.....	221
Number of cases otherwise disposed of.....	15
Number of cases on docket September 1, 1904.....	977
Amount of costs received during year:	
Philippine currency.....	P 28,607.74½
Mexican and Spanish-Filipino currency.....	Pfs. 761.17

The full report is attached hereto and marked "Exhibit C."

COURT OF CUSTOMS APPEALS.

The operations of the court of customs appeals are disclosed by the following figures furnished by the clerk of said court. His report in full is attached hereto and marked "Exhibit D."

Cases on file at beginning of the year.....	17
Cases filed during the year.....	184
Total.....	201
Cases disposed of.....	159
As follows:	
By judgment of the court.....	152
By dismissal before trial, on motion of attorney-general.....	6
By dismissal before trial, on motion of the appellant.....	1
Cases pending before the court.....	42

PART SECOND.

OFFICE OF THE ATTORNEY-GENERAL.

For a period of eight months of the year covered by this report the bureau of justice was in charge of the solicitor-general, Hon. Gregorio Araneta, as acting attorney-general.

I shall discuss the work of the bureau under three heads, giving in the first place a summary of the work done by the bureau in Manila; in the second place a discussion of the operations of the office outside of Manila, including an account of the condition of business in the provinces; and in the third place an account of the trial of some cases which have been heard and finally determined by the courts of last resort and finally passed upon.

I.

Written opinions rendered by the attorney-general to the chief executive, the heads of the four executive departments, chiefs of bureaus, and other officials.....	537
Cases in the supreme court disposed of by brief and argument.....	316
Cases in the supreme court disposed of by motion, etc.....	85
Suits against the United States, or officers of the Army or Navy, receiving attention.....	5
Petitions for pardon passed upon.....	776
Permanent appointments of employees in the bureau of justice.....	77
Temporary appointments of employees in the bureau of justice.....	24
Official communications written or receiving the attention of the office and disposed of, other than opinions, cases, pardons, and appointments.....	2,974
Cases disposed of in the court of land registration after trial.....	58
Cases disposed of in the court of land registration without trial.....	133

II.

The reports submitted to me by Mr. James Ross, supervisor of fiscals; and Mr. George R. Harvey, assistant attorney-general for the Philippine constabulary, which are attached hereto and marked "Exhibits E and F," and the foregoing statistics which have been furnished by the clerks of the courts of the provinces, disclose a situation with reference to three branches of the service which I desire to call to the attention of the head of the department. Attention is invited to those parts of said reports which relate, first, to the provincial fiscal; second, to the justice of the peace; and third, to the constabulary officer. The work of these three officials is very closely related, and their cooperation is essential to the successful administration of justice in the provinces. An analysis of the foregoing statistics relating to the business of the courts of first instance for the provinces shows that of the 6,445 cases disposed of 2,805 were dismissed. In other words, 43.50 per cent of all the cases brought were dismissed without a trial. In addition to this information I have asked the clerks of the courts of first instance for a statement showing the number of acquittals and convictions in the cases that were actually tried. I have received answers from 30 of the 49 provinces. These statements show that of the 56.50 per cent of the total number of cases filed which were actually tried 35 per cent were acquitted and 65 per cent convicted. To state the case in another way, in all the cases disposed of during the year there were convictions in 37 per cent, and 63 per cent were either dismissed or lost to the government. The report of the prosecuting attorney for the city of Manila shows that in the court of first instance for Manila there were convictions in 68 per cent of the cases instituted, acquittals in 22 per cent, and dismissals in 10 per cent.

The supervisor of fiscals, in his report attached hereto, in discussing this phase of the service, makes the following remarks:

I have found these officials (fiscals), as a rule, performing the duties of their office in a reasonably satisfactory manner, and in some cases with a high degree of efficiency. The greatest fault I have observed in the work of the fiscals is that they consume too much of the time of the courts in presenting cases which should never have been brought to trial, and in which a careful investigation would have shown that an acquittal must result. They also, I find, file a large number of informations without a sufficient preliminary investigation, which, when the cases come to trial, they are obligated to dismiss. As a rule they are not as careful and painstaking as they should be in preparing their cases for trial, and as a result are frequently surprised by the testimony of their witnesses, and lose cases where convictions should be secured, and could be by careful study and preparation before going to trial. I have endeavored by counsel, advice, and example where I have had an opportunity to take an active part in trials, to correct these faults, and I think I may say that I have met with a fair degree of success.

The practices with which I here have occasion to find fault are due to several causes, the principal ones being: (1) Lack of a perfect understanding of the new criminal procedure; (2) in some cases failure to exercise the highest degree of diligence and industry; and (3), the ignorance and inefficiency of a great many justices of the peace, who hold preliminary examinations and forward to the provincial fiscals voluminous reports in a great many cases where there is no legal foundation for criminal complaints, or where the evidence is insufficient, when presented to the court of first instance, to warrant convictions. It must be said, however, that notwithstanding the ignorance and inefficiency of the justices of the peace in these matters, the fiscals could, by exercising a greater degree of diligence in examining the records sent up to them, and by conducting investigations on their own account, save a great deal of the time of the courts and avoid the loss of prestige in the public mind on account of such a large list of dismissals and acquittals as frequently results from sessions of the courts of first instance in the various provinces.

It appears from the information contained in the reports attached hereto, and from our general experience, that the working of the present system of justices of the peace is far from satisfactory. The supervisor of fiscals, in his report, discusses this branch of the service in the following language:

I have heretofore in this report referred to the incompetency and ignorance of many of the justices of the peace. Instead of "many" I could have said "most," and might even have employed a stronger term. * * * Sometimes, and only too frequently, in addition to their ignorance, these justices are found to be either grossly dishonest or else under the influence of a sharp and tricky secretary or "consultor," as he is sometimes styled, who, from his superior education and intelligence, dominates the justice of the peace, exercises a strong influence, and preys upon the wretched inhabitants of the community. With these men the motto in all too many cases is, "A public office is a public graft," and they prey upon the poor people of the country like wild beasts.

I trust I may not be charged with drawing too lurid a picture of this evil. My endeavor is to state only the facts as they have come to my knowledge, not only during the last year, but in several years' previous experience in these islands. It is true that a close and careful supervision of these justices by the provincial authorities, including the governor and the fiscal, would result in a marked improvement; but such supervision is often impracticable and even impossible, owing to the wide territorial extent of the provinces, the lack of communication, and the manifold occupations and duties of the provincial officials. * * * The remedy for the justice-of-the-peace evil, in my opinion, is as follows: Divide each province into groups of pueblos, formed into convenient districts. Appoint to these districts, after a careful scrutiny of their character and qualifications (it might even be well to make the appointment subject to examination), men of known intelligence, education, and standing in their respective communities, under salary or an allowance of fees which would enable them to give their time to the performance of their duties without serious detriment to their private interests.

On the work of the constabulary officials in the provinces in connection with prosecutions, I desire to call attention to the comments of Mr. Harvey, found on page 8 of his report, attached hereto. In conclusion, he says:

I desire to state that in my work in the provinces I have observed that the "bond of union" between the provincial fiscal and the officers of the constabulary is not always as

strong as it should be; in fact, their misconception of their respective duties leads each to wrong conclusions as to the conduct of the other, and often brings them into open conflict. This is largely true also as between the constabulary officers and the justices of the peace. On the one hand, the constabulary officers are usually more accustomed to the military procedure in criminal matters, and often do not understand the requirements of the law under a civil government; on the other hand, the fiscals and the justices of the peace, if they have any training at all, are accustomed to the Spanish methods of procedure, and it is difficult for them to become acquainted with the new way of doing things.

RECOMMENDATIONS.

It will be observed from the foregoing report and statistics that the public service in the provinces needs reenforcement in three branches, namely, fiscals, justices of the peace, and constabulary officers. While the fiscals only come under the jurisdiction of this bureau, yet these officials are so interdependent in the performance of their duties that the full cooperation of all is essential to the success of each. It is impossible to discuss the work of any one of the foregoing branches of the service without considering the others. Hence, in making my recommendations on the needs of the provincial fiscals I will naturally touch upon and, in a measure include, the justices of the peace and the constabulary officers. I assume that the Commission will at an early date take steps to reform the present justice-of-the-peace system. The demand for this is universal. After talking with the judges of the courts of first instance from the provinces and the traveling representatives of this office, as well as with some of the provincial governors, I am convinced that no one who has not been in the provinces and come in actual contact with the people and with the operations of the justice courts can form any adequate conception of the extent of the abuses of the present justice-of-the-peace system. It is said that the case against the present justices can not be overstated. While it does not come within my province to recommend what plan of reform should be adopted, I take the liberty of commending to your consideration the suggestions of the supervisor of fiscals, which I find are in accord with the recommendations of a large number of the judges of the courts of first instance in the provinces.

In order that the service of the provincial fiscals may be improved, I desire to recommend that the policy, formerly instituted, of affording the provincial fiscal systematic instruction in the performance of the duties of his office be given a wider scope and carried out with more system and thoroughness than it has in the past. It will be remembered that the purpose of the government in creating the offices of supervisor and deputy supervisor of fiscals, and appointing Americans to fill them, was to undertake in a systematic way the education of the provincial fiscal, who is almost invariably a Filipino, in the new methods of procedure and in the performance of the general duties of his office. The history of the work of this bureau discloses the fact that while the men who have filled these offices have accomplished much important work for the government, yet they have not performed the real functions of the offices to which they were appointed. Lieut. Grant T. Trent, now judge, and Mr. James Ross, the present incumbent, have been little more than traveling inspectors for the civil governor. Their reports to this office prove this. It should be stated that they have tried many important cases, as have the deputy supervisor of fiscals and the assistant

attorney-general for the Philippine constabulary. It is not my purpose to complain of the foregoing facts. The course pursued grew out of the situation, and was unavoidable. It is hoped, however, that the business of the islands has now reached a stage where these men may devote their time to schooling the above-named officials in the general duties of their offices.

My idea is to place four men in the field regularly, whose duty it shall be to assist and instruct the fiscal in the work of preparing and dispatching the entire body of the business that comes into his office, instead of devoting their time, as formerly, to trying important cases and making special investigations. I would suggest that they be assigned, for the sake of convenience, to each of the four constabulary districts north of Mindanao. (It would be well to include in the district of the Visayas the provinces of northern Mindanao, which are now under civil government.) We now have three men whose time might be devoted regularly to this work, namely, Messrs. James Ross, Edmond Block, and George R. Harvey. In order to execute this plan fully and satisfactorily, in my judgment one more American lawyer should be added to the force. Each of these men of course should report directly to this office, and special attention should be given to this branch of the work by the head of the bureau.

In the first place it would be well to issue a manual or circular letter to the provincial fiscals setting out the elementary principles of procedure and giving general directions for the management of their offices. I would also recommend that a special circular letter be prepared by the assistant attorney-general for the constabulary and sent out by the chief of the constabulary giving directions in detail to the provincial constabulary officers on their duties in the matter of making arrests and in assisting the fiscals and justices of the peace in procuring the necessary witnesses in all cases. While they have received general orders to cooperate with the fiscals in making prosecutions, in my opinion they should receive special instructions on the above-mentioned points. They are in a position to know who the material witnesses are and this information is of great value to the fiscal and should be gathered with care and given to him freely. In the third place I would suggest that after the present justice-of-the-peace system has been reformed and a new law of procedure adopted therefor a manual of instructions be issued to the justices of the peace of the archipelago.

However, the work needed to be done can not be accomplished by merely sending out written instructions from this and other bureaus. It is necessary for American fiscals of experience to go into the provinces and institute a campaign of education among the three branches of the service above mentioned which will be regular systematic, and persistent. I know of no other way to overcome the abuses which inhere in the present system. Of course if it were possible for the Commission to so change the system as to attract good men to this branch of the service, most of the abuses complained of would be eliminated by the new justices on their own initiative.

The foregoing policy, if carefully worked out, should yield indirect results which would materially benefit the service. It should enable us to remove one of the most serious flaws in our present system of administering justice in the provinces. I refer to the present practice

of requiring witnesses to attend court without even so much as furnishing them fees for subsistence during the time used in attending court and in going to and from their homes. The reason why this practice exists is because under the present system so many witnesses are subpoenaed, many of whom are useless, that it would bankrupt the provinces to pay them a reasonable fee. This system was in vogue during the Spanish time and the law on the subject has not been changed under American rule. The result is, the people look upon it as a continuation of one of the abuses of the old régime. It can not but have a detrimental effect upon the entire administration of justice throughout the archipelago. It results in prejudicing the people against the government generally, and against the courts in particular, in addition to placing a serious obstacle in the way of efficient administration of justice. This is not fair to the people and we should not deceive ourselves by believing that they do not have a full recognition and appreciation of the fact. Furthermore, on account of the hardship and injustice resulting from this practice, many good people will not make known to the government officials many criminal acts which come within their observation. Far from giving information and offering assistance to the government in the work of apprehending and punishing criminals, there is a marked disposition to conceal a knowledge of criminal acts and to evade the processes of the court, on account of the hardships and injustices to which they are subjected by the above-mentioned practice.

On this subject* the supervisor of fiscals makes the following remarks:

During the year I have attended a good many sessions of court, and this difficulty (lack of statutory provision for the payment of the expenses of traveling and subsistence incurred by witnesses attending court) has always been present to deal with. It is not due to any disrespect for the courts, on the part of the people of the country. The trouble is that the vast majority of the people subpoenaed as witnesses are extremely poor. It frequently happens that they are required to travel long distances to reach the capital—no transportation is available and they are obliged to come on foot from remote districts over roads which generally are not in the best condition and which in the rainy season are almost impassable, and all this without any means of defraying their traveling expenses or of maintaining themselves after their arrival at the capital. I have known of cases where people who were possessed of some small means, or who were able to borrow some money, have gone to large expense in hiring transportation in order to obey subpoenas, which expense practically bankrupted them and all their friends from whom they could borrow money.

There are many cases in which these people are absolutely unable to pay their expenses, and they either come to the capital in a half-starving condition, or else are obliged to depend upon the charity of the people en route. I do not believe that I have overdrawn my statements in regard to this matter, and from experience gained in traveling about the archipelago almost continually during the year, I can say that the conditions above stated are practically the same in all the provinces I have visited. * * * I most earnestly recommend this subject to your consideration.

I, in turn, desire to urge the Commission to give this subject consideration at the earliest possible date. This testimony of the supervisor of fiscals is corroborated by practically all of the judges of the courts of first instance in the provinces and all of the prosecuting officials who have been sent out by this office. Mr. Ross suggests that legislation be enacted authorizing the provincial board, on the certificate of the presiding judge and the fiscal, to meet the actual and necessary traveling expenses and subsistence of witnesses. I concur in this recommendation, at least as a temporary expedient. I believe that a small outlay of money would go far toward overcoming

this serious obstacle in the way of the administration of justice in these islands. As above stated, it is believed that the four men detailed from this office to take charge of the work above outlined would yield marked results in a short period in the way of reducing the number of witnesses subpoenaed to testify in the courts of first instance.

If the facilities for transportation were better the work above outlined might be done by three men, but under the present conditions I do not believe that three men can accomplish all that should be done. I think it would be well for the head of the bureau to make occasional trips to the provinces for the purpose of acquainting himself, in a general way, with the conditions as they exist there. This would have the further effect of bringing this bureau into closer touch with the provincial officials, which would naturally foster a spirit of cooperation between the two branches of the service.

I repeat that there is no disposition to find fault with the policy hitherto adopted by the civil governor with reference to using the representatives of this office for making special investigations in the provinces. I wish to suggest, however, that if the foregoing plan meets with the approval of the Commission the representatives of this office could still be used by the civil governor in making his investigations without materially affecting their work, if called upon to make them in their respective districts. The practice, however, of taking the supervisor of fiscals from one part of the archipelago to another for the purpose of making special investigations is fatal to the performance of the duties of his office as provided by law. Hence it will be seen that the cooperation of the civil governor is essential to the successful prosecution of the foregoing scheme. The suggestion that another man be added to the force of this bureau is made with the full realization of the condition of the insular treasury. I had hoped to accomplish this work without asking for help, but I find the business of the bureau increasing rapidly and it will be impossible for me to meet the demands of the situation in the provinces as I think they should be met with my present force. The foregoing policy is recommended on the grounds of economy as well as efficiency.

III.

During the year that has just ended a number of important cases have been decided by the courts of last resort which affect materially the administration of justice in these islands. The questions involved in these cases were:

First. The double jeopardy principle.

Second. The right of trial by jury in the Philippine Islands.

Third. The fixing of the standard of legal ethics in the islands.

In the cases of *Thomas E. Kepner v. The United States*, and *Secundino Mendezona v. The United States*, the Supreme Court of the United States gave judicial interpretation to that section of the Philippine government act which provides that "no person shall for the same offense be put twice in jeopardy or punishment." Under the Spanish law which was in force in these islands prior to the passage of the Philippine government act of July 2, 1902, the government, as well as the accused, had the right of appeal from judgments of the courts of first instance in criminal cases. In the above-mentioned

cases the appellants had been acquitted by the trial court and convicted in the supreme court of the islands. The appeal was taken to the Supreme Court of the United States on the ground that the decision of the supreme court of the islands was in violation of the provisions of the act of Congress above quoted. The government's position in this litigation was that the Supreme Court of the United States in interpreting the provision of the act of Congress in question should invoke the following canon of construction: It must be presumed that Congress, in passing the Philippine government act, was familiar with the local laws in the Philippine Islands and the judicial interpretation they had received at the hands of the supreme court of the islands, and that it legislated with special reference thereto. Under the Spanish law jeopardy did not end until after the supreme court had heard and passed upon the case. Hearing by the court of first instance and the supreme court were parts of one single and continuous trial. Mr. Justice Brown, in his dissenting opinion, made the following clear and vigorous statement of the Government's position in this case:

I think that in applying the principle to the Philippine Islands, Congress intended to use the words in the sense in which they had theretofore been understood in those islands. By that law, in which trial by jury was unknown, the jeopardy did not terminate if appeal were taken to the audiencia or supreme court until that body had acted upon the case. The proceedings before the court of first instance were in all important cases reviewable by the supreme court upon appeal, which finally acted upon the case and terminated the jeopardy. This was evidently the view of the military commander in General Orders, No. 58, and of the Philippine Commission in the act of August 10, 1901 (No. 194), in both of which an appeal to the supreme court was contemplated, even after a judgment of acquittal. * * * It seems to me impossible to suppose that Congress intended to place in the hands of a single judge the great and dangerous power of finally acquitting the most notorious criminals.

On the other hand, it was contended by the appellants that the statute should receive the same interpretation in this instance that similar statutes had always received from English and American judiciaries. Mr. Justice Day, who wrote the opinion of the court, stated the proposition in the following language:

In order to determine what Congress meant in the language used in the act under consideration, "No person for the same offense shall be twice put in jeopardy of punishment," we must look to the origin and source of the expression and the judicial construction put upon it before the enactment in question was passed. A consideration of the events preceding this regulation makes evident the intention of Congress to carry some at least of the essential principles of American constitutional jurisprudence to these islands and to engraft them upon the law of this people, newly subject to our jurisprudence.

The question whether Congress had the right to extend or to withhold from the Philippine Islands the right of trial by jury was determined by the Supreme Court of the United States in the case of *Edward F. O'Brien and Fred L. Dorr v. The United States*; or to state the proposition in a different way, did the right of trial by jury exist in the Philippine Islands after the date of the ratification of the treaty of Paris, irrespective of the act of Congress, or was it necessary for Congress to give the right by a special act? The foregoing gentlemen were the editor and proprietor of the *Manila Freedom*, a newspaper published and circulated in Manila. They were arrested on the charge of criminal libel. Their motion for a jury trial was denied by the trial court and the supreme court of these islands. An appeal was thereupon taken to the Supreme Court of the United States. Under the Spanish law in the Philippine Islands trials were conducted

by judges. Trial by jury was unknown. The law on the subject in the Philippine Islands has never been changed. The case was decided adversely to the contention of the plaintiffs in error by a vote of eight to one—Mr. Justice Harlan alone dissenting. This decision laid down the rule of constitutional interpretation with reference to our insular possessions, and in a large measure fixed the legal status of the Philippine Islands. Mr. Justice Day, in delivering the opinion of the court, used the following language:

If the right to trial by jury were a fundamental right which goes wherever the jurisdiction of the United States extends, or of Congress, in framing laws for outlying territory belonging to the United States was obliged to establish that system by affirmative legislation, it would follow that, no matter what the needs or capacities of the people, trial by jury, and in no other way, must be forthwith established, although the result may be to work injustice and provoke disturbance rather than to aid the orderly administration of justice. If the United States, impelled by its duty or advantages, shall acquire territory peopled by savages, and of which it may dispose or not hold for ultimate admission to statehood, if this doctrine is sound, it must establish there the trial by jury. To state such a proposition demonstrates the impossibility of carrying it into practice. Again, if the United States shall acquire by treaty the cession of territory having an established system of jurisprudence, where jury trials are unknown, but a method of fair and orderly trial prevails under an acceptable and long-established code, the preference of the people must be disregarded, their established customs ignored, and they themselves coerced to accept, in advance of incorporation into the United States, a system of trial unknown to them and unsuited to their needs. We do not think it was intended in giving power to Congress to make regulations for the territories, to hamper its exercise with this condition.

It will be observed that in its last analysis the proposition here laid down is that while there are some fundamental restrictions and prohibitions contained in the Constitution which are universal in their application and which can not be transcended by Congress at any time or place or under any circumstances, yet there are other restrictions which are not fundamental in their nature, such as those which relate to methods of procedure and forms of trial which do not necessarily restrict Congress in legislating for the unorganized territories of the United States. It is held in this case that the right of trial by jury is not a fundamental right and that Congress in legislating for the islands may withhold it if it sees proper. As stated before, Mr. Justice Harlan alone combatted the foregoing proposition. For a long period of years he has held a different view from that expressed in the opinion of Mr. Justice Day, and in the course of his dissenting opinion he stated his position in the following language:

I do not believe now any more than I did when *Hawaii v. Mankichi* (190 U. S., 197) was decided, that the provisions of the Federal Constitution as to grand and petit juries relate to mere methods of procedure and are not fundamental in their nature. In my opinion, guaranties, for the protection of life, liberty, and property, as embodied in the Constitution, are for the benefit of all, of whatever race or nativity, in the States composing the Union, or in any territory, however acquired, over the inhabitants of which the Government of the United States may exercise the powers conferred upon it by the Constitution.

The Constitution declares that no person, except in the land or naval forces, shall be held to answer for a capital or otherwise infamous crime, except on the presentment or indictment of a grand jury, and forbids the conviction, in a criminal prosecution, of any person, for any crime, except on the unanimous verdict of a petit jury composed of twelve persons. Necessarily, that mandate was addressed to every one committing crime punishable by the United States. This court, however, holds that these provisions are not fundamental and may be disregarded in any territory acquired in the manner the Philippine Islands were acquired, although, as heretofore decided by this court, they could not be disregarded in what are commonly called the organized territories of the United States. (*Thompson v. Utah*, 170 U. S. 343.) I can not assent to this interpretation of the Constitution.

The merits of the case were also passed upon, and the court held that the publications complained of, which consisted of mere headlines, was libelous.

In November, 1902, disbarment proceedings were instituted against two members of the Manila bar, Augustus A. Montague and Frank E. Dominguez, who constituted the firm of Montague & Dominguez. The petition was based upon eleven charges. The attorney-general assisted the supreme court in making the investigation in compliance with the provisions of the Code of Civil Procedure. The essence of the charges was that respondents entered into contracts of employment with their clients and collected fees from them, and abandoned their cases without rendering a quid pro quo. The investigation covered a period of nearly one year. Respondents were ably represented by a number of Manila lawyers. After a full hearing the supreme court of the islands dismissed seven charges and based its findings on the remaining four. By a unanimous decision of the court the respondents were suspended from the practice of their profession as lawyers in the islands for a term of one year.

Very respectfully,

L. R. WILFLEY,
Attorney-General.

The SECRETARY OF FINANCE AND JUSTICE,
Manila, P. I.

EXHIBIT A.

OFFICE OF THE CLERK,
SUPREME COURT OF THE PHILIPPINES,
Manila, P. I., October 21, 1904.

The ATTORNEY-GENERAL OF THE PHILIPPINE ISLANDS,
Manila, P. I.

SIR: In compliance with section 77 of Act 136, I have the honor to submit the following report concerning the business done in this court during the year ending September 1, 1904:

Number of cases pending September 1, 1903:	
Civil.....	103
Criminal.....	236
Number of cases filed during year ending September 1, 1904:	
Civil.....	189
Criminal.....	486
Number of cases decided during said year in which opinions have been filed:	
Civil.....	57
Criminal.....	176
Number of cases otherwise disposed of:	
Civil.....	19
Criminal.....	30
Number of cases pending September 1, 1904:	
Civil.....	216
Criminal.....	516
Changes among supreme court judges, resignations.....	2
Number of applicants for admission to the bar:	
Americans.....	34
Filipinos.....	113
Number who passed the bar examination:	
Americans.....	24
Filipinos.....	62
Number of cases "ready for argument" on September 1, 1904:	
Civil.....	35
Criminal.....	180
Fees received during said year:	
Local currency.....	\$1,266.76
Philippine currency.....	P7,792.44

The library contains nearly 5,000 books, about 1,700 of which were added this year. The space at present available is insufficient. The two contiguous rooms now temporarily occupied by the old records of this court could be devoted to the library; this would furnish ample room for the books recently received and those yet to come and for which requisition has been made. As to the old records in question, the court never refers to them, and we are very seldom called upon to issue copies thereof. Arrangements are now being made for the removal of these records to the "Postigo Jail," back of the audiencia building.

The taxation of costs in criminal cases, under the present system, involves a considerable amount of unnecessary work. We are governed in this respect, under a ruling of the acting attorney-general, by the old Spanish tariff, which is rather complex and anything but practical. On January 1, 1904, there were nearly 300 criminal cases tried by this court in which no costs had ever been taxed. Two of the clerks of this office have been at work on the taxation of these costs since the court adjourned, on April 25, and there is still a large number of cases undisposed of. The taxation of costs as made by the clerk is referred to the attorney-general for his examination and report, and then submitted to the court for its approval. The government is in most every instance the only one interested. In none of these cases have attorneys filed their bills of costs. Defendants in most of the criminal cases appealed to this court are represented by attorneys "de oficio," appointed to defend them upon either proof or presumption of their inability to employ a lawyer.

It is believed that if the provisions of section 1 of Act 302 were made to apply to the clerk of the supreme court, thereby fixing a uniform fee in all cases, the work would be greatly simplified without prejudice to the parties concerned. The clerk's fees under the tariff in question average about what is now charged in civil cases under Act 150.

The opinions of the supreme court.—Under section 37, Act 136, the opinions of this court once recorded in the "Opinion Book" are delivered to the reporter, to be retained by him as a part of the files of his office.

It is believed, following the rule of the Supreme Court of the United States, that the original opinions of this court should be preserved and kept by the clerk and copies thereof furnished the reporter immediately after they are recorded. And it is accordingly suggested that the repeal of the said section be recommended and the following substituted:

"SEC. —. All opinions delivered by the supreme court shall, immediately upon the delivery thereof, be handed to the clerk to be recorded. And it shall be the duty of the clerk to cause the same to be forthwith recorded, and to deliver a copy to the reporter as soon as the same shall have been recorded.

"The original opinions of the court shall be filed with the clerk for his preservation."

Nowhere can the opinions of the court be more secure than in the clerk's office. Although an officer of the court, the reporter may have his office where it will best suit his convenience.

It is also believed that the "Opinion Book" could be safely dispensed with, in which case the proposed section could be changed to read as follows:

"SEC. —. All opinions delivered by the supreme court shall, immediately upon the delivery thereof, be filed with the clerk for his preservation. And it shall be the duty of the clerk to deliver a copy to the reporter as soon as the same shall have been so filed.

"The clerk shall reasonably cause the original opinions delivered by the court to be conveniently indexed and bound."

This would obviate the necessity of devoting one "escribiente" exclusively to the keeping of this book and the consequent delay in delivering original opinions to the reporter, and the system would be more satisfactory in every respect.

Bills of exceptions.—With the promulgation of Act 1123 the expense of printing bills of exceptions has been considerably diminished. The act has fully accomplished its object. However, if the clerk were authorized to call for bids and have the work done under contract, expenses could be still further reduced. The printing is now done by three different plants in this city at various rates. Our books show that about ₱4,000 have been paid out by this office during the six months ending June 30, 1904, for the printing of bills of exceptions.

Bond.—Section 21 of Act 136 provides that before entering upon the performance of his duties the clerk of this court shall execute a bond to the government of the Philippine Islands in the penal sum of ₱10,000, etc. The amount appears to be excessive. The government pays two-thirds of the premium. It is believed that it could be safely reduced to six thousand at least.

No recommendation is made in this report concerning other important changes, such as amendments to the rules, etc., the same being entirely within the jurisdiction of this court.

Very respectfully,

J. E. SHAW,

Clerk of the Supreme Court of the Philippine Islands.

cases the appellants had been acquitted by the trial court and convicted in the supreme court of the islands. The appeal was taken to the Supreme Court of the United States on the ground that the decision of the supreme court of the islands was in violation of the provisions of the act of Congress above quoted. The government's position in this litigation was that the Supreme Court of the United States in interpreting the provision of the act of Congress in question should invoke the following canon of construction: It must be presumed that Congress, in passing the Philippine government act, was familiar with the local laws in the Philippine Islands and the judicial interpretation they had received at the hands of the supreme court of the islands, and that it legislated with special reference thereto. Under the Spanish law jeopardy did not end until after the supreme court had heard and passed upon the case. Hearing by the court of first instance and the supreme court were parts of one single and continuous trial. Mr. Justice Brown, in his dissenting opinion, made the following clear and vigorous statement of the Government's position in this case:

I think that in applying the principle to the Philippine Islands, Congress intended to use the words in the sense in which they had theretofore been understood in those islands. By that law, in which trial by jury was unknown, the jeopardy did not terminate if appeal were taken to the audiencia or supreme court until that body had acted upon the case. The proceedings before the court of first instance were in all important cases reviewable by the supreme court upon appeal, which finally acted upon the case and terminated the jeopardy. This was evidently the view of the military commander in General Orders, No. 58, and of the Philippine Commission in the act of August 10, 1901 (No. 194), in both of which an appeal to the supreme court was contemplated, even after a judgment of acquittal. * * * It seems to me impossible to suppose that Congress intended to place in the hands of a single judge the great and dangerous power of finally acquitting the most notorious criminals.

On the other hand, it was contended by the appellants that the statute should receive the same interpretation in this instance that similar statutes had always received from English and American judiciaries. Mr. Justice Day, who wrote the opinion of the court, stated the proposition in the following language:

In order to determine what Congress meant in the language used in the act under consideration, "No person for the same offense shall be twice put in jeopardy of punishment," we must look to the origin and source of the expression and the judicial construction put upon it before the enactment in question was passed. A consideration of the events preceding this regulation makes evident the intention of Congress to carry some at least of the essential principles of American constitutional jurisprudence to these islands and to engraft them upon the law of this people, newly subject to our jurisprudence.

The question whether Congress had the right to extend or to withhold from the Philippine Islands the right of trial by jury was determined by the Supreme Court of the United States in the case of *Edward F. O'Brien and Fred L. Dorr v. The United States*; or to state the proposition in a different way, did the right of trial by jury exist in the Philippine Islands after the date of the ratification of the treaty of Paris, irrespective of the act of Congress, or was it necessary for Congress to give the right by a special act? The foregoing gentlemen were the editor and proprietor of the *Manila Freedom*, a newspaper published and circulated in Manila. They were arrested on the charge of criminal libel. Their motion for a jury trial was denied by the trial court and the supreme court of these islands. An appeal was thereupon taken to the Supreme Court of the United States. Under the Spanish law in the Philippine Islands trials were conducted

by judges. Trial by jury was unknown. The law on the subject in the Philippine Islands has never been changed. The case was decided adversely to the contention of the plaintiffs in error by a vote of eight to one—Mr. Justice Harlan alone dissenting. This decision laid down the rule of constitutional interpretation with reference to our insular possessions, and in a large measure fixed the legal status of the Philippine Islands. Mr. Justice Day, in delivering the opinion of the court, used the following language:

If the right to trial by jury were a fundamental right which goes wherever the jurisdiction of the United States extends, or of Congress, in framing laws for outlying territory belonging to the United States was obliged to establish that system by affirmative legislation, it would follow that, no matter what the needs or capacities of the people, trial by jury, and in no other way, must be forthwith established, although the result may be to work injustice and provoke disturbance rather than to aid the orderly administration of justice. If the United States, impelled by its duty or advantages, shall acquire territory peopled by savages, and of which it may dispose or not hold for ultimate admission to statehood, if this doctrine is sound, it must establish there the trial by jury. To state such a proposition demonstrates the impossibility of carrying it into practice. Again, if the United States shall acquire by treaty the cession of territory having an established system of jurisprudence, where jury trials are unknown, but a method of fair and orderly trial prevails under an acceptable and long-established code, the preference of the people must be disregarded, their established customs ignored, and they themselves coerced to accept, in advance of incorporation into the United States, a system of trial unknown to them and unsuited to their needs. We do not think it was intended in giving power to Congress to make regulations for the territories, to hamper its exercise with this condition.

It will be observed that in its last analysis the proposition here laid down is that while there are some fundamental restrictions and prohibitions contained in the Constitution which are universal in their application and which can not be transcended by Congress at any time or place or under any circumstances, yet there are other restrictions which are not fundamental in their nature, such as those which relate to methods of procedure and forms of trial which do not necessarily restrict Congress in legislating for the unorganized territories of the United States. It is held in this case that the right of trial by jury is not a fundamental right and that Congress in legislating for the islands may withhold it if it sees proper. As stated before, Mr. Justice Harlan alone combatted the foregoing proposition. For a long period of years he has held a different view from that expressed in the opinion of Mr. Justice Day, and in the course of his dissenting opinion he stated his position in the following language:

I do not believe now any more than I did when *Hawaii v. Mankichi* (190 U. S., 197) was decided, that the provisions of the Federal Constitution as to grand and petit juries relate to mere methods of procedure and are not fundamental in their nature. In my opinion, guaranties, for the protection of life, liberty, and property, as embodied in the Constitution, are for the benefit of all, of whatever race or nativity, in the States composing the Union, or in any territory, however acquired, over the inhabitants of which the Government of the United States may exercise the powers conferred upon it by the Constitution.

The Constitution declares that no person, except in the land or naval forces, shall be held to answer for a capital or otherwise infamous crime, except on the presentment or indictment of a grand jury, and forbids the conviction, in a criminal prosecution, of any person, for any crime, except on the unanimous verdict of a petit jury composed of twelve persons. Necessarily, that mandate was addressed to every one committing crime punishable by the United States. This court, however, holds that these provisions are not fundamental and may be disregarded in any territory acquired in the manner the Philippine Islands were acquired, although, as heretofore decided by this court, they could not be disregarded in what are commonly called the organized territories of the United States. (*Thompson v. Utah*, 170 U., S. 343.) I can not assent to this interpretation of the Constitution.

The merits of the case were also passed upon, and the court held that the publications complained of, which consisted of mere headlines, was libelous.

In November, 1902, disbarment proceedings were instituted against two members of the Manila bar, Augustus A. Montague and Frank E. Dominguez, who constituted the firm of Montague & Dominguez. The petition was based upon eleven charges. The attorney-general assisted the supreme court in making the investigation in compliance with the provisions of the Code of Civil Procedure. The essence of the charges was that respondents entered into contracts of employment with their clients and collected fees from them, and abandoned their cases without rendering a quid pro quo. The investigation covered a period of nearly one year. Respondents were ably represented by a number of Manila lawyers. After a full hearing the supreme court of the islands dismissed seven charges and based its findings on the remaining four. By a unanimous decision of the court the respondents were suspended from the practice of their profession as lawyers in the islands for a term of one year.

Very respectfully,

L. R. WILFLEY,
Attorney-General.

The SECRETARY OF FINANCE AND JUSTICE,

Americans.....	34
Filipinos.....	113
Number who passed the bar examination:	
Americans.....	24
Filipinos.....	62
Number of cases "ready for argument" on September 1, 1904:	
Civil.....	35
Criminal.....	180
Fees received during said year:	
Local currency.....	\$1,266.76
Philippine currency.....	17,792.44

The library contains nearly 5,000 books, about 1,700 of which were added this year. The space at present available is insufficient. The two contiguous rooms now temporarily occupied by the old records of this court could be devoted to the library; this would furnish ample room for the books recently received and those yet to come and for which requisition has been made. As to the old records in question, the court never refers to them, and we are very seldom called upon to issue copies thereof. Arrangements are now being made for the removal of these records to the "Postigo Jail," back of the audiencia building.

The taxation of costs in criminal cases, under the present system, involves a considerable amount of unnecessary work. We are governed in this respect, under a ruling of the acting attorney-general, by the old Spanish tariff, which is rather complex and anything but practical. On January 1, 1904, there were nearly 300 criminal cases tried by this court in which no costs had ever been taxed. Two of the clerks of this office have been at work on the taxation of these costs since the court adjourned, on April 25, and there is still a large number of cases undisposed of. The taxation of costs as made by the clerk is referred to the attorney-general for his examination and report, and then submitted to the court for its approval. The government is in most every instance the only one interested. In none of these cases have attorneys filed their bills of costs. Defendants in most of the criminal cases appealed to this court are represented by attorneys "de officio," appointed to defend them upon either proof or presumption of their inability to employ a lawyer.

It is believed that if the provisions of section 1 of Act 302 were made to apply to the clerk of the supreme court, thereby fixing a uniform fee in all cases, the work would be greatly simplified without prejudice to the parties concerned. The clerk's fees under the tariff in question average about what is now charged in civil cases under Act 150.

The opinions of the supreme court.—Under section 37, Act 136, the opinions of this court once recorded in the "Opinion Book" are delivered to the reporter, to be retained by him as a part of the files of his office.

It is believed, following the rule of the Supreme Court of the United States, that the original opinions of this court should be preserved and kept by the clerk and copies thereof furnished the reporter immediately after they are recorded. And it is accordingly suggested that the repeal of the said section be recommended and the following substituted:

"SEC. —. All opinions delivered by the supreme court shall, immediately upon the delivery thereof, be handed to the clerk to be recorded. And it shall be the duty of the clerk to cause the same to be forthwith recorded, and to deliver a copy to the reporter as soon as the same shall have been recorded.

"The original opinions of the court shall be filed with the clerk for his preservation."

Nowhere can the opinions of the court be more secure than in the clerk's office. Although an officer of the court, the reporter may have his office where it will best suit his convenience.

It is also believed that the "Opinion Book" could be safely dispensed with, in which case the proposed section could be changed to read as follows:

"SEC. —. All opinions delivered by the supreme court shall, immediately upon the delivery thereof, be filed with the clerk for his preservation. And it shall be the duty of the clerk to deliver a copy to the reporter as soon as the same shall have been so filed.

"The clerk shall sensibly cause the original opinions delivered by the court to be conveniently indexed and bound."

This would obviate the necessity of devoting one "escribiente" exclusively to the keeping of this book and the consequent delay in delivering original opinions to the reporter, and the system would be more satisfactory in every respect.

Bills of exceptions.—With the promulgation of Act 1123 the expense of printing bills of exceptions has been considerably diminished. The act has fully accomplished its object. However, if the clerk were authorized to call for bids and have the work done under contract, expenses could be still further reduced. The printing is now done by three different plants in this city at various rates. Our books show that about ₱4,000 have been paid out by this office during the six months ending June 30, 1904, for the printing of bills of exceptions.

Bond.—Section 21 of Act 136 provides that before entering upon the performance of his duties the clerk of this court shall execute a bond to the government of the Philippine Islands in the penal sum of ₱10,000, etc. The amount appears to be excessive. The government pays two-thirds of the premium. It is believed that it could be safely reduced to six thousand at least.

No recommendation is made in this report concerning other important changes, such as amendments to the rules, etc., the same being entirely within the jurisdiction of this court.

Very respectfully,

J. E. SHAW,

Clerk of the Supreme Court of the Philippine Islands.

EXHIBIT B.

MANILA, September 26, 1904.

Hon. L. R. WILFLEY,

Attorney-General of the Philippine Islands, Manila.

SIR: In compliance with the provisions of Act 136, I have the honor to submit the following report:

CIVIL BRANCH.

Number of civil cases on file September 1, 1903.....	442
Number of civil cases filed during the year beginning September 1, 1903, and ending September 1, 1904.....	850
Number of civil cases decided during the year beginning September 1, 1903, and ending September 1, 1904.....	287
Number of civil cases dismissed on motion of plaintiff during the year beginning September 1, 1903, to September 1, 1904.....	49
Number of civil cases on docket September 1, 1904.....	956
Increase over September 1, 1903.....	514

CRIMINAL BRANCH.

Number of criminal cases on file September 1, 1903.....	82
Number of criminal cases filed during the year beginning September 1, 1903, and ending September 1, 1904.....	649
Number of criminal cases decided during the year beginning September 1, 1903, and ending September 1, 1904.....	498
Number of criminal cases dismissed on motion of the prosecuting attorney during the year beginning September 1, 1903, to September 1, 1904.....	75
Number of criminal cases on docket September 1, 1904.....	731
Increase over September 1, 1903.....	158

PROBATE DIVISION.

Number of probate cases on file September 1, 1904.....	337
Number of probate cases filed during the year beginning September 1, 1903, and ending September 1, 1904.....	210
Number of probate cases disposed of during the year beginning September 1, 1903, and ending September 1, 1904.....	88
Number of probate cases pending September 1, 1904.....	459

Revenue.

	Pfs.	Pesos.
Civil cases:		
Costs received during the year beginning Sept. 1, 1903, to Sept. 1, 1904.....	1,652.63	16,292.77
Criminal cases:		
Costs received during the year beginning Sept. 1, 1903, to Sept. 1, 1904.....	101.48	534.87
Fines and bailis forfeited:		
Fines received during the year beginning Sept. 1, 1903, to Sept. 1, 1904.....	1,485.00	2,445.76
Bailis forfeited during the year beginning Sept. 1, 1903, to Sept. 1, 1904.....	665.00	6,000.00
Total.....	3,844.11	25,273.40

An examination of the foregoing statement showing the business transacted by this court during the year 1903-4, as compared with those of the preceding years, shows an increase in civil as well as in criminal litigation of nearly 100 per cent. The nature of civil cases filed during the period covered by this report were, to a great extent, suits on promissory notes, foreclosures of mortgages, and cases arising out of misinterpretation of contracts. Ex delicto cases are almost unknown.

The numerous prosecutions brought during the years 1903 and 1904 under the treason and sedition acts were the cause of swelling up the number of criminal cases.

In handling criminal cases after appeal is where the machinery of the court is absolutely unable to comply with the law. In these cases the defendant, if convicted, may appeal within fifteen days after the judgment is rendered, and the record of the proceedings must be sent up to the supreme court for review within five days after appeal is taken. This law which was designed for a different time has become obsolete in our practice. At the time that this law was enacted no stenographers were employed in the courts of the Philippine Islands, the testimony was all taken down in longhand and signed by the witness, and consequently the record was complete as soon as judgment was rendered.

I would not have mentioned this point if it was not for the fact that a similar provision is incorporated in the new Code of Criminal Procedure. There are to my mind two remedies to this, one is to increase the force of stenographers to such an extent that a quick transcript of the notes can be secured, the other is to change the procedure in appeals in criminal cases by enacting a similar procedure to that followed in civil actions; that is to say, that a bill of exceptions and assignments of error be required of the appellant. This provision will have the effect of limiting the number of frivolous appeals in criminal cases.

There is another question where this court has for a long time found a great deal of difficulty, and that is in obtaining proper interpretation in important cases, both civil and criminal, owing to the fact that the appropriation for interpreters is entirely inadequate for good service, hence the impossibility of obtaining suitable interpreters and translators that might otherwise be had. This has been a constant source of annoyance and embarrassment alike to the judges, the prosecuting attorneys, the counsel for the defense, and attorneys in civil cases, and a serious detriment to justice. Frequently the various judges have had to call upon interpreters not connected with the court in order to obtain safe and proper interpretation. The parties are entitled to good and correct interpretation, and the present personnel, with one exception, is entirely inadequate. The service of incompetent interpreters delays substantially the trial of causes and all court proceedings, thus consuming unnecessary time in each trial, and it results that the whole machinery of the court is hindered and delayed, which amounts to extravagance.

It is suggested that the salaries of interpreters and translators be not less than ₱3,200 nor more than ₱3,600. With this salary and a proper selection of persons to fill the vacancies, the service could be brought up to a safe practice and the desired necessary standard of efficiency.

After the commencement of the October term this court will inaugurate a new system by assigning all probate cases to one judge. This will be a great improvement in proceedings of this kind. Hitherto probate cases had been somewhat neglected, due partly to the continual shifting of the records of the cases from one judge to another, and to a great extent to the impossibility of the clerk, with his present force, of examining the accounts of administrators, guardians, and executors, and in keeping them within limit as to the date on which they should file their reports and accounts. The deficiency as to the clerk's office force still exists and it is urged that this be remedied by appointing an additional assistant who could be assigned exclusively to this work.

The revenue collected of the court has been increasing to an enormous extent from year to year, as can be detected by comparing the receipts of previous years. There is an increase in the receipts in the financial year ending August 31, 1904, of 60 per cent, as compared to that of the previous year.

The foregoing recommendations were made after careful consultation with each member of the bench of the court of first instance of Manila and the prosecuting attorney, all of whom concur in this report.

Respectfully submitted,

J. McMICKING,
Clerk of the Court.

EXHIBIT C.

MANILA, P. I., September 23, 1904.

Hon. L. R. WILFLEY,
Attorney-General, Manila, P. I.

Sir: In reply to your communication of September 21, requesting certain data for the period September 1, 1903, to August 31, 1904, I have the honor to submit the following:

Number of cases on file September 1, 1903.....	144
Number of cases filed during year, September 1, 1903, to August 31, 1904..	833
Number of cases decided during year.....	221
Number of cases otherwise disposed of during year.....	15
Number of cases on docket September 1, 1904.....	977
Of which there are still pending.....	678
Amount of costs received during year:	
Philippines currency.....	₱28,607.74½
Mexican and Spanish-Philippines currency.....	Pfs. 761.17

Very respectfully,

J. R. WILSON, *Clerk of the Court.*

EXHIBIT D.

MANILA, September 29, 1904.

SIR: In compliance with your request, I have the honor to report that the court of customs appeals has been open at all times during the year commencing September 1, 1903, and ending August 31, 1904.

On September 2, 1903, the court was reconstructed by Act 864 of the Philippine Commission, and the president of the court, the honorable secretary of finance and justice, and the chief justice of the supreme court, who had been detailed as a member of this court, retired from the court.

A. S. Crossfield, formerly a member of this court, and Felix M. Roxas, formerly a judge of the court of first instance, were appointed and qualified as judges of the court newly constituted, and have been continuously on duty since.

Judge Crossfield has been detailed on duty as judge of the court of first instance in the city of Manila from September 1 to October 9, 1903; in the province of Rizal from October 9 to November 13, 1903; in the province of Cavite from February 15 to April 4, 1904, and again in the city of Manila from May 2 to the close of the said year, except for a short session of the court of first instance in Romblon, which he held during the month of August.

During his service as judge of the court of first instance in Manila during the year 1903 Judge Crossfield also held sessions and attended to the business of this court as necessity required, and while in such service during the present year has held daily five-hour sessions of the court of first instance in the forenoon and sessions of this court at 3 o'clock in the afternoon.

Judge Roxas has been detailed as judge of the court of first instance in the province of Bulacan from October 8, 1903, to November 27, 1903. From December 1, 1903, to February 12, 1904, he held sessions of the court of first instance both at Malolos, Bulacan, and at Pasig, Rizal, journeying from one town to the other as occasion demanded, and from July 6 to August 27 held court of first instance at Nueva Caceres, Ambos Camarines.

Cases on file at beginning of the year.....	17
Cases filed during the year.....	184

Total.....	201
------------	-----

Cases disposed of.....	159
------------------------	-----

As follows:

By judge of the court.....	152
By dismissal before trial, on motion of the attorney-general.....	6
Id., on motion of the appellant.....	1
Cases pending before the court.....	42

Total.....	201
------------	-----

In nine cases in which judgment has been entered two separate and distinct appeals were made, requiring two distinct judgments, making judgments in all entered, 168, divided as follows:

On constitutional authority to levy duty—

On imports.....	11
On exports.....	10
On wharfage and harbor dues.....	10
On classification.....	54
On surtaxes, fines, etc.....	21
In special proceedings.....	8
Criminal cases.....	20
Confiscation proceedings.....	7
Appeals from imposition of duties on merchandise imported under concessions and government contracts.....	14
Immigration cases.....	13

168

Of the cases pending before the court on August 31, 24 were filed during the last days of the month and hearing had not been held at the end of the month, 10 are in suspense at the request of the appellants, and 8 are pending decision of the court.

Very respectfully submitted.

J. M. BROWNE, *Clerk of the Court.*

EXHIBIT E.

MANILA, September 15, 1904.

SIR: I have the honor to submit the following report of the work performed by my office from the 1st day of September, 1903, to the 31st day of August, 1904:

On the 1st day of September, 1903, I completed an investigation made by the order of the honorable the civil governor concerning alleged sufferings and deaths among certain laborers sent from Manila during the month of July, 1903, to work on the Benguet road. This investigation had occupied about a month's time, involving visits to the towns of Calamba, Cabuyao, and Los Baños, in La Laguna Province; Tarlac and Panique, in Tarlac Province; Dagupan, Lingayen, Pozorrubio, and Alava, in Pangasinan Province, and Twin Peaks, in Benguet Province. Report of this investigation is on file in the executive bureau, dated September 1, 1903.

On the 15th day of September, 1903, by order of Governor Taft, I left Manila for the province of Albay, where I arrived September 19. At this time the ladrone movement which had been going on in Albay Province for a considerable time was being brought to a close by Colonel Bandholtz, Philippines constabulary, and a session of the court of first instance was about to be held to try the cases growing out of these disorders. After spending about a fortnight in Albay Province, assisting Colonel Bandholtz in the investigation of a number of these cases and in preparing for the term of court which was about to open, I went to Nueva Caceres and there conducted an investigation of a claim by Antonio Guevara against the insular government for 6,000 pesos, seized by Gen. J. M. Bell as insurgent funds, at Magarao, Ambos Camarines, in the month of March, 1900. Report of this investigation has not yet been submitted, owing to repeated requests for delay on the part of the attorney for the claimant, Mr. William Tutherly, of Manila.

I returned to Albay Province on the 29th day of October. The Hon. Adam C. Carson, judge of the eighth district, arrived on the 31st day of October and opened court. About a month later the Hon. James H. Blount, jr., came to Albay to hold a special term in connection with that held by Judge Carson. With the assistance of the provincial fiscal of Albay and his deputy, the provincial fiscal of Ambos Camarines, and Mr. Marshall Dawson, of the attorney-general's office, I continued prosecuting cases for brigandage, insurrection, murder, etc., until the end of the month of December.

Upon our return to Manila after the termination of the session of court in Albay Province, Judges Carson, Blount, and myself joined in a report to the honorable the civil governor concerning the work accomplished at the said session, in which report certain recommendations were made as to the reduction of some of the sentences imposed. This report contains a complete list of the most important cases disposed of at the term of court above referred to. It is on file in the executive bureau, dated January 11, 1904.

I returned to Manila from Albay on the 6th day of January, 1904, and on the 12th day of January, by order of the Hon. Luke E. Wright, civil governor, I proceeded to the Cagayan Valley (Cagayan and Isabela provinces) to investigate conditions there, particularly with reference to a serious ladrone and so-called "revolutionary" movement going on in the province of Isabela at that time. The scope of this investigation, as per instructions of the honorable the civil governor, included a full inquiry into the cause of the disturbances in question; the condition of the provincial and municipal governments; investigation of the conduct of provincial and constabulary officials; troubles between the Tabacalera Company and native residents of Isabela Province, and recommendations, if deemed necessary, as to temporary change of form of government of Isabela Province. While in Isabela Province I submitted frequent telegraphic reports to the civil governor advising him of the progress of events and making recommendations concerning the matters which I was ordered to investigate and report upon.

On the 10th of February I met the Hon. Albert E. McCabe, judge of the court of first instance at Tuguegarao, and returned with him to Ilagan, Isabela, where a special term of court was held, beginning on the 12th day of February, for the trial of criminal cases growing out of the disturbances in Isabela Province. A large number of important cases were disposed of at this session. Upon my return to Manila I submitted to the civil governor a full report of all my work on this tour, said report being now on file in the executive bureau, dated March 14, 1904.

Immediately upon my return from the Cagayan Valley I was directed by the honorable the civil governor to visit the provinces of Ambos Camarines and Albay for the purpose of conducting the following investigations:

(1) Contest over the election of provincial governor in Ambos Camarines, held in February, 1904.

(2) Investigation and immediate report on application for pardon or commutation of sentence in case of one Francisco Reantazo, then under death sentence in Alay Province for "robbery in a band, with homicide." In the latter case I submitted report by telegraph, and in the former case prepared and mailed, on April 1, 1904, from Sorsogon, full report

and recommendations. Before leaving Albay Province I received instructions by telegraph from the executive secretary to proceed at once to Sorsogon Province to confer with the treasury examiners in relation to the prosecution of certain provincial officials. In compliance with that order, I proceeded without delay to Sorsogon, arriving there on the 29th day of March. I remained in Sorsogon until April 21, during which time I prosecuted before the Hon. Grant T. Trent, judge of the court of first instance, cases against Paul B. Weiss and Patrick Daly, deputy treasurers (Americans), and five Filipino deputies, for falsification of public documents and misappropriation of public funds, a conviction or plea of guilty resulting in every case, and Weiss having been sentenced in one case for falsification of official document to imprisonment for twelve years and one day, and for misappropriation of public funds, to ten years. Daly was sentenced to twelve years and one day for falsification. The Filipino deputies all pleading guilty to misappropriation of small amounts of public funds, were sentenced to correspondingly small terms of imprisonment in the provincial jail and in Bilibid Prison.

I arrived in Manila from Sorsogon on the 23d day of April, 1904, and on the 4th day of May left for Cebu, by order of the honorable the civil governor, to investigate certain complaints made by the Right Rev. Thomas Hendrick, bishop of Cebu. During this trip I visited, in addition to a number of towns in the province of Cebu, the towns of Tagbalaran and Jagna in Bohol Province, and completed the investigations directed by the civil governor, submitting report of same under date of June 7.

On this tour, pursuant to telegraphic instructions received at Cebu, I also visited Dumaguete, Oriental Negros, and investigated certain charges against Mr. W. C. Johnston, acting provincial treasurer, submitting report of same upon my return to Manila, under date of June 11, 1904.

I returned to Manila June 6, and on June 15, by order of the acting attorney-general, visited the province of Tayabas for the purpose of investigating charges preferred against the provincial fiscal. Report of this investigation was made to the acting attorney-general under date of June 30, 1904. While in Tayabas, pursuant to telegraphic instructions received from the acting executive secretary, I proceeded to the town of Atimonan, on the east coast of Tayabas, and conducted an investigation concerning a large shortage of rice reported by the provincial supervisor. Report of this investigation was made by telegraph under date of June 27. (See also communication to acting executive secretary dated at Manila July 1.)

On completion of this tour of duty I returned to Manila on the 29th day of June, and on the 9th day of July left Manila for Iloilo. The occasion for my visiting Iloilo was the following telegram:

"Ross, *Supervisor of Fiscals*,

"Care Attorney-General, Palace, Manila:

"Have opened court here, and find that service of supervisor of fiscals are needed. There appears to be no system either in the fiscal's office or that of the sheriff. Believe you could accomplish much good if you came down here and investigated things. You told me when I left Manila you expected to come here. Can you come soon? Things are in bad shape here, and away behind.

"McCabe, *Judge*."

and verbal instructions from the honorable the civil governor and the acting attorney-general. My work in Iloilo consisted of the investigation of charges against the provincial fiscal, Andrew V. Smith, and the deputy sheriff, one Sullivan: the conduct of the sheriff's office, and assisting the acting provincial fiscal, Mr. Ruperto Montinola, in the preparation and trial of a large docket of criminal cases. When about to leave Iloilo I received telegraphic instructions from the acting executive secretary to await the arrival of papers in the case of A. R. Stuart, ex-deputy collector of customs of the port of Iloilo, who had been arrested in the United States and was being returned to Iloilo for trial. The trial of this case was commenced on the 16th day of August and ended on the 14th day of September. The decision of the court was rendered on the 19th day of September, finding the defendant, Stuart, guilty of the crime of falsification of an official document, and sentencing him to twelve years and one day imprisonment.

COMMENT AND RECOMMENDATIONS.

During the year covered by this report I have had occasion to visit the capitals of the following provinces: Albay, Ambos Camarines, Antique, Bohol, Bulacan, Cagayan, Capiz, Cebu, Iloilo, Isabela, La Laguna, Masbate, Occidental Negros, Oriental Negros, Pangasinan, Rizal, Romblon, Sorsogon, Tarlac, and Tayabas. Most of these visits have been made under special orders of the honorable the civil governor and the attorney-general, but, in addition to the work assigned to me by special orders, I have inspected the offices

and observed the work of the provincial fiscals in the provinces named. I have found these officials, as a rule, performing their duties in a reasonably satisfactory manner, and in some cases with a high degree of efficiency. The greatest fault I have observed in the work of the fiscals is that they consume too much of the time of the courts in presenting cases which should never have been brought to trial, and in which a careful investigation would have shown that an acquittal must result. They also, I find, file a large number of informations without a sufficient preliminary investigation, which, when the cases come to trial, they are obliged to dismiss. As a rule, they are not as careful and painstaking as they should be in preparing their cases for trial and, as a result, are frequently surprised by the testimony of their witnesses, and lose cases where convictions should be secured—and could be by careful study and preparation before going to trial. I have endeavored by counsel, advice, and example, where I have had an opportunity to take an active part in trials, to correct these faults, and I think I may say that I have met with a fair degree of success.

The practices with which I here have occasion to find fault are due to several causes, the principal ones being (1) lack of perfect understanding of the new criminal procedure; (2) in some cases failure to exercise the highest degree of diligence and industry, and (3) the ignorance and inefficiency of a great many justices of the peace, who hold preliminary investigations and forward to the provincial fiscals voluminous reports in a great many cases where there is no legal foundation for criminal complaints, or where the evidence is insufficient, when presented to the court of first instance, to warrant convictions. It must be said, however, that, notwithstanding the ignorance and inefficiency of the justices of the peace in these matters, the fiscals could, by exercising a greater degree of diligence in examining the records sent up to them, and by conducting investigations on their own account, save a great deal of the time of the courts and avoid the loss of prestige in the public mind on account of such a large list of dismissals and acquittals as frequently results from sessions of the courts of first instance in the various provinces.

The fiscals are handicapped in the work of preparing cases for trial by the difficulty which is encountered in the matter of securing the prompt attendance of witnesses before the opening of the courts, or even during the sessions. This difficulty, in my opinion, is largely due to the lack of statutory provision for the payment of the expenses of travel and subsistence incurred by witnesses attending the courts. During the year I have attended a good many sessions of court, and this difficulty has always been present to deal with. It is not due to any disrespect for the courts on the part of the people of the country. On the contrary, I have observed that in general they obey the process of the courts with an alacrity equal to, if not greater than, that manifested by the people of the United States. The trouble is that the vast majority of the people subpoenaed as witnesses are extremely poor. It frequently happens that they are required to travel long distances to reach the capital, no transportation is available, and they are obliged to come on foot from remote districts over roads which generally are not in the best condition and which in the rainy season are almost impassable; and all this without any means of defraying their traveling expenses or of maintaining themselves after their arrival at the capital. I have known of cases where people who were possessed of some small means, or who were able to borrow money, have gone to large expense in hiring transportation in order to obey subpoenas, which expense practically bankrupted them and all their friends from whom they could borrow money.

A great part of these hardships might be obviated were it possible to summon witnesses, bring them to the capital, arrange to have them present on the day—or soon thereafter—when their case is called for trial, take their testimony, and allow them to depart. But this, owing to the great distances to be traveled, the short duration of sessions, and the uncertainty as to when cases will be reached on the docket, is altogether out of the question, and if it were attempted to pursue the practice of citing witnesses as cases are reached, the court dockets would become clogged beyond all hope of keeping up with the business. I have found from actual experience that the only way to dispatch criminal business promptly and within the limited time generally allotted for a term of court, is to summon practically all the government witnesses and secure their attendance on the day of the opening of court—or preferably a few days before, in order to allow time for preparation—call the witnesses as they are required, and excuse them as rapidly as possible, holding, in the meanwhile, those required for further cases. Without some way of subsisting these witnesses, this plan works incalculable hardship upon the poor people who are brought in under process of the courts. On several occasions when I have been attending the courts in the provinces I have resorted to calling upon the contingent fund of the executive bureau to meet the expenses of the subsistence of witnesses, and requests for the use of these funds have invariably been granted. But this plan is far from satisfactory, and the provincial fiscals in very few instances find it practicable to follow it, the result being that there is a universal complaint from them and from the provincial authorities concerning the matter under discussion.

In addition to the question of providing subsistence for indigent witnesses at the provincial capital, there is the matter of their transportation and subsistence while en route from

their homes to the capital, which in a great many cases—I might say “most”—it is necessary to supply in advance or else subject the witnesses to the hardship of providing, out of their meager store, their own expenses. There are many cases in which these people are absolutely unable to do this, and they either come to the capital in a half-starving condition, or else are obliged to depend on the charity of the people en route. I do not believe that I have overdrawn my statements in regard to this matter, and from experience gained in traveling about the archipelago almost continuously during the year, I can say that the conditions above stated are practically the same in all the provinces I have visited.

I am not in favor of providing by law a uniform schedule of witness fees, nor even of paying witnesses any fees at all, but I am of the opinion that legislation should be enacted authorizing provincial boards, on the certificate of the judge and the fiscal, to provide funds to meet the actual and necessary traveling expenses and subsistence of witnesses subpoenaed before the courts of first instance. As the cost of transportation and living varies widely in different localities, it would not be practicable, in my opinion, to fix a uniform allowance for all the provinces. I believe, however, that this matter could be safely left to the provincial boards subject to the supervision of the judge and the fiscal, and under such restrictions as to the Commission might seem wise. I most earnestly recommend this subject to your consideration.

JUSTICES OF THE PEACE.

I have heretofore in this report referred to the incompetency and ignorance of many of the justices of the peace. Instead of “many,” I could have said “most,” and might even have employed a stronger term. No fault could be found with the organization of the justice-of-the-peace courts, their powers and jurisdiction as defined by the acts of the Commission, if intelligent and honest men could be found to fill the office. The objection is to the personnel as at present constituted; but in order to improve the personnel I am of the opinion that it will be necessary to modify the system. There are men of sufficient capacity and integrity, I am sure, in practically every town in the Philippine Islands to fill the position of justice of the peace, but for some reason men of this character almost invariably evade the responsibility of serving. The position of justice of the peace appears not to attract the best class of citizens, and the result is that in a deplorably large number of cases the office goes to ignorant or dishonest persons—in many instances to those who are open to both these objections. It may be said that by a system of supervision and instruction the service might be improved, but I am obliged to say that with the material at hand to work with such a result is scarcely to be hoped for. Sometimes—and only too frequently—in addition to their ignorance these justices are found to be either grossly dishonest or else under the influence of a sharp and tricky secretary or “consultor,” as he is sometimes styled, who, from his superior education and intelligence, dominates the justice of the peace, exercises a strong influence, and preys upon the wretched inhabitants of the community. With these men the motto in all too many cases is, “A public office is a public graft,” and they prey upon the poor people of the country like wild beasts.

I trust I may not be charged with drawing too lurid a picture of this evil. My endeavor is to state only the facts as they have come to my knowledge, not only during the last year, but in several years' previous experience in these islands. It is true that a close and careful supervision of these justices by the provincial authorities, including the governor and the fiscal, would result in a marked improvement; but such supervision is often impracticable and even impossible owing to the wide territorial extent of the provinces, the lack of communication, and the manifold occupations and duties of the provincial officials. And then the question arises, “Why should the government be embarrassed by having on its hands a body of men like this and expending its time and energy in supervising them, when a comparatively simple modification of the system would accomplish the desired reform?”

The remedy for the justice-of-the-peace evil, in my opinion, and which I respectfully recommend to your consideration, is as follows: Divide each province into groups of pueblos, formed into convenient districts. Appoint to these districts, after a careful scrutiny of their character and qualifications (it might even be well to make the appointment subject to examination), men of known intelligence, education, and standing in their respective communities, under salary or an allowance of fees which would enable them to give their time to the performance of their duties without serious detriment to their private interests. Make it the duty of the provincial fiscal, under the supervision of the judge of the court of first instance of the district, to make frequent inspection of and reports on these officials. By reducing the number of justices, the judges, fiscals, and provincial officials would be enabled to keep them constantly under their eye and to exercise over them that degree of supervision which is now, under the circumstances, practically impossible. I believe that a change in the justice-court system somewhat along the lines herein proposed would result not only in a great improvement in the administration of justice and save the time of the fiscals and of the courts, but it would have a good and far-reaching effect upon the people of the country, and would very materially increase their confidence in the government.

Referring again to the work of the provincial fiscals, while, as I have said, it is generally reasonably satisfactory, it is yet true that there is on hand some "dead timber" that might well be dispensed with, and there are some weak spots in the service that need strengthening. These have been, and will be, referred to in special reports to you as occasion requires. I am very glad to be able to report that the aggregate of weak and inefficient men in the department is very small, and considering the comparatively recent date of the change in the system of conducting public prosecutions and the adoption of an American code of civil procedure (General Orders, No. 58), the aptitude shown by the members of the department is highly gratifying, and I believe that with the experience which will come to them with a few years of practice we shall have a highly efficient corps of public prosecutors.

I desire to especially mention and commend the efficiency, activity, and zeal of the following provincial fiscals: Mr. Ruperto Montinola, acting fiscal of Iloilo Province during the absence of the regular incumbent; Mr. Marcial Calleja, of Albay Province, and Mr. Fulgencio Contreras, of Ambos Camarines. I also desire to gratefully acknowledge the valuable and efficient assistance rendered me during the year by Mr. Edmund Block, deputy supervisor of fiscals. Mr. Block has been away during a considerable portion of the year on leave of absence in the United States, but while on duty he has always been a faithful, willing, and untiring worker. I have not had an opportunity to personally observe his work in the courts, but the judges before whom he has practiced speak most highly of him, and all reports show that he has been very successful.

Very respectfully,

JAMES ROSS,
Supervisor of Fiscals.

The ATTORNEY-GENERAL, Manila, P. I.

EXHIBIT F.

MANILA, P. I., October 15, 1904.

SIR: Pursuant to your request I have the honor to make a brief report upon the work of this office from September 1, 1903, to September 1, 1904.

The law makes it my duty to act as legal adviser of the chief of the Philippines Constabulary, and to assist the chief and the other officers of the constabulary in the collection and preparation of evidence for criminal prosecutions, and to appear on behalf of constabulary officers in habeas corpus and other proceedings to which the chief or any other constabulary officer, as such, may be a party; and, further, to take part in any criminal trials when ordered by the civil governor or the attorney-general, and to discharge such other duties in the bureau of justice as the attorney-general may direct.

A year ago and prior thereto a good portion of my time was consumed in writing opinions and giving advice upon questions involving procedure in criminal cases and upon the construction of laws affecting the constabulary, especially the law as to constabulary discipline. I am pleased to state that this class of work is gradually falling off, and from this fact I draw the conclusion that the constabulary officers are becoming much better informed as to their duties, at least in so far as they are prescribed by law. In preparing the drafts of proposed laws affecting the constabulary I have sought to make the provisions clear and plain in their meaning and in their relation to existing laws, so that they may not be misunderstood or misconstrued.

September 1, 1903, found me in San Fernando de la Union for the purpose of prosecuting the numerous cases then pending against Dean Tompkins, provincial treasurer; Alfred E. Wood, deputy provincial treasurer; Thomas P. Coates, coast district inspector of customs, and Charles H. Osborn, constabulary supply officer. These cases consumed practically all of my time from August 6 to October 16, 1903. During that time I assisted the attorney-general in the preparation of the reply brief in the Montagne & Dominguez disbarment case before the supreme court.

The trial of the San Fernando cases resulted as follows:

Thomas P. Coates, misappropriation of public funds, guilty; sentenced to imprisonment for eight years and one day.

Charles H. Osborn, misappropriation of public funds, guilty; sentenced to imprisonment for ten years.

Alfred E. Wood, estafa, guilty; sentenced to imprisonment in the provincial jail of Union for four months.

Dean Tompkins, forgery, guilty; sentenced to imprisonment for seventeen years four months and one day.

Dean Tompkins, misappropriation of public funds, guilty; sentenced to imprisonment for nine years.

After returning to Manila from San Fernando I spent nearly all the rest of the month of October in trying bandolerismo and murder cases in Pasig, before Judge Crossfield, securing the imposition of the death penalty against Faustino Guillermo, Anatalio Austria, Leoncio Papa, and Geronimo de Leon.

The month of November, 1903, was spent in Manila in the ordinary work of the office, which had accumulated for more than two months, and in assisting the attorney-general in the oral argument before the supreme court in the Montague & Dominguez disbarment case.

Nearly all my time in the month of December was consumed in routine work in the office. About the 10th of the month I went to San Isidro, Nueva Ecija, with Colonel Scott to investigate the work of the constabulary with reference to the cases filed against one Pablo Padilla.

In January, 1904, the author and three others of the defendants charged with sedition in presenting to the public the drama entitled "Hindi Aco Patay" were prosecuted in Judge Sweeney's court in Manila. The trial lasted about two weeks, as the court was frequently interrupted by other proceedings and the attorneys for the defense fought for every delay possible. The result was a judgment of guilty against all the defendants, and Juan M. Cruz, the author, was sentenced to two years' imprisonment and \$2,000 fine, the maximum penalty, and the other three defendants in that trial were sentenced to one year's imprisonment and a fine of \$100 each. The defendants appealed to the supreme court.

In the month of February I prepared, at the request of the acting attorney-general, a brief in the case of the United States against Aurelio Tolentino, pending on appeal in the supreme court. This was the first seditious-drama case appealed to the supreme court, and the result of the appeal will have an important bearing upon the matter of seditious dramas in the future. Tolentino was convicted August 1, 1903, in the court of first instance of Manila, as the author of the Tagalog drama Yesterday, To-day, and To-morrow, which was presented to the public at the Libertad Theater in Manila on May 14, 1903.

On February 15 I left Manila for San Fernando de la Union to prosecute the case against Chauncey McGovern on the charge of having given false testimony on October 7, 1903, in favor of the defendant, Dean Tompkins, who was charged with the misappropriation of public funds. On February 26 the court rendered a judgment of guilty and fixed his punishment at imprisonment for two years, four months and one day and a fine of 3,750 pesetas. This case is now pending in the supreme court on appeal.

The result of the San Fernando cases, including the one against Chauncey McGovern for perjury, seemed to have a very salutary effect as an object lesson in the impartial administration of justice.

In March, 1904, I took my annual vacation in order to accompany my family as far as Japan on their voyage to the United States.

In April, 1904, I made a short trip to Balanga, Bataan Province, under the orders of the civil governor, to investigate a case wherein five enlisted men of the constabulary were charged in the court of first instance with administering the "water cure." During this month, in addition to routine work, I revised my brief in the Aurelio Tolentino case.

From April 28 to May 9 I was absent from my office on account of sickness, but kept the work going in the office on the translation and transcription of the Tagalog drama Pulong Pinaglahuan, which is involved in a case pending at Pasig.

In the month of May there was no work accomplished outside of the ordinary routine in the office.

From June 1 to June 23, inclusive, I was sick in the civil hospital, but my office help was working on the Tagalog drama entitled "Chain of Gold," the author of which is charged in Batangas with sedition in having presented same to the public on May 10, 1903. On June 20, while still in the hospital, the doctor said that I could take up my work there, and I took this drama and the record in the case and studied same and began the preparation of an amended complaint, as I deemed it necessary to have same filed before the opening of the July term of court with a view to getting the case set down for trial at that term. The case is still pending and is set for the 25th instant. I found the preparation of this case more tedious and difficult than any of the other drama cases on account of the peculiar nature of the drama.

In the month of July all the rest of the actors charged with sedition in the Hindi Aco Patay case were placed on trial in Manila before Judge Crossfield, and the trial resulted in a finding of guilty and a sentence of nine months' imprisonment against each of the defendants, some eight in number. No appeal was taken by any of these defendants.

In the month of August the case against Jacinto Tolentino and some twelve others for complicity with Aurelio Tolentino in presenting to the public the seditious drama Yesterday, To-day, and To-morrow, was called for trial in Judge Araullo's court in Manila, and the five defendants who had been arrested demanded separate trials, each being defended by a different lawyer. The trials of Jacinto Tolentino, Pedro Canas, and José Carvajal were completed and they were each found guilty and sentenced to four, six, and seven months' imprisonment, respectively.

In this connection I am pleased to state that the prosecutions against the authors and players of seditious dramas seem to have had the desired effect. The prosecution of these cases was placed in my special charge, and the dramatic authors were informed that everybody connected with the writing and presentation of dramas of a seditious nature

would be prosecuted. At the time the work of prosecuting these cases was commenced, seditious dramas were being presented almost every night in the week in all the native theaters in Manila and in some of the provincial towns where the spirit of insurrection was running high, and they created great interest and excitement among the ignorant native population. About a year ago some Tagalog dramatists produced a number of so-called dramas in which the burden of their complaint was against Spain and the friars. These authors sought protection against the sedition law by having Governor Dancel read their dramas and issue a certificate that he found nothing in them subversive of the United States Government, and that he recommended their presentation to the public. The authors sought to have me approve these certificates, which I declined to do upon the ground that nobody had authority to issue them or to approve them. About the time of the arrival of Artemio Ricarte in the Philippines some of these authors put their dramas upon the stage, and in their presentation they used insurrecto emblems and uniforms, and their most exciting lines were quite as applicable to the American as to the Spanish Government; they were clearly intended, in connection with the scenery and costumes, to incite the people against the existing government. The members of two or three of these theatrical companies were arrested by the constabulary during their performances. In each case the author produced Governor Dancel's so-called "authorization." Some communications passed between Señor Dancel and myself, commencing with a protest by him against the arrest of one of these companies, and the result was that Governor Dancel recalled all his "authorizations" and returned to the authors a number of dramas then in his possession for censorship, stating that he would not "censor" them. There has been no further trouble as to seditious dramas, and the excitement caused by them has apparently subsided.

In the month of August I made a short trip to Biñan, Laguna Province, at the request of the civil governor, to investigate the distribution of the free rations sent by the government for the sufferers from the Biñan fire, and at the same time, at the request of General Allen, to investigate the troubles between the municipal presidente of that town and the lieutenant of scouts stationed there.

All my spare time in the months of July and August was spent in the preparation of briefs in the Thomas P. Coates and the Charles H. Osborn cases pending on appeal in the supreme court. This work was done upon the request of the acting attorney-general.

In conclusion I desire to state that in my work in the provinces I have observed that the "bond of union" between the provincial fiscal and the officers of the constabulary is not always as strong as it should be; in fact, their misconception of their respective duties leads each to wrong conclusions as to the conduct of the other, and often brings them into open conflict. This is largely true also as between the constabulary officers and the justices of the peace. On the one hand, the constabulary officers are usually more accustomed to the military procedure in criminal matters and often do not understand the requirements of the law under a civil government; on the other hand, the fiscals and the justices of the peace, if they have any training at all, are accustomed to the Spanish methods of procedure, and it is difficult for them to become acquainted with the new way of doing things. In view of these facts and many others incidental thereto, I am of the opinion that one assistant attorney-general should have supervision of the work of the provincial fiscals and the work of advising and directing the officers of the constabulary in legal matters.

I therefore have the honor to recommend that the positions of supervisor of provincial fiscals and deputy supervisor of provincial fiscals and that of assistant attorney-general for the Philippine constabulary be abolished; that a new position of assistant attorney-general be created, and that it be provided that such official shall supervise the work of the provincial fiscals and justices of the peace and shall be the legal adviser for the chief of the Philippine constabulary and all other constabulary officers in official matters, and that he shall perform such other duties in the bureau of justice as may be required of him by the civil governor or the attorney-general; and further, that provision be made for a district attorney in each constabulary district to take immediate charge of said work with a view to the training of the provincial fiscals in the performance of their official duties and assisting local constabulary officers in legal matters, and to take special charge of important civil and criminal cases arising in their respective districts.

In my opinion this plan, when worked out in detail and put in practice, would bring about an efficient organization of the provincial fiscal system, systematize the procedure in the investigation and trial of criminal cases, expedite the work of the courts and reduce their expenses, and, generally speaking, it would result in more harmonious cooperation among those officials in the provinces upon whom depends, in a large measure, the maintenance of law and order.

Very respectfully,

GEO. R. HARVEY,
Assistant Attorney-General, Philippine Constabulary.

Hon. L. R. WILFLEY,
Attorney-General, Manila, P. I.

EXHIBIT G.

ZAMBOANGA, P. I., October 1, 1904.

SIR: In compliance with the requirements of section 9 of Act No. 787 of the Philippine Commission, I have the honor to submit a report as to the conditions of public and private litigation in the courts throughout the Moro Province for the period from September 1, 1903, the date upon which I took charge of my office, to September 1, 1904:

While the Moro Province comprises territory almost equal in extent to the island of Luzon, it has very little population. According to the late census, the civilized population is, in round numbers, but 70,000 all told. The number of non-Christian inhabitants is not known and can not be calculated with any degree of certainty, but it is now believed to have been greatly overestimated in the past. It is safe to venture the statement that the entire population of the province is not in excess of that of a single one of the more populous provinces of Luzon, such as Pangasinan.

The Christian inhabitants are grouped in small and widely separated settlements along the coast of Mindanao. The greatest number are to be found in the vicinity of the municipality of Zamboanga, while the remainder live in the vicinity of Iligan, in the district of Lanao, Dapitan, in the subdistrict of Dapitan, and in various small communities in the district of Davao. The Christian population in other parts of the province is insignificant.

For the purposes of the present report it is not necessary to consider the Moros and other non-Christian inhabitants of the province. They range in development from absolute savagery to semibarbarism, and as yet the courts have scarcely been brought in contact with them. The act organizing the province provides for a system of local courts in which these non-Christian inhabitants are to be permitted to administer their own customary laws to as great an extent as possible, but up to the present time these courts have not been organized.

Living as they do in small and widely separated groups, the Christian Filipinos are, in general, a primitive and unprogressive, but peaceful and law-abiding people. Brigandage is unknown. Few have acquired wealth, and education has never made the progress among them that it has among the inhabitants of the other provinces of the Philippine Islands.

There has been little private litigation in the courts of the province during the past year, and in no case have large property interests been involved. Indeed, in a province of this kind, which has never been developed and which remains practically uninhabited and virgin territory, it is natural that there should be few property holdings of importance. The business of the province is at present largely in the hands of Chinese, of whom there are considerable numbers at Zamboanga, Cottabato, and Jolo. The opportunities for development offered by the virgin soil of Mindanao are attracting many American settlers, who are entering into agriculture on a large scale, and it is expected that their number will be greatly increased when the public land laws of the Philippine Islands shall have been extended to the province. Unless a tide of Filipino immigration sets in, which is not probable, it seems likely that in a few years the province will contain several thriving communities of Americans, and that in the future the business and wealth of the province will be largely in the hands of Americans and Chinese. Until the province is developed by immigration of some kind private litigation will continue to be of little importance.

The number of criminal cases brought before the courts in the past year has been small, and with a few exceptions the offenses charged have been minor ones. As in other provinces the unusual and unsettled conditions incident to a change of sovereignty were productive of an epidemic of crime, and the more serious offenses which have been brought to trial in the past year were the result of such conditions. The indications are that in the future, at least in so far as the civilized inhabitants are concerned, the criminal business of the courts will not be increased.

The principal difficulty encountered by the courts in administering justice is one of transportation and distances. The population, while very small, is scattered over a vast extent of territory and is in most cases very difficult to reach. Were all the inhabitants of the province with whom the courts are brought in contact grouped in a single settlement it is believed that one competent justice of the peace, sitting continuously, and one court of first instance, in session for a period of three months each year, could easily dispose of all the business coming before the courts. As it is, the province includes the entire fourteenth judicial district and a part of the thirteenth. One judge spends his entire time and another a part of his time in traveling through the various districts of the province holding sessions of court. There are in the province seven places for holding regular sessions of the court of first instance, all of which are to be reached only by sea. The greater part of the time of the courts of first instance and of this office, which, with the writer and one assistant, attends to all criminal prosecutions before such courts, is consumed in traveling or in waiting for transportation from one place to another. Even under these conditions many of the inhabitants are practically without access to the courts of first instance. In nearly every district there are small settlements of Filipinos from 30 to 200 miles distant from the place where

regular sessions of the court for the district are held—not as the crow flies, but as it is necessary to travel in order to reach the court. In the greater part of the province roads are unknown and traveling through the interior an impossibility. Transportation from the settlements mentioned to the place of holding court is necessarily by sea, in small native crafts. In some instances the commission of crimes justifies the holding of special sessions at these distant settlements, but ordinarily they are left as much without a court of first instance as if such courts had never been established.

Another drawback to the proper administration of justice in the province is due to the inability to secure competent justices of the peace. Except at Zamboanga there is no one continuous settlement of Filipinos sufficiently populous to justify the organization of a separate municipal government for the settlement, and at Zamboanga it has been necessary to include several distant settlements within the municipal limits. The municipalities of the province are very extensive, including more territory than is usually included in an entire province in other parts of the islands, but, save for small settlements scattered here and there, this territory is uninhabited. These settlements are often many miles distant from the seat of municipal government and very difficult of access. In view of these conditions, the Philippine Commission has provided by legislation for the appointment of justices of the peace for such settlement without regard to municipal limits, in order that the inhabitants thereof may not be compelled to travel prohibitive distances in order to appear before a justice. The inhabitants of these remote hamlets are primitive and ignorant, and it is usually impossible to find among them a man of sufficient education to qualify him for the position of justice of the peace, nor is the position so lucrative as to tempt better educated natives from Zamboanga or the other provinces to reside at such places. The result is that litigation in the justice of the peace courts of the province is in a very chaotic and unsatisfactory condition, nor does there seem to be any immediate remedy therefor. A handbook of instructions for justices of the peace, with printed forms for the transaction of all legal business coming before such courts, would be of aid in placing them upon a sounder basis.

Because of the conditions above set forth, the sparseness of the population, the vast distances, insufficient transportation, the undeveloped condition of the province, and the ignorance of the inhabitants, the administration of justice in the Moro Province can not be expected to be as satisfactory as it is in other parts of the islands where the population is dense and many of the natives have attained a high degree of civilization. In time, however, as education progresses, as the great natural wealth of the province is developed, and as the population increases it is natural to expect that conditions will steadily improve.

Very respectfully,

JOHN E. SPRINGER,
Attorney for the Moro Province.

The ATTORNEY-GENERAL, *Manila, P. I.*

EXHIBIT 3.

REPORT OF THE SUPERINTENDENT OF THE INSULAR COLD STORAGE AND ICE PLANT.

INSULAR COLD STORAGE AND ICE PLANT,
Manila, P. I., July 11, 1904.

DEAR SIR: I have the honor to hand you herewith a report of the operation of this plant for the fiscal year ending June 30, 1904.

By the terms of the contract with the Army for the fiscal year 1904, three cold rooms—in all, 127,254 cubic feet of space—were vacated. The plant was thus turned over to the undersigned with a revenue of ₱106,893.38 less than preceding years. In order to, as far as possible, overcome this reduction in the revenue, the working force of every department was materially reduced, except the engineers'. This I deemed it advisable, in the interest of the plant, to increase. Other economies were also practiced, but, on account of long accumulated leaves which had to be paid, and previous requisitions of the insular purchasing agent which could not be canceled, I regret to say I was unable to entirely overcome the large reduction referred to above.

During the month of May, 1904, room No. 5 was divided into three rooms—frozen room, chill room, and issue room—to meet the requirements of the sales commissary, and contracted for by the quartermaster May 21, 1904, at an annual rental of ₱30,000.

By authority of the honorable Civil Commission I have installed an additional freezing tank, which adds 18 tons of ice to the daily capacity of the plant. This tank meets the increased demand for ice and obviates the necessity of at times drawing ice which has not been properly frozen.

By authority of the honorable secretary of finance and justice, I have transferred to the bureau of coast guard and transportation one small steel lorch, which was not needed for the plant's business, and, in compliance with Executive Order No. 10, have transferred to the bureau of architecture all building material not needed at the plant, a list of which is attached hereto.

During this period I have had the entire rolling stock of the plant rebuilt, every machine overhauled, and the main building repaired and painted inside and out.

It gives me great pleasure that I am thus able to turn the entire property over to your honor in the best possible condition.

Very respectfully,

CHAS. G. SMITH,
Superintendent.

THE SECRETARY OF FINANCE AND JUSTICE,
Manila, P. I.

Articles of agreement for furnishing cold storage to the Subsistence Department, United States Army, by the insular government of the Philippine Islands.

This agreement, entered into at Manila, Philippine Islands, this first day of July, nineteen hundred and three, between Colonel E. B. Atwood, U. S. A., chief quartermaster, Division of the Philippines, of the first part, and the insular government of the Philippine Islands, of the second part,

Witnesseth, That the said Colonel E. B. Atwood, chief quartermaster, Division of the Philippines, for and in behalf of the United States of America, and the said insular government of the Philippine Islands, covenant and agree to and with each other as follows:

I. That the said insular government of the Philippines Islands shall, and by these presents does, hereby demise, let, rent, and lease to the United States of America rooms numbered 1-A, 1-B, 1-C, 2, 3, 4, 6, 7, and 8 in the insular cold storage and ice plant, Manila, P. I. (two hundred and ninety-nine thousand one hundred and nineteen cubic feet), to be used by the Subsistence Department, U. S. Army, for the storage of fresh meats and subsistence supplies, to have and to hold the same from the first day of July, nineteen hundred and three, to the thirtieth day of June, nineteen hundred and four, inclusive.

II. That the said insular government of the Philippine Islands agrees to maintain at all times in each of the rooms aforesaid such temperature as is required by the Subsistence Department, not less than eighteen degrees Fahrenheit, and to keep at all times in serviceable condition the loading and unloading devices, carrying rails, elevators, and scales appertaining to said plant, and to furnish the use, as well as the necessary mechanics to operate the same, free of charge whenever the devices can be used to facilitate and expedite the movement of stores in and out of cold storage.

III. That the insular government of the Philippine Islands shall furnish the insulated lighters and steam tug of the said insular cold storage and ice plant to receive ex-ship, Manila Bay, all fresh beef and mutton to be kept in cold storage for the Subsistence Department, but the said insular government shall not be required to furnish the labor, checkers, etc., necessary to bring the same to the scales or elevator at the outer doors of the cold storage side of the plant or to move the same from one room to another whenever necessary for the convenience of the Subsistence Department.

IV. That the insulated lighters and steam tug of the insular cold storage and ice plant shall be used to deliver fresh meat to transports in the harbor of Manila and to the Subsistence Department depot on the Pasig River; but the said insular government is not to be required to furnish the checkers and labor required for such services; the insular cold storage and ice plant to deliver the fresh beef, mutton, and other stores at the scales or foot of elevator, at the outside door of the cold storage rooms: *Provided*, That the insular cold storage and ice plant shall not be compelled to furnish its steam tug or insulated lighters for the transportation of beef or mutton to the U. S. transports or other Government vessels in the harbor of Manila when the quantity to be transported is less than one (1) ton.

V. The superintendent of the insular cold storage and ice plant shall receive from and give receipts to the Subsistence Department for the subsistence stores and fresh meat to be placed in cold storage when delivered at the scales or foot of elevator at the outer doors of the cold storage side of the plant, and the unit specified therein shall be the quarter of beef, specifying whether fore or hind quarter, the carcass of mutton, the box, and the crate. The receipt for boxes and crates will state their gross weight and the name of the stores "said to be contained therein."

VI. The Subsistence Department, through its authorized representative stationed at the insular cold storage and ice plant, shall receive from and give receipt to the insular cold storage and ice plant for all subsistence stores and fresh meat taken out of cold storage and delivered by the plant at its scales or foot of elevator at the outer door of the cold storage side of the plant.

VII. The management of the cold storage rooms aforesaid, the regulation of the temperature required by the Subsistence Department, and the operation of all machinery and plant used for producing cold and for transporting meat and other supplies from the river front to the rooms where they are to be stored, and for returning the same to the river front when needed, shall be under the control and management of the superintendent of the insular cold storage and ice plant.

VIII. That in case any beef, mutton, or other stores belonging to the Subsistence Department shall be lost by perils of the sea or marine disaster within the harbor of Manila while being transported to or from the insular cold storage and ice plant, the insular government shall not be liable for any loss or damage so sustained by the Subsistence Department.

IX. That in case the building belonging to the insular government, in which the cold storage space hereby leased is contained should be destroyed by fire, earthquake or typhoon,

or other casualty, or so materially injured by either of said causes that it becomes impracticable for the said insular government to complete this contract, this contract shall thereupon cease and be determined, without liability for damage on the part of either party: *Provided*, That in the event of an accident to the machinery or appliances, due to any imperfection in said machinery or appliances, or to the carelessness of the employees of the said insular cold storage and ice plant, which renders it impossible to maintain the temperature of the cold storage rooms at a degree of cold low enough to preserve the meat and other stores belonging to the Subsistence Department, the insular government shall provide cold storage elsewhere for said supplies, or pay to the Subsistence Department the money value of such of the said supplies as may be so damaged as to be unserviceable, the amount to be determined by a military board of survey.

X. That for and in consideration of the above covenants and agreements the United States shall pay to the said insular government of the Philippine Islands the sum of three and one-half cents ($3\frac{1}{2}$ cents) U. S. currency per cubic foot per month for all the cold storage space by this instrument leased.

XI. That payment shall be made at the end of each calendar month, or as soon thereafter as practicable at the office of the disbursing quartermaster at Manila, P. I., in the funds furnished for the purpose by the United States.

XII. That neither this lease nor any interest therein shall be transferred to any other party or parties, and in case of such transfer the United States may refuse to carry out this lease either with the transferer or the transferee, but all rights of action for any breach of this lease by the said insular government of the Philippine Islands are reserved to the United States.

XIII. That no Member of or Delegate to Congress, nor any persons belonging to or employed in the military service of the United States is, or shall be admitted to any share or part of this lease or to any benefit which may arise therefrom.

XIV. That this lease shall be subject to approval of the major-general, U. S. Army, commanding the Division of the Philippines.

In witness whereof the undersigned have hereunto placed their hands the date first hereinbefore written.

Witnesseth:

J. A. SCOTT as to

E. B. ATWOOD,
Assistant Quartermaster-General, U. S. A., Chief Quartermaster.

JAMES F. SMITH,
Acting Secretary Finance and Justice.

HEADQUARTERS DIVISION OF THE PHILIPPINES,
Manila, July 22, 1903.

Approved.

GEO. W. DAVIS,
Major-General, U. S. A., Commanding.

Articles of agreement for furnishing ice to the Subsistence Department, U. S. Army, by the insular government of the Philippine Islands.

This agreement entered into at Manila, Philippine Islands, on this tenth day of July, 1903, between Colonel Henry G. Sharpe, A. C. G., United States Army, for and in behalf of the United States of America, party of the first part, and the insular government of the Philippine Islands, party of the second part, witnesseth:

I. That the said party of the second part agrees to furnish as much ice per day as may be required by the Subsistence Department, United States Army, Division of the Philippines, not to exceed two-thirds of the capacity of the insular cold storage and ice plant owned and operated by the party of the second part, at Manila, which ice shall be pure and merchantable and made from distilled water, and shall be delivered at the following places: 1st, on the loading platform of the plant; 2nd, launches' side at plant's dock; 3rd, at wharf in front of the captain of the port's office; 4th, at ship's side, Manila Harbor: and the said party of the second part shall deliver ice at the places above enumerated without additional cost, and at such other places within the city limits of Manila as may be designated by the said party of the first part.

II. That the said party of the first part hereby agrees that for each pound of ice so delivered and received by the party of the first part it will pay fifty cents, United States currency, per one hundred pounds, to the party of the second part, payable monthly at the office of the depot commissary, Manila, Philippine Islands.

III. That this contract shall continue in force from the first day of July, 1903, to the thirtieth day of June, 1904, inclusive.

IV. That neither this contract nor any interest therein shall be transferred to any other party or parties, and in case of such transfer the party of the first part may refuse to carry

out this contract either with the transferrer or the transferee, but all rights of action for any breach of this contract by the said insular government of the Philippine Islands are reserved to the United States.

V. That no member of or delegate to Congress, or any person belonging to or employed in the military service of the United States, is or shall be admitted to any share or part of this contract or to any benefit which may arise therefrom.

VI. That this contract shall be subject to the approval of the commanding general, Division of the Philippines.
